PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

It may be seen from the tables that wholesale prices during the opening months of the year were generally speaking on the downward grade in Canada, Great Britain, India, New Zealand, the United States and in Austria, Germany, and the Netherlands. In other European countries, such as Belgium, France, Italy, Norway, Poland, Spain and Switzerland, and in China and Japan, prices displayed a tendency to rise. Retail prices and the cost of living were falling at the same time in Canada, Great Britain, India and the United States, and in Belgium, Finland, Denmark and Austria. Rising tendencies were shown by retail prices in France, Spain, Norway, Poland, Switzerland and Italy, and in Australia and South Africa.

Great Britain

WHOLESALE PRICES.—The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77) declined 1.1 per cent in February to 143.1 at the end of the month, as compared with 144.8 at the end of January. Foodstuffs declined 1.8 per cent, there being decided drops in prices of vegetable foods and sugar, coffee and tea, and a rise in prices in the animal food group. Materials declined 0.5 per cent, all groups showing slight declines.

The *Times* index number, on the base 1913=100, declined 1.6 per cent in February to 172.8. Foods declined 3.1 per cent, cereals declining 4.8 per cent, meat and fish 4.4 per cent and other foods 0.8 per cent. Materials declined 0.7 per cent. Cotton advanced 3.5 per cent and other textiles declined 4.9 per cent. Metals and other materials declined slightly.

The Board of Trade index number, on the base prices in 1913=100, declined 1.3 per cent in February to 168.8. Foods declined 1.8 per cent to 175.8, and non-foods declined 1.0 per cent to 164.9. Of the separate groups of foods, cereals and meat and fish declined and other foods advanced. Of materials, cotton advanced in price and all other groups declined.

The *Economist* index number (1901-05=100) for March declined 1.9 per cent from the

February level, reaching 212.7. Cereals and meat declined 4 per cent, other foods declined 3 per cent; textiles declined a fraction of one per cent; minerals declined 2.5 per cent and the miscellaneous group declined 0.6 per cent.

COST OF LIVING.—The official index number of the Ministry of Labour, on the base July, 1914=100, was 2.2 per cent lower at the beginning of April than at the beginning of March, the change being due to a decline in food prices. The April figures were as follows: food, 170; rent, 147; clothing, 230; fuel and light, 185; sundries, 180; cost of living, 175.

Austria

WHOLESALE PRICES.—The official index number of the Federal Statistical Office, on the base first half of 1914=1, was in comparison with the January index almost unchanged in February, being 21,081. Foods alone declined 1.2 per cent, and materials rose 1.9 per cent. From February to March the index number declined 2.5 per cent to 20,548.

COST OF LIVING.—The index number of the Cost of Living Commission, on the base July, 1914=1, rose one per cent in February to 13,895. Foods rose 1.2 per cent; clothing rose 0.5 per cent; heating and lighting rose 1.3 per cent; and rentals showed no change. In March the index number declined 2 per cent, and heating and lighting one per cent. Clothing and rentals showed no change.

Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, on the base April, 1914=100, declined 1.2 per cent in January, to 559. Declines were shown by fuels, tar and products, clay products, glass products, chemical products, fertilizer, fats, textile products, construction materials and rubber. Advances were shown by food products, metal products, and resin products, and other groups showed no change.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices of 56 articles at Brussels, on the base April, 1914=100, declined 1.3 per cent in February to 548. The index number for the Kingdom declined a fraction of one per cent to 517.

The official index number of cost of living of a middle class family on the base 1921=100, was 137.04 in February showing a decline of 1.5 per cent from the January level. This was owing to a decline in the price of foods. Rent, heat and light and sundries dropped slightly

and clothing advanced slightly. The official index number of cost of living of a working class family, on the base 1921=100, declined slightly in February to 139.45. All groups except clothing fell slightly.

France

WHOLESALE PRICES.—The official index number of *Statistique Générale*, on the base July 1914=100, rose 1.3 per cent to 525 in January, and was 526 in February. Foods rose 3.1 per cent in January, and industrial materials rose one per cent. Both these divisions remained at practically the same level in February, not much change being shown by any of the groups.

Germany

WHOLESALE PRICES.—The official index number of the Federal Statistical Office for gold prices, on the base 1913=100, declined slightly in February from its high level of January, reaching 136.5 as against 138.2, a decline of 1.2 per cent. Foods declined 1.7 per cent

to 135.0 and materials declined 0.4 per cent to 139.3, so that these two groups remained fairly close together. Goods produced declined 0.6 per cent to 129.1, and goods imported declined 0.9 per cent to 173.4, so that the latter group was still far in advance of the former.

COST OF LIVING.—After considerable discussion by the Index Number Committee, a body which includes representatives of employers and workpeople, a revised method of calculating the German cost-of-living index number has been adopted. In addition to food, light and fuel, clothing and rent, which have hitherto formed the basis of computation, account is now taken of such items as cleaning materials, educational and travelling expenses, etc., in calculating the present-day expenditure necessary to maintain the same standard of living as that enjoyed by a typical household before the war. Adjustments have also been made in regard to particular items of food and clothing, superior qualities being

now substituted for the cheaper articles taken as a standard during the "inflation" period. A re-investigation has also been made into the pre-war prices prevailing in all localities in which data are obtained for the calculation of the Reich index number.

The weighting of the budget after inclusion of travelling expenses and sundries with the items of the pre-war budget is as follows: food, 54.77 per cent; rent, 20.35 per cent; heat and light, 5.55 per cent; clothing, 10.05 per cent; travelling expenses, 3.07 per cent; sundries, 6.21 per cent.

The results for February according to the revised method show a cost-of-living index number of 135.6. According to the basis formerly adopted which included items of food, rent, heat and light and clothing, the February figure was 125.1. The new figures for the items contained in the earlier budget give 131.3 for February, which is 5 per cent higher than the figure according to the old method. According to groups the new index

for February is as follows: Cost of living, 135.6; cost of living exclusive of rent, 151.9; food, 145.3; rent, 71.5; heat and light, 138.0; clothing, 172.4; other necessities, including travelling expenses, 177.1; food, rent, heat and light and clothing, 131.3.

Owing to the present comparative stability in prices, it has been decided to resume the practice of publishing the index number once a month only. The practice (adopted during the inflation period) of publishing a weekly index number is therefore to cease.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan (base period, 1913=100), was 623.88 in February, an increase of 1.93 per cent on the figure for January. The only group to show a decline was animal foods. The total index reached its highest level since the compilation began (May, 1921), which was the case also with the groups vegetable foods, chemicals, minerals

and metals, miscellaneous vegetable products, and miscellaneous industrial materials. All foods rose during the month 2.1 per cent, and industrial materials rose 1.8 per cent.

COST OF LIVING.—The index number of cost of living at Milan, compiled by the city of Milan, rose 1.0 per cent in January to 129.32, on the base July 1920=100. The index number for foods rose 1.6 per cent to 129.37.

Poland

WHOLESALE PRICES.—The index number of the Central Office of Statistics, on the base pre-war prices=100, was 119.5 for January, as against 118.3 for December, an increase of one per cent. Wheat and vegetable products increased 38.0 per cent, and animal products declined 18.6 per cent. The groups metals and coal and building materials advanced

slightly in price, and hides and leather, textiles and chemical products declined slightly. The group colonial products and sugar showed no change.

COST OF LIVING.—The index number of the Central Office of Statistics, on the base 1914=100, was 150.8 in February, as compared with 150.0 in January. Foods and sundries rose slightly, clothing and fuel and light declined, and lodging and rates showed no change.

Spain

WHOLESALE PRICES.—The official index number compiled by the Director General of Statistics, on the base 1913=100, was 191 in January, as compared with 188 in December. Foods on the whole showed no change, as animal foods declined 4.3 per cent, vegetable foods advanced 2.7 per cent and other foods ad-

vanced 1.6 per cent. Industrial materials advanced 2.2 per cent, the principal change being an advance of 5.1 per cent in construction materials. Fuels and metals also advanced slightly and textiles and leather and chemicals declined.

RETAIL PRICES.—The official index number of retail prices at Madrid, on the base prices in 1914=100, declined 2 points in January to 188. Animal foods, vegetable foods and the fuel and sundries group all declined slightly.

China

WHOLESALE PRICES.—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, on the base 1913=100, declined 0.4 per cent, to 159.2 in February. Cereals and other foods declined, as did also metals, fuels and industrial materials. Textiles, building

materials, and sundries all rose during the month.

New Zealand

The official index number of the Census and Statistics Office, on the base 1909-13=1,000, declined 1.7 per cent from December to January, or from 1866 to 1835. The largest declines were shown by the groups, agricultural produce and wool, hides, tallow, butter and cheese. The index of the leather group also declined slightly as did that for general merchandise and crockery. Slight advances were shown by building materials and chemicals and manures, while coal and the group flour, barn, pollard and oatmeal remained at the previous month's level.

RETAIL PRICES.—The official index number of retail prices of food in 25 towns, on the base prices in four chief centres in 1909-13=

(a) Quarter beginning in specified month. (b) Average for year. (c) Figure for previous month. (d) Following month. index number (38 commodities) and all converted to base 1913=100. For 1920 and 1921, 76 quotations are included, and from

1,000, declined from 1,603 in December to 1,576 in January, or 1.6 per cent. Groceries and dairy produce declined while meat showed a very slight advance.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, rose from 160.0 in January to 160.6 in February. The principal change was an advance of 5.7 per cent in fuel and lighting. There was an advance of 1.9 per cent in building materials, and all other groups showed slight declines.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 com-

modities) showed a decrease at April 1 of one per cent from March 1, and 1.8 per cent from January 1, but was 8.1 per cent above the figure for April 1, 1924. During March eight groups of commodities declined, including breadstuffs, textiles and metals, in a marked degree, as well as fruits, hides and leather, coal and coke, oils and naval stores. Slight increases were shown by live stock, provisions, chemicals and drugs, and the miscellaneous group. Building materials showed no change.

Dun's index number (showing the cost *per capita* of a year's supply of commodities) was \$194,537 for April 1, a decline of 3.7 per cent from the previous month's level "Most of

the decline in the index number for April 1, as compared with that for March 1, occurred in breadstuffs, as was clearly foreshadowed by the violent break in grain prices. The figure for breadstuffs fell 16.1 per cent, to the lowest point touched since last July, and the net result for all foods together, despite advances in meats, dairy and garden products, and other food, was a reduction of 5.5 per cent. The total for the clothing group declined 2.7 per cent, largely because of lower prices for wool, and there was a moderate downward trend in metals and in the miscellaneous group."

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, Massachusetts, on the base 1913=100, declined 0.6 per cent to 142.8 in February. Clothing declined and fuel and light advanced very slightly. Shelter and sundries showed no change.

The index number of the National Industrial Conference Board, on the base July, 1914 =100, was 167 in January as against 166 in December. Foods and clothing rose slightly, and shelter, fuel and light and sundries showed no change.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Man Must be Stationed on Tender of Engine Running Backwards

THE Judicial Committee of the Privy Council, in a judgment handed down on March 30, allowed the appeal of the plaintiff in the case of Ouellette versus the Canadian Pacific Railway Company from a judgment of the Supreme Court of Canada last year. Ouellette was driving a lorry across the Canadian Pacific Railway tracks in Hull in 1922, when two engines that were being driven backwards struck his vehicle. Ouellette's two children, who were with him in the lorry, were killed, and in the action for damages which followed Ouellette was allowed \$3,000, which was later, however, reduced to \$1,500 on account of contributory negligence. The evidence given at the trial established that, at the time of the accident, there were two locomotives and two tenders running reversely, that the foremost of the two engines was pulling the hindmost engine and tender, and

that the driver of the foremost engine was prevented by the tender in front of his engine from seeing the motor truck until after the tender had struck it. The jury found against the railway company for not having a man stationed on back of the tender which was heading the train. The company contended that these two locomotives and tenders did not constitute a train, that the tender was part and parcel of the locomotive, and that section 310 of the Railway Act therefore did not apply. On an appeal by the company against this decision the Court of King's Bench at Montreal unanimously dismissed the appeal, and the company appealed to the Supreme Court of Canada, which sustained the appeal, two of the five judges of the Supreme Court dissenting. The plaintiff then asked for leave to appeal to the Privy Council, which was granted last July.

Their Lordships of the Judicial Committee were unable to agree with the company's con-

tention that two engines running as indicated do not constitute a "train" and therefore that no obligation rested on the company to have a lookout stationed at the foremost part. They could not hold that a "train" must necessarily include cars attached to the engine. The question was as to the interpretation of section 310 of the Railway Act of Canada, which reads as follows:—

"(310: (1) Whenever in any city, town or village, any train not headed by an engine is passing over or along a highway at rail level which is not adequately protected by gates or otherwise, the company shall station on that part of the train, which is then foremost, a person who shall warn persons standing on, or crossing, or about to cross the track of such railway."

Their Lordships remarked that it was in the least degree likely that the legislature intended, by a readjustment of certain forms of expression, to impair or undo a warning and protection given to the public at level crossings.

The decision of the Privy Council implies that the tender is a vehicle entirely distinct and separate from the engine, and that, con-

sequently, the railway company should have stationed a man on the rear thereof.

Railway Company.)

Employer Held Liable for Wrongful Act by Employee

THE LABOUR GAZETTE, July, 1924, contained the decision of the Supreme Court of British Columbia in an action brought by a passenger against the Canadian Northern Railway Company for damages for an assault made upon him by a conductor. The facts in this case may be recalled as follows:— The plaintiff, a coloured man, was a passenger on a train, and had duly paid his fare. The conductor, immediately after collecting his ticket violently assaulted him in an inexcusable manner, the evidence showing that the conductor had resented having the passenger call his attention to the fact that he had omitted to take up the latter's ticket when he took up those of the other passengers. The plaintiff's

claim was dismissed last year by the Supreme Court on the ground that the conductor's action was not within the scope of his employment or for the company's benefit, but was rather for the purpose of wreaking a private spite. The plaintiff subsequently appealed in the Court of Appeal against this decision, and the appeal was allowed, the Chief Justice, however, dissenting. One of the judges of appeal, in rendering judgment, after reviewing various precedents cited in the Supreme Court decision, said:—

"The happening was all incident to the taking up of the ticket. The assault was unprovoked by the plaintiff. The plaintiff upon his part acted throughout in a proper manner, and a wanton assault is perpetrated by the servant of the company, whose duty it is to protect the plaintiff from injury, at the very moment the plaintiff hands over his ticket to the conductor. It would seem to me to be idle argument to contend that upon such a state of facts as we have here there is no liability upon the defendant; its contractual obligation was to carry the plaintiff, exercising due care."

As against the precedents quoted by the trial judge to support the view that no liability rested upon the Company for the wrongful act of its servant in this case, the same appeal judge quoted the opinion of Lord Lindley, in an Australian appeal to the Judicial Committee of the Privy Council, as follows:—

"Although the particular act which gives the cause of action may not be authorized, still if the act is done in the course of employment which is authorized, then the master is liable for the act of his servant."

(*British Columbia—Jennings versus Canadian Northern Railway Company.*)

Hernia Compensable as an Industrial Disease

Two cases were tried recently in the Province of Quebec in which workmen were awarded compensation under the Workmen's Compensation Act for hernia contracted in the course of their employment. The Canadian Pacific Railway Company was the defendant in both these cases. In the first, which was heard in the Superior Court at Montreal, the plaintiff was shown to have been ruptured while carrying heavy weights and running a hand-truck in the Company's Angus Shops, with the result that he became permanently unable to perform his full duties as formerly. The Company claimed that the workman had been predisposed to hernia, and that it was not caused by any accident that occurred during his employment at the shops. The Court found that as the workman had been suddenly attacked by hernia while at work, the attack should be treated as an industrial accident. The workman was awarded \$713.58 with interest and costs, this

amount being based on a degree of disability estimated at 15 per cent of his earning power.

The second case was heard by the Court of King's Bench in appeal. The claimant, as in the preceding case, was employed in the Angus Shops, where, in November, 1923, he was ruptured while in the act of lifting a heavy weight. He had sustained a similar injury five years before while working for the same company. For the defence it was alleged that the claimant was constitutionally predisposed to such an attack. The Court held that the plaintiff had been the victim of an accident within the meaning of the Compensation Act, the hernia having resulted from a definite act. That he had been ruptured previously was held to be an irrelevant circumstance.

(*Quebec—Emer versus Canadian Pacific Railway, and Gauthier versus Canadian Pacific Railway.*)

Employer is Responsible for the Safety of the Place of Work

A freight conductor on the Canadian Pacific Railway, when his train reached a yard which was one of its regular inspection points, proceeded to inspect his train and was running beside it while still in motion, at the same time attempting, according to the approved practice, to release a sticking brake. While so engaged he struck his foot against some object lying beside the track, and was thrown down, receiving severe injuries to his leg. He brought action for damage against the company for negligence in permitting such an obstruction in its yards. The jury before whom the case was first tried found that the defendant had been guilty of negligence in not having sufficiently inspected the yards, and awarded damages against the employer. The company appealed against this decision, the evidence which had been given at the trial having been conflicting as to the existence of a stone, alleged by the plaintiff to have been the object on which he had tripped. The section men were positive that no such stone had been seen; the members of the train crew on the other hand stated that they had seen the stone immediately after the accident, and the station agent said he saw a stone next day and had thrown it in a ditch. The Court of Appeal dismissed the appeal with costs, on an equal division of the Court. It was held by the Court that if a plaintiff can show that a duty rests upon a defendant to ensure the safety of a place of work, and if in fact the place is dangerous, though under the management and control of the plaintiff, he has by such showing given sufficient reason for shift-

ing to the defendant the onus of proof in regard to the alleged negligence.

(*Saskatchewan—Brass versus the Canadian Pacific Railway Company.*)

Kansas Court of Industrial Relations Declared Unconstitutional

The Supreme Court of the United States unanimously decided, on April 13, that the compulsory system of arbitration enacted into law by the Kansas legislature when it created the Kansas Court violated the rights guaranteed both to employer and employees under the federal constitution. The court held that the Kansas legislature had no authority to pass a law permitting an employer, even in an industry affected by a public interest, to remain in business, whether making or losing money, if he did not wish to do so, and that there was a similar lack of legal authority in the legislature to compel an employee to work for an employer, if he desired to seek employment elsewhere.

The decision of the Federal Supreme Court reversed that of the Kansas Supreme Court which had upheld the Industrial Court by granting a writ of *mandamus* to compel the Charles Wolff Packing Company to put into effect an order regarding wages and hours of labour in the company's slaughtering and packing plant.

An earlier action involving the validity of the Kansas Court Industrial Relations law was outlined in the *LABOUR GAZETTE* for April, 1924, page 306, and numerous references to the Court have been made in other issues.

Normal Running of Plant shows that no Strike Exists

A foundry company in Wisconsin, U.S.A., was convicted of having advertised for labour without stating at the same time that a strike was in progress. The company appealed in the State Supreme Court, claiming that at the time the advertisement was published the plant had been operating normally with *bona fide* employees. The Supreme Court reversed the decision of the lower court, declaring that "the defendant might at the time of the ad-

vertisement be lawfully justified in considering that a strike shall be deemed at an end when conditions are such that the business of the employer is not materially affected by it, and there are no reasonable grounds for believing that a continuance thereof will materially affect his business." In Massachusetts and other States, state boards of arbitration cease to function when they find that the business of the employer concerned is "being carried on in the normal and usual manner and to the normal and usual extent." Some States, including Wisconsin, New York, Pennsylvania, South Dakota and North Dakota, require employers and workmen to file statements as to the existence or non-existence of a strike, this information to be given to persons seeking employment at public employment offices.

Pennsylvania Old Age Pensions Unconstitutional

The State of Pennsylvania, by an Act of May, 1923, set up a board of Old Age assistance commissioners, and provided that old age pensions should be awarded, on application, to persons 70 years of age, who had been citizens of the United States for fifteen years, whose total property was \$3,000 or less, and whose income from all sources was less than \$1 a day. Certain citizens brought action to restrain enforcement of this act on the ground that it conflicted with section 18, article III of the state constitution, which reads:—

"No appropriations, except for pensions or gratuities for military services, shall be made for charitable, educational or benevolent purposes, to any person or community, nor to any denominational or sectarian institution, corporation or association."

A decree enjoining the enforcement of the act was sustained by the Supreme Court of the State, the judgment stating:—

"If the legislature may call persons with an income of \$365 per year and property of \$3,000 paupers, there is no reason why subsequent legislatures could not so define persons with property and income of double, treble or quadruple those figures. In other words, in appropriating money, the minute the historical definition of poor persons is broken through, the act enters the field of forbidden legislation through section 18 of article 3, and fails as a poor law."

[NUMBER 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly summary

Employment conditions in Canada showed improvement during the month of March in comparison with the previous month. The general level of employment, however, was less favourable than during the same month last year. Reports from the Employment Service of Canada indicated an increase over the preceding month in the volume of business transacted, the average number of vacancies recorded daily being 10 per cent higher than in February, and the placements effected 7 per cent higher. At the beginning of April the percentage of unemployment among members of trade unions was 8.5, as compared with 9.5 per cent at the beginning of March and with 6.7 per cent at the beginning of April, 1924. These percentages are calculated from reports received from 1,550 local trade unions, with 154,558 members. Reports from 5,830 firms showed that they were employing 718,524 persons on April 1, as compared with 718,162 persons on March 1. The employment index number, which is based on the number of workers employed on January 1, 1920, as 100, stood at 87.2 on April 1, 1925, as compared with 87.0 in the previous month, and with 89.3 on April 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.56 at the beginning of April as compared with \$10.74 for March; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined to 156.5 for April as compared with 161.6 for March; 151.1 for April, 1924; 156.9 for April, 1923; 155.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; and 198.1 for April, 1919.

The time loss caused by industrial disputes was somewhat greater in April than either in the previous month or in April last year. Twelve disputes were in progress at some time during the month, involving 11,-

951 employees, and resulting in a time loss of 290,633 working days. These figures include the continued dispute in the coal mines of Nova Scotia, where 11,463 miners were reported to be involved. Corresponding figures for March 1925 were as follows: fifteen disputes involving 11,729 employees, and resulting in a loss in working time of 244,703 days; and for April, 1924, sixteen disputes, 8,667 employees, and 199,968 working days.

Amendments to Industrial Disputes Act.

The bill to amend the Industrial Disputes Investigation Act, the text of which was given in the March issue of this GAZETTE, completed its passage through the House of Commons on May 13. It will be recalled that the purpose of the bill is mainly to define the application of the Act in respect of matters on which the Dominion has unquestioned jurisdiction. Some changes were made in the amending bill as originally introduced, to the effect that employers and employees would be required to give at least thirty days' notice of an intended or desired change affecting wages and hours, and that in case a dispute should arise it would be unlawful to declare a lockout or strike until a board under the Act has dealt with the dispute. Another of the changes would provide that an employer declaring a lockout, or making effective a change in wages contrary to the provisions of the Act, would be liable to a fine of not less than one hundred and not more than one thousand dollars for each day the lockout exists.

The changes in the amending bill are identical with the proposed amendments which received the approval of the House at the session of 1924.

British family settlement in Canada

The Department of Immigration and Colonization has made very tangible progress to date under the 3,000 British family settlement agreement consummated last fall between the Imperial authorities and the Dominion Government under the provisions

of the Empire Settlement Act. During the recent spring months 288 families, including 1,728 persons, have arrived in Canada and been settled on their farms. The scheme provides for the settlement of 3,000 selected British families on Government owned farms in Canada under the supervision of the Land Settlement Branch of the Department. The Imperial Government is furnishing an average of £300 per family for the purchase of necessary live stock and farm equipment for the new settlers. Selection of suitable families in the Old Country is being conducted by experienced land settlement officials under the supervision of the Director of Emigration. On arrival at Canadian ports the groups of families are met by departmental officials and directed to their destination, where they are met by the resident field supervisors of the Land Settlement Branch and taken to their farms. A good feature of the British Family Settlement plan is the local community welcome which is being extended to families on arrival at destination. The newcomers reach their farms to find the home in order, fire going and meal prepared. Employment with neighbouring farmers is arranged beforehand for the head of the house and working members of the family, as the Settlement plan provides for the acquiring of one year's Canadian farming experience before the new settlers commence active operation of their own farms.

It is too early to make any definite forecast of the ultimate success of this assisted Settlement Scheme but with the care that is being exercised in selection and the placement of the families on farms in this country, this colonization project is, in the opinion of the responsible officials, apparently conducted on sound lines.

Immigrant children as wards of the province

At a recent conference on Child Welfare at Regina a resolution was passed asking that immigrant children should be made wards of the Province of Saskatchewan. Legislation to this effect is already in force in Manitoba and Alberta, prohibiting the placing of immigrant children in these Provinces without a permit. The Manitoba law on this subject is contained in the Child Welfare Act, 1922, chapter 2, as follows:—

90. (1) An organization or agent desiring to carry on the work of placing immigrant children in the province, prior to placing in the province any immigrant child, shall secure from the Lieutenant-Governor in Council authority by order in council for such organization or agent to carry on such work and shall deposit with the Department of Public Welfare the sum of five hundred dollars, or furnish satisfactory security for that amount.

(2) Such authority may be revoked by the Lieutenant-Governor in Council and such sum or a portion thereof, on the retirement of the organization or agent from such work or on the dissolution of the organization, may be returned.

91. When any immigrant child is placed in the province by any organization or agent, such immigrant child shall be enrolled as a ward of the province, and the organization or agent shall furnish the director with information in such form as may be prescribed by departmental regulations in that behalf.

The Canada Year Book for 1924.

The Canada Year Book, 1924, a substantial volume containing over 1,000 pages, has been issued recently by the Dominion Bureau of Statistics. The Year Book is the official statistical annual of the physiography, history, institutions, population, production, trade, transportation, finance, labour, administration and general social and economic conditions and life of the Dominion.

Section VII of the volume contains full information on the subjects of labour, wages and prices, including the latest available figures regarding the occupations of the people of Canada, which are analyzed according to distribution by sex, industry, locality etc. Information is also given on several of the outstanding Dominion and Provincial activities in the interest of labour, together with details regarding labour organizations, and statistics of recent industrial fatalities, strikes and lock-outs, employment and unemployment in Canada. Rates of wages are shown for the various classes of labour, with index numbers, and samples of the actual wages paid and number of hours worked in the various industries. The movements of prices, wholesale and retail, are also shown for 1924 and previous years.

In the present edition the new features to which special attention may be directed include the following: a summary treatment of natural resources in the physiography section; a discussion of the effect of redistribution in the sub-section on parliamentary representation; a summary of the literacy and school attendance statistics collected at the census of 1921; improvements in the treatment of vital statistics; an expanded article on fruit production and a discussion of the cost of grain production in the sub-section on agriculture; a description of the rise and present position of cotton manufacturing and automobile manufacturing in Canada; an analysis of Canadian external trade at the commencement of the trade and commerce section; an analysis of the child labour legislation of the provinces and a detailed description of the methods used in compiling the Bureau's new index number of wholesale prices, in the labour,

wages and prices section; a new table showing *per capita* ordinary receipts and expenditures of provincial governments for various years since 1881; and the first analysis by provinces of the national wealth of Canada. The education section includes articles dealing with the activities of the Royal Society of Canada and the Royal Canadian Institute, while the sub-section on public health and benevolence, commenced in the last edition, has been expanded into a section, filling a long-experienced want for information on Canadian charitable institutions. In the administration section, new statistics are presented, showing the growth of the civil service of Canada since 1912. A charge of \$2 is made for the Year Book, which may be obtained from the Department of Public Printing and Stationery, Ottawa.

Inter-provincial co-operation in technical education

Attention is called to the report of the recent inter-provincial conference on vocational education which is included in the notes on this subject in the present issue. The conference was called last month by the Director of Technical Education, who is in charge of this branch of the work of the Federal Department of Labour for the purpose of securing co-operation among the four western provinces in regard to vocational training. It was pointed out that the provinces would secure a considerable saving in the cost of providing courses of training if they would consent to combine their efforts and make common use of the existing facilities for training. Under the Technical Education Act, the Dominion is responsible for half the outlay for instruction, the provinces paying the remaining half. If, however, the provinces would co-operate, their shares severally would be one-eighth instead of one-half the total cost, since the cost of training would not be much greater for four provinces than for one. It was also suggested by the delegates that as all the provinces set up certain standards, to which electricians, engineers, miners and other workers must conform, they owed it to those who desired to enter these trades that the necessary facilities for training should be provided in their own province. A committee appointed by the conference is to consider in what manner any difficulties to co-operation may be overcome, and the way thus prepared for the further development of vocational education in the western provinces. A full report of the conference will be published shortly by the Department of Labour as a bulletin.

Administration of Dominion compensation

The Manitoba Act amending the Workmen's Compensation Act, outlined elsewhere in this issue, provides that "the Board may administer any act of the Parliament of Canada, or Order of the Governor General in Council dealing with the payment of compensation to the persons named in any such Act or Order in Council." This amendment meets, as far as Manitoba is concerned, the requirements contained in section 1, of Chapter 15 of the Statutes of Canada of 1918, relating to compensation for the employees of the Dominion Government, which reads as follows:—

An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same Boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other Board, officers or authority or by such court as the Governor in Council shall from time to time direct.

Ten-dollar Government annuities

A bill to amend the Government Annuities Act of 1908 was introduced in the House of Commons by the Minister of Labour early in May. The minimum annuity that formerly could be purchased under the act was \$50, and the proposed amendment would permit the purchase of a \$10 annuity. The Minister stated that the reason for suggesting this change was that a number of employers desired to purchase outright annuities of amounts about \$10 as presents or bonuses for employees who have been with them for many years. For some time past, he said, the Department of Labour has had on deposit from one firm a considerable sum of money in anticipation of the amendment being made.

There are three plans under which single cash payments may be made for the purpose of securing an annuity:—Under plan "A," in event of death before 65, the purchase money with 4 per cent compound interest will all be returned to the purchaser or his legal representatives. After 65, annuity ceases with the last payment received by the annuitant prior to his death. Under plan "B," in case of death before the annuity begins, there will be no return of any part of the purchase money. Under the "10-year guaranteed plan," in event of death before 65 the purchase money with 4 per cent compound interest will be returned. If the annuitant lives to be 65 the

annuity will be paid in any event for 10 years, and will be continued as long thereafter as he may live.

Supposing the annuitant to be 45 years of age an annuity of \$10 could be purchased under plan "A" for \$40.25, under plan "B" for \$25.88, and under the "10-year guarantee plan," for \$47.80.

Administration of minimum wages in Ontario

The Minimum Wage Board of Ontario recently made their report to the Provincial Government in connection with their investigation last winter into certain charges that had been made against the Willard Chocolate Company. It had been alleged that this firm had practised a system of underpaying their female employees and circumventing the orders of the Board (LABOUR GAZETTE, February, 1925). The Board found as the result of their inquiry that there had been no plan for systematic underpayment. "If the Company had planned to systematically underpay its employees the question naturally arises, why did it continue to pay comparatively high wages to so many of them? Surely, its first step would have been to cut the higher wages to the minimum levels prescribed by law, a policy which would have been legally safe, rather than to embark upon the highly dangerous policy of reducing those wages which the law protected. Further, the guaranteed rates which the company gave its piece-workers are inconsistent with a policy of ruthless wage reduction. Their removal would have saved the company a considerable sum each pay day."

The report then continues: "The Board is not disposed to excuse any company for the underpayment of a single wage. A woman's wage is her living, and those whose earnings are low need every cent to sustain them in decent conditions of life. We believe that an efficient business establishment such as Willards' should be able to avoid errors of this sort in its payroll. The Company has argued that Cyril Johnson, as their time-keeper, was responsible for these errors. Our reply is that the Company is responsible for its subordinate officials. We believe that our work in protecting the living standards of working women is one which employers should approve, and we believe that we enjoy the friendly co-operation of the great mass of the employers of the province. In these circumstances we look to them to conserve their human as well as their physical assets, and to observe our orders as assiduously as they maintain insurance, promote sales, or safeguard their finances."

Nature of 8-hour basic day on railways.

The United States Railroad Labour Board gave a decision recently on the question whether a railway company has the right to increase the daily assignment above the standard working day of eight hours, either temporarily or permanently, except in cases of emergency. The question had been raised when the Nashville, Chattanooga and St. Louis Railway informed its maintenance-of-way employees and shop labourers that their regular assignment would be increased to ten hours. The employees contended that eight consecutive hours constituted the day's work, and that the assignment of longer hours, except in cases of emergency, involved the abrogation of the benefits of the eight hour day. The company, on the other hand, contended that the eight-hour day had only been established as the basic day for pay, and that it had the right to extend the working day to ten hours if necessary. The Board held that the eight-hour day had been established as a standard measure of a day's work for the class concerned, and that the hours beyond this basic day are to be considered overtime. They recognized, however, the right of the carrier to work its forces nine, ten, or even a greater number of hours, should the occasion arise to justify such an assignment, provided that the meaning and intent of the general rule is adhered to. They considered further that it was not right for a railway company to issue a notice to the effect that a ten-hour day would be established for a given period, and that if the occasion should arise requiring a ten-hour working day the notice should be to the effect that two hours' overtime would be worked in addition to the regular assignment.

Resolutions by legislatures of Manitoba and Alberta

Resolutions on the situation resulting from the dispute in the mining industry of Nova Scotia were recently passed by the Legislatures of Manitoba and Alberta.

The resolution, passed by the Manitoba Legislature on April 8, was as follows:—

"Whereas a condition of great distress exists among many thousands of people in the coal fields of Nova Scotia; and whereas the people in all parts of Canada are shocked that a condition of this kind should be allowed to continue without intervention on the part of Governments to avoid so much human suffering. Therefore be it resolved that this House do make representations to the Federal Government urging them to immediately grant such relief as is necessary to meet the needs of those destitute people; and further, that the Government be urged to establish a Commission of Enquiry that would place the blame for these appalling conditions where it belongs, and make such recommendations as would prevent a recur-

rence of these disasters; and further, that copies of this resolution be sent to the Right Honourable Premier Mackenzie King and to the Minister of Labour, the Honourable James Murdock."

The Alberta resolution, passed April 10, was in the following terms:—

Whereas, both in the House of Commons at Ottawa and in the Public Press, statements have been made regarding the appalling conditions prevailing among the Nova Scotia miners, and the hunger and suffering being endured by thousands of families in that area; and whereas, due to the continued strife between the British Empire Steel Corporation and its employees, this state of unsatisfactory conditions will be continued unless action is taken by the Federal Government to probe the reasons for the continued industrial disturbances; therefore, be it resolved, that this Legislature is of the opinion that immediate relief should be extended by the Federal Government in order to alleviate the suffering now existing there, and also that a Commission be appointed to make a complete and comprehensive enquiry as to the reasons for these conditions and the placing of the blame therefor, and that a copy of this resolution be forwarded to the Right Honourable Mackenzie King, Premier of Canada, and the Minister of Labour, Ottawa.

Alberta asks reevaluation of soldiers' lands

The Alberta Legislature on April 3, unanimously passed a resolution requesting the Federal Government to consent to a revaluation of the land, stock and equipment of the returned soldiers who were settled upon Alberta lands under the policy adopted by the Federal Government in 1918 in connection with the re-establishment of soldiers as civilians. Many of these ex-soldiers have been obliged to abandon their farms in consequence of the decline in the value of farm property after they took possession. A similar resolution by the Manitoba Legislature was noted in the March issue of the GAZETTE (page 252). The Alberta resolution was as follows:—

"That this House reaffirm the resolution adopted by this Legislature, March 22, 1922, in effect that soldier farmers, located by the Soldier Settlement Board, are justly entitled to a revaluation of their land, stock and equipment, on the basis of the cost of replacement, and based on such a valuation to a proper and equitable readjustment of the amount due from them to the Soldier Settlement Board; such readjustment of payments to equitably adjust past payments as well as payments accruing.

Further, that this Government not only continues to urge upon the Federal Government the importance and necessity of such action, but that in the interest of the state it pledges all reasonable co-operation and assistance in facilitating the bringing about of this reform in as far as the Province of Alberta is concerned."

Workmen's compensation in Manitoba

An outline of the amendments recently made by the Manitoba Legislature in the Workmen's Compensation Act is given elsewhere in this issue. These amendments embody most of the recommendations of the Special Committee which was engaged during the recess

in a study of the whole subject with the object of making the act satisfactory to all parties. The committee's report was given in the March issue of this GAZETTE. It will be recalled that the committee consisted of five representatives of employers, five representatives of employees, and five members of the Legislature. While they were unable to agree upon some of the more contentious issues they agreed in making certain recommendations which they hoped would result, if adopted by the Legislature, in ensuring a period of tranquility in the operation of the act. The Hon. R. W. Craig, attorney-general of the Province and Chairman of the committee, stated later in the legislature that his experience with this committee impelled him to emphasize the value of deliberations of such joint committees in settling differences in which employers, employees and the general public are involved.

The agreement reached by the members of the committee was based on the assumption that no additional burden should be placed upon industry, but that the existing scale of benefits should be adjusted in some particulars. The principal adjustment they recommended was a reduction in the minimum weekly allowance to dependent families consisting only of children from the existing minimum rate of \$15 to \$12.50. They suggested that the saving thus effected might be used for the purpose of increasing the allowances to dependent children on a scale corresponding to that in the Alberta Act (LABOUR GAZETTE, May, 1924, page 377) and this change was made by the amending act. The existing rate of disability compensation was allowed to stand at 66½ per cent of former earnings, in the case of total disability, and at the same proportion of the difference between former and present earnings in cases of partial disability. The original demand of the employees was for an increase of 75 per cent in these rates, and that of the employers was for a reduction to 55 per cent. The employers had also asked that a maximum liability in connection with any accident should be fixed in the act, but the committee made no recommendation on this point. An important section was added to the act, similar to an Ontario amendment last year, providing for vocational retraining of injured workmen who are unable to follow their regular occupations in consequence of their injuries.

Industrial development in Manitoba

The account given in the present issue of recent labour legislation in Manitoba mentions that the Legislature made a substantial contribution towards the work lately begun by the Winnipeg Development Com-

mittee. This body was formed during the past winter primarily for the purpose of finding some solution for the problem of unemployment. It was composed of representatives of the Building Trades Council, and of the Winnipeg City Council and Board of Trade. Their investigations led them to the conclusion that unemployment could only be remedied satisfactorily by means of industrial development in the city and province. They proposed therefore to undertake a survey or census of the resources of the province showing the extent of the existing production in the various classes of industry, the number of employees, the capital invested, markets and other material of interest to prospective manufacturers. The committee further proposed the establishment of a permanent Industrial Development organization under control of an industrial commissioner to keep the survey up-to-date, and to endeavour to bring in new industries where they can be established with advantage to the province. The organization is to make a sustained effort for a period of three years. The cost of the undertaking is estimated at about \$30,000 yearly; the funds being controlled by an executive committee representing the contributors, including the Provincial Legislature, the City Council, and the business interests throughout the province.

Trade union political levy in Great Britain A bill was introduced in the British House of Commons last February by a private member, to amend the law relating to the raising and application of funds by trade unions for political purposes. The bill would have repealed certain sections of the Trade Union Act, 1913, which provided for a political fund being established by trade unions to which each member of the union would be liable to contribute by reason of membership unless exemption was claimed in writing. By the provisions of the bill members of a trade union were to be freed from all liability to contribute to any levy for political purposes, but any member who desired to contribute to his union's political fund could do so with complete freedom. Registered and unregistered trade unions were to be placed on the same footing and safeguards were introduced to prevent any of the benefit, strike, or other funds of a trade union from being used for political purposes.

The bill was rejected by the House after an appeal for industrial peace had been made by the Prime Minister, Mr. Baldwin, in the following terms:

"We have our majority. We believe in the justice of this bill which has been brought in to-day, but we are going to withdraw our hand, and we are not going to push our political advantage home at a moment like this. Suspicion is preventing stability in Europe, and is the one poison that is preventing stability at home, and we offer the country to-day this. We, at any rate, are not going to fire the first shot. We stand for peace. We stand for the removal of suspicion in the country. We want to create an atmosphere in a new parliament for a new age in which the people can come together. We abandon what we have laid our hands to. We know we may be called cowards for doing it. We know we may be told that we have gone back on our principles, but at this moment we believe we know what the country wants, and we believe it is for us in our strength to do what no other party can do at this moment, and to say that we, at any rate, stand for peace."

The Minister of Labour of Great Britain, replying **in trade dispute** to a question in the House **in Great Britain** of Commons in March, made the following statement of the general policy of the Government in regard to intervention in trade disputes:—"So far as intervention by the Ministry is concerned," he said, "it is the policy of the Department not to intervene in a dispute where effective joint machinery exists unless and until that machinery has broken down or has failed to effect a settlement. In practice, officials of the Ministry are generally in touch informally with the parties if circumstances are such that a trade dispute of any importance may seriously be apprehended. Premature action on my part, whether in inviting parties formally to meet me to discuss the situation or in taking the procedure elaborated in the Industrial Courts Act, is open to the same objection in either case, namely, that the certainty or even the strong likelihood of early intervention would impair the value of existing machinery for negotiation between the parties themselves."

The provisions of the Industrial Courts Act of 1919, to which reference is made in the foregoing statement, are already well-known. In providing arbitration facilities the aim of the Industrial Courts Act appears to be to give the parties as wide a choice as possible in respect to the kind of tribunal to which the difference shall be submitted. Under the Act a difference may be referred to the Industrial Court, or to one or more persons appointed by the Minister of Labour, or to a Board of Arbitration formed *ad hoc* consisting of one or more persons nominated by the employers and a similar number nominated by the workmen, and an independent chairman nominated by the Minister. The Industrial Court consists of about thirteen persons. Of these, four, including the President, are designated as independent persons,

others as representing employers, others as representing workmen, while two members are women. It is not the practice for the whole Court to hear any one case. The usual procedure is for each case to be heard by a division of the Court, consisting of the President or a chairman as an independent person and other members representing employers and representing workmen respectively. If women are, or are likely to be, affected, a woman member is also usually added. This system is subject to variation with circumstances, and cases are not infrequent where a member of the Court will sit alone. The constitution of a division of the Court is in the discretion of the President. The members of the Court are appointed by the Minister of Labour and the aim in constituting the Court was to create a body, which it was hoped would inspire general confidence in respect of its ability, knowledge, and representation of different points of view. The president and chairmen are all persons who had no active participation in industry. Three are of the legal profession and one was formerly a distinguished civil servant. The description of other members as "representing employers" and "representing workmen" is applicable rather to the matter of antecedents and previous experience than to function and attitude. The Court is entirely an independent tribunal, and is not subject to any Government or departmental control or influence. It sits mainly in London, but from time to time it sits also in the industrial centres of England, Scotland, Ireland, and Wales. In addition to its judicial functions, the Court has certain advisory or consultative duties. The Minister of Labour may refer to it for advice any matters relating to, or arising out of, any trade dispute or any other matter which in his opinion ought to be so referred.

Arbitration by the Industrial Court rests upon an entirely voluntary basis. Both parties to a difference must agree to the reference to the Court, and the award or finding of the Court depends for its observance upon the honour and civic sense of the parties.

The City Council of Halifax, Nova Scotia, are considering the question of establishing the double platoon system in the fire department. The firemen represented that under the existing system they were obliged to remain on duty for periods of 96 hours, with no opportunity of enjoying the comfort of home. The 2-platoon system has been established by Provincial laws in Ontario, British Columbia, and Alberta.

The Attorney General of Ontario recently received a deputation from railway companies in the Province who complained of the continuance of disability allowances under Workmen's Compensation to employees who had been injured, even after these employees had resumed employment at full pay. They claimed that men who had recovered from a disability sufficiently to do full work should be required to waive further compensation. Railway employees who were present at the interview represented that although a man might be strong enough to draw full pay there could be no certainty that he could work as continuously as though he had not been injured. It was stated that a further conference on this subject was to be held.

According to a recent statement in the House of Commons the average mileage operated under the Canadian National Railway System in 1924 was 20,523; the average number of employees was 87,213; and the average number of employees per 100 miles was 425. Corresponding figures for the Canadian Pacific Railway were 13,784 miles, 57,471 employees and 416 employees per 100 miles.

The total number of cases of poisoning, anthrax and epitheliomatous and chrome ulceration in Great Britain and Northern Ireland reported under the Factory and Workshop Act during March, 1925, was 62; 37 were cases of lead poisoning, 3 cases of other forms of poisoning, 6 cases of anthrax, 11 cases of epitheliomatous ulceration, and 5 cases of chrome ulceration. Seven deaths were reported during the month, all due to epitheliomatous ulceration. In addition, seven cases of lead poisoning among house painters and plumbers were reported to the Home Office, but notification of these cases is not obligatory.

The number of workpeople, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland during March, 1925, was 203 (excluding 38 men entombed in the Montague View Colliery) as compared with 203 in the previous month and 231 a year ago.

During March the number of assisted passages to Canada from Great Britain to Ireland, which were granted under the Empire Settlement Act of 1922, was 1,611. During the first three months of 1925, 3,517 passages were granted. The number of actual departures during the same quarter was 2,450. From 1922 to the end of 1924 the departures totalled 11,623. These figures include the applicants and their dependents.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

THE conditions of employment in Canada during March showed improvement in comparison with the previous month, but were not so good as in the same period last year.

The employment situation at the end of April, 1925, was reported by superintendents of the Employment Service of Canada to be as follows:—

In the Maritime Provinces the employment situation showed the good effects of the return of clement weather conditions. Farm work was opening up, and fishing was fairly active. In the logging industry, though river driving was held up in some places through shortage of water in the streams, in other localities it was proceeding and creating considerable employment activity. Construction prospects were reported as fair, but work had not yet opened up to any considerable extent. Sawmills and manufacturing allied with the lumbering industry were busy, while the steel industry was only fairly active; other manufacturing lines were quite active. The continuance of the strike in the Nova Scotia coal districts continued to reduce activity in that industry to such work as is carried on by the independent collieries. Transportation, both in Nova Scotia and New Brunswick, was reported as being fairly good.

In the Province of Quebec industrial conditions were gradually improving. There was a keen demand for farm hands, created by the spring work on the farms. River driving caused a good demand for workers in the logging industry. In Montreal factories generally showed quite substantial improvement, though in the City of Quebec the improvement was not so noticeable. Construction and building were beginning, and fairly good prospects for the forthcoming summer were foreseen.

From Ontario a noticeable improvement was reported. This was due not only to the opening up of outdoor work, but also to increased activity on the part of manufacturing industries situated in the southwestern portions of the province. This latter improvement was most noticeable in the steel industry. A good demand for farm hands throughout the province generally was experienced as a result of the usual spring activity. While in some districts construction had not yet shown any very considerable activity, generally speaking work was being started and prospects were fair. In the northern section of the province outside work was slower in getting under way with the result

that a few centres reported a shortage of employment opportunities. The opening of navigation on the Great Lakes may be considered a factor contributing to the general improvement.

Farming in Manitoba was held up by rain and inclement weather conditions. For this reason the demand for farm help slackened, but was expected to become brisk when work on the land recommenced. From Winnipeg building prospects were reported as being substantially improved over last year, and at outside points outdoor work was opening up. There were, however, still many applicants for general labour throughout the province, particularly in Winnipeg.

In Saskatchewan the farming situation was similar to that in Manitoba. Work on the land had to be delayed owing to unfavourable weather, and this was reflected by a slackened demand for farm labour. Building construction was quiet, though railroad construction and section work opened up to some extent and provided quite a number of general labourers with employment. The continued heavy farm placements had decreased the lists of unemployed substantially throughout the province.

From certain points in the Province of Alberta it was reported that farming activities had been interfered with by the weather, but an active demand for farm hands was still in evidence. Farming generally throughout the province appeared to be very active. Railroad construction was under way in numerous localities, but other construction was quiet, with prospects uncertain. The coal mining industry was very quiet, but factories were active, and in some cases their activities showed increases.

In British Columbia the logging industry showed only minor changes, but still reported a fair amount of activity. Though no expansions in the metal mining industry were reported, that industry continued to be active. Nearly all centres where manufacturing is of any considerable proportions reported that factories were quiet. Both building and railroad construction began to open up some little time prior to the end of the month, and a number of general labourers found work on extra gang and section work. From most centres it was reported that there was still plenty of labour of all classes to satisfy any anticipated demands, but in summarizing the situation for this province it would appear that there has been quite a considerable decrease in previously existing unemployment.

**EMPLOYERS'
REPORTS.**

Employment on April 1 increased slightly in contrast with the downward movement that has been indicated on this date in the past four years. The employment index number was rather lower than on April 1, 1924. Manufacturing showed marked improvement, but there were pronounced seasonal losses in logging. Other industries reported gains on the whole.

In the Maritime Provinces, Quebec and British Columbia increased activity was indicated, while the situation in Ontario and the Prairie Provinces was not so favourable. In the Maritime Provinces there were increases in manufacturing and shipping and stevedoring, but railway operation and construction afforded less employment. In Quebec, there was improvement in manufacturing, mining, building and trade, while logging registered decided reductions and the railways showed curtailment. In Ontario, pronounced recovery in manufacturing and gains in mining, communication, construction, transportation, services and retail trade were offset by heavy losses in logging. In the Prairie Provinces also there were large contractions in logging. Construction and manufacturing, however, showed increased activity. In British Columbia, manufacturing reported improvement, but in logging and construction there were declines.

Montreal, Quebec, Toronto and Winnipeg recorded additions to staffs, while in Ottawa, Hamilton and Vancouver there was little change in the situation. In Montreal, manufacturing, transportation, construction and trade showed the greatest gains. Construction in Quebec City afforded more employment than in the preceding month. Leather factories, on the other hand, reduced their personnel. In Toronto, manufacturing was decidedly more active, especially in the textile, iron and steel divisions; trade, communication and construction also registered improvement. In Ottawa, there was practically no change in the general situation. Employment in Hamilton also remained stationary on the whole. There were increases in textiles, iron and steel, with counterbalancing losses in clay, glass and stone and electrical appliance works. Firms in Winnipeg recorded a favourable trend, manufacturing and construction showing the largest gains. Manufacturing in Vancouver reported improvement, while there were offsetting reductions on road construction.

Manufacturing made further important gains, notably in iron and steel, lumber, textiles, clay, glass and stone, pulp and paper and rubber. Logging, on the other hand, showed very marked seasonal losses. Quarrying and

asbestos mining were more active. Communication, transportation, construction and maintenance, services and trade recorded improvement.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of April, 1925.

**TRADE
UNION
REPORTS.**

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The volume of unemployment at the end of March as reported by 1,550 local trade unions with 154,558 members was less than at the close of the previous month, 8.5 per cent of the members being out of work as compared with 9.5 per cent in February. The situation, however, was somewhat less favourable than in March of last year when 6.7 per cent of the members were reported idle. Nova Scotia, New Brunswick, Ontario, Manitoba and British Columbia unions registered improvement over February but the gains were not particularly outstanding. In the remaining provinces declines occurred. In the manufacturing industries reports were received from 425 unions with a membership of 42,246 persons, 4,302 of whom were out of work, a percentage of 10.2 as compared with 9.7 per cent in February. Pulp and papermakers, printing tradesmen, metal polishers, textile, iron and steel, jewellery and wood workers and hat makers were all better employed. Glass and garment workers were considerably less active, and reductions on a smaller scale were reported by cigar makers, bakers, and leather workers. The improvement shown in the coal mines of Nova Scotia during March was due to the fact that some unions in February reported a number of their members out of work, while in March they were on strike, and therefore, in accordance with the statement in the first paragraph of this article, they were shown as fully employed in the March tabulation. The Alberta coal miners were not so active as in February and the British Columbia miners reported a nominal change only. Asbestos miners in Quebec registered no unemployment. The situation in the building trades was more

favourable than in February, due to the commencement of the active building season. Reports were received from 167 unions of building and construction workers with 17,386 members, 22.5 per cent of whom were idle, as compared with 26.1 per cent in February and with 26.4 per cent in March of last year. Bricklayers, masons and plasterers were considerably better employed than in February, and lesser gains were reported by carpenters and joiners, hodcarriers, steam shovel and dredge-men and granite cutters. Less favourable conditions prevailed in the remaining trades, especially among painters, decorators and paper-hangers, and bridge and structural iron workers. Transportation workers reported a slight increase in employment over February, 5.4 per cent of the members being idle as compared with 5.9 per cent in February. Navigation workers were busier than in February and employment for steam railway workers was also in greater volume. Street and electric railway employees, however, registered moderate declines. Conditions were much improved for navigation workers during the period under review than at the close of March last year, and street and electric railway employees also were better employed, but less work was afforded steam railway employees. Retail clerks were scarcely as active as in February though considerably busier than in March of last year. Slightly more unemployment than in February was reported by fishermen. Lumber workers and loggers were not so slack as in February, though a large number of their members continued to be without work. In the miscellaneous group of industries there was more activity; hotel and restaurant employees, theatre and stage employees, barbers and stationary engineers and firemen were all more fully engaged.

A summary of unemployment as reported by trade unions during the quarter ending March 31, 1925, appears elsewhere in this issue.

During the month of March, 1925, the offices of the Employment Service of Canada made 23,420 references to vacancies and effected a total of 22,130 placements, of which 13,862 were in regular employment and 8,268 were in casual work; this total is in contrast with a total of 22,523 placements during March, 1924. Of the placements in regular employment 10,817 were of men and 3,045 of women workers. Applications for work were received from 38,028 workers, of whom 28,690 were men and 9,338 were women, while during March, 1924, the number of applications was 34,897. Em-

ployers notified the Service of 24,510 vacancies, of which 16,766 were for men and 7,744 were for women. This compares with 26,104 opportunities for work during March, 1924. A comparison of the reports for this period with those of the preceding month shows a marked increase in the number of placements effected. This increase was general throughout Canada, and was due partly to seasonal activity in the farming industry. A comparison of March, 1924, however, shows that the volume of business transacted was slightly larger than during the month under review. A report in detail of the work of the offices for the month of March, 1925, and for the quarterly period January to March may be found elsewhere in this issue.

The Dominion Bureau of Statistics reports that the production of pig-iron in Canada in March was 63,932 long tons, this being the highest monthly output reported since May, 1924, exceeding the combined totals of January and February of this year. The increase over February was 117 per cent, and over January 121 per cent. The entire March output consisted of basic iron, 63,740 tons being for the further use of the reporting firms and the balance of 192 tons being for sale. The cumulative production of pig-iron for the first quarter amounted to 121,740 tons, as compared with 201,280 tons for the first three months of 1924, and consisted of 97,736 tons basic iron, 15,722 tons foundry iron and 8,282 tons malleable iron. The number of active furnaces remained unchanged at five, located as follows: 2 at Sydney, Nova Scotia; 2 at Sault Ste. Marie, Ontario; and one at Hamilton, Ontario. These furnaces have a combined capacity equal to 41.3 per cent of the possible Canadian output, and were operated at 99.4 per cent of their rated capacity during March. The output of 1,962 tons ferro-alloys marked an increase of 10 per cent over the 1,780 tons of February. The total production this year amounted to 3,433 tons, and consisted mostly of the grade containing 80 per cent manganese; a small quantity of ferro-silicon was also produced.

The production of steel ingots and castings in Canada during March was 107,605 long tons, this being the greatest tonnage reported for any month since May, 1924, which was the highest production since October, 1920. In February of this year the output was 37,221 tons, the tonnage of March showing an increase of 189 per cent. For the first three months of the year the cumulative production was 171,952 tons or slightly below the 207,224 tons for the same period of last year.

A report from the Department's correspondent at Cobalt shows that 8 cars containing 641,070 pounds of silver ore were shipped from the Cobalt camp during the first eighteen days of April as compared with 17 cars of silver ore containing 1,348,560 pounds in the entire previous month. The Nipissing mine shipped 265 bars containing 306,131.56 ounces of silver, and The Mining Corporation of Canada shipped 171 bars containing 171,072.17 ounces of silver, making a total of 456 bars containing 477,223.73 ounces of silver shipped during the month of April as compared with 441 bars containing 475,537.89 ounces shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of March, 1925; Intercolonial Mining Company, Limited, 17,756 tons; Greenwood Coal Company, Limited, 5,217 tons. The mines of the Acadia Coal Company, Limited, were inoperative because of a strike.

As complete figures showing coal production in Canada for March are not yet available, the statistics for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch shows that 456,662,656 feet of timber, board measure, was scaled in the province during April, 1925. The total includes fir, 90,497,150 feet; cedar, 48,642,101 feet; spruce, 13,179,263 feet; hemlock, 20,071,029 feet; balsam, 4,586,898 feet; yellow pine, 676,841 feet; white pine, 1,601,691 feet; jack pine, 384,878 feet; larch, 2,109,361 feet; and miscellaneous, 231,837 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement amounted to \$18,233,944 during March, 1925, as compared with \$16,486,042 in the previous month and \$20,669,619 in March, 1924.

The gross earnings of the Canadian Pacific Railway were given in a preliminary statement as \$12,931,547 for March, 1925, as compared with \$11,786,711 for February and \$14,812,928 for March, 1924.

Coal Statistics for February.—The output of coal from Canadian mines during February decreased 22 per cent below the production for the preceding month, and remained below the average for the same month in the past five years. The figures were 1,156,349 tons in February, as against 1,488,654 tons in January, while compared with the average for the month during the five preceding years, the decrease was 14 per cent, or 180,769 tons. Pro-

duction by provinces in February, when compared with the five-year average for the month, showed an increase in Saskatchewan and decreases in New Brunswick, Nova Scotia, Alberta, British Columbia and Canada. The total number of men employed in the coal mines of Canada during February was 29,449, of whom 22,830 worked underground and 6,619 on the surface, as compared with a total of 30,700 in January, of whom 23,787 worked underground and 6,913 on the surface. Production per man was 39.3 tons in February, as against 48.3 tons per man in January; but during February the production per man-day was 2.5 tons, as compared with 2.6 tons in January.

BUILDING PERMITS AND CONTRACTS AWARDED

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in March in sixty cities throughout Canada showed a substantial increase as compared with February, but was lower than the value of the permits issued in March, 1924. The figure for March, 1925, was \$8,457,791; for February, 1925, \$5,781,642; and for March, 1924, \$9,365,070.

For the month of April the total value of contracts awarded in Canada, as compiled by MacLean Building Reports, Limited, were \$24,886,900, as compared with \$13,392,900 in the previous month. Residential building accounted for 43.5 per cent of the April total, amounting to \$10,829,000. Business building totalled \$6,991,700, or 28.1 per cent; industrial building \$2,472,500, or 9.9 per cent; and public works and utilities \$4,593,700, or 18.5 per cent. The activity was distributed among the provinces as follows: Ontario, 50.3 per cent; Quebec, 32.7 per cent; Prairie Provinces, 6.6 per cent; British Columbia, 6.3 per cent; and the Maritime Provinces, 4.1 per cent.

The *MacLean Building Review* also gives the construction awards during the period from 1913 to 1924. In 1913 the contracts awarded amounted to \$384,157,100, the highest during the entire period. During the war years the amount of the awards fell, the lowest figure being \$83,916,900 in 1915. A noticeable change was shown, however, in 1919, when the contracts awarded totalled \$190,028,300. Since that year the yearly values of the contracts awarded have been \$255,605,500 in 1920; \$240,133,300 in 1921; \$331,843,800 in 1922; \$314,254,300 in 1923, and \$276,261,100 in 1924.

FOREIGN
TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in March, 1925, the merchandise entered for consumption amounted to \$84,608,314 as against \$86,922,203 in March, 1924. The domestic merchandise exported amounted to \$94,815,802 in March, 1925, as compared with \$67,274,543 in February and \$92,429,774 in March, 1924. Foreign merchandise exported amounted to \$1,072,334 in March, 1925, and \$1,185,528 in March, 1924.

The chief imports in March, 1925, were: fibres, textiles and textile products, \$18,898,252; iron and its products, \$15,940,214; agricultural and vegetable products, mainly foods, \$11,748,886; and non-metallic minerals and products, \$10,505,277.

The chief exports in the same month were: in the groups of wood, wood products and paper, \$26,603,516; agricultural and vegetable products, mainly foods, \$25,921,991; animals and animal products, \$13,982,673; and non-ferrous metals and their products, \$11,386,386. During the year ending March, 1925, exports of agricultural and vegetable products, mainly foods, were valued at \$400,001,876; wood, wood products and paper, \$254,030,016; animals and animal products, \$164,821,510; and non-ferrous metals and their products, \$90,855,514.

Strikes and Lockouts

The time loss due to industrial disputes was greater in April than in March, 1925, or April, 1924. There were in existence during the month 12 disputes, involving 11,951 employees, and resulting in a time loss of 290,633 working days, as compared with 15 disputes in March, involving 11,729 workpeople, and resulting in a time loss of 244,703 working days. In April, 1924, there were recorded 16 disputes involving 8,667 employees and resulting in a time loss of 199,968 working days. Three new strikes and lockouts commenced during April with a time loss of 3,258 working days. Five of the strikes and lockouts commencing prior to April, and one of the strikes and lockouts commencing during April terminated during the month. At the end of the month, therefore, there were six strikes and lockouts on record affecting 11,745 workpeople, not including those strikes and lockouts in which employment conditions are reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices were lower due chiefly to a seasonal decline in the price of eggs.

The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.56 at the beginning of April as compared with \$10.74 for March; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. Fresh eggs showed a substantial decline while there were less important declines in the prices of bread, flour, rolled oats, and potatoes. Increases occurred in the prices of beef, fresh and salt pork, bacon, lard, cheese and coffee. Including the cost of fuel and rent with that of foods the total budget averaged \$20.82 at the beginning of April as compared with \$21 for March; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$25.34 for April, 1920; \$26.92 for July, 1920 (the peak); \$20 for April, 1918; and \$14.32 for April, 1914. Fuel was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined substantially, being 156.5 as compared with 161.6 for March; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; and 198.1 for April, 1919. In the grouping according to chief component material five of the eight main groups were lower, two were higher and one was unchanged. Vegetables and their products were substantially lower due chiefly to lower prices for grains, flour and other milled products and fresh vegetables. Animals and their products were lower because of declines in the prices of butter, eggs, fish, furs and hides which more than offset the advances in live stock and meats. Declines in the prices of wool and silk caused a fall in the fibres, textiles and textile products group. Cotton thread, raw jute, binder twine and manilla rope advanced. Lower prices for pig iron, steel billets and wire nails caused a decline in the iron and its products group. Non-ferrous metals were also lower. The non-metallic minerals and the chemicals and allied products groups were somewhat higher. The wood and wood products group was unchanged.

The Minister of Education of Saskatchewan recently announced that, in order to provide educational facilities in the frontier settlements, the Department had decided to establish "The Outpost Correspondence School" for the purpose of serving children living beyond the borders of organized school districts. The various courses will include the work for Grades I to VIII inclusive.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

DURING the month of April the Department received an application for the establishment of a Board of Conciliation and Investigation from certain employees of the Corporation of the City of Edmonton, Alberta, being junior clerks, stenographers, typist clerks, cardwriters and extension clerks, members of Civil Service Union No. 52. After

the application was received it was understood from information reaching the Department, that the matter in dispute which related to the scale of wages of the employees concerned, had been amicably settled, and no need existed therefore for the establishment of a Board as requested.

STRIKES AND LOCKOUTS IN CANADA DURING APRIL, 1925

THE number of strikes and lockouts in Canada in existence during April was twelve, as compared with fifteen in March. The time loss for the month was greater than in April, 1924, being 290,633 working days, as compared with 199,968 working days in the same month last year. The considerable time loss and number of employees in April, 1925, was chiefly due to a dispute of coal miners in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
April, 1925.....	12	11,951	290,633
March, 1925.....	15	11,729	244,703
April, 1924.....	16	8,667	199,968

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Nine disputes, involving 11,561 workpeople, were carried over from March. Five of the strikes and lockouts beginning prior to April, and one of the strikes and lockouts commencing during April terminated during the month. At the end of April, therefore, there were on record six strikes and lockouts as follows: coal miners in Nova Scotia; cigar-makers at Montreal; hat and cap makers at Toronto; fur workers at Montreal; fur workers at Toronto, and carpenters, joiners and machine operators at Montreal. The record does not include minor disputes as described in the previous paragraph, nor does it include any

dispute which the union or organization concerned has not yet called off, although information has been received indicating that employment conditions are no longer affected thereby. Information is available as to five such disputes, namely, clothing workers (ladies' garment makers), Montreal, commencing February 3, 1925; clothing workers (ladies' garment makers), Toronto, February 9, 1925; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924, and street railway employees at St. John, June 29, 1921.

The strike of 250 street railway men on June 29, 1921, at St. John against a decrease in wages and changes in working conditions has not been called off, but the places of the strikers were filled some time after the cessation of work occurred. The union has continued to pay strike benefits to the strikers who had not secured work elsewhere. At the end of April, 1925, none were reported as receiving strike pay and the strike, therefore, is considered to have lapsed.

An article on another page of this issue refers to a shut-down of a coal mine at Hillcrest, Alberta, on March 20, declared by the miners to be a lockout to enforce a decrease in wages, with similar occurrences at other mines.

Of the disputes which commenced during April, two were against reductions in wages, while the third was for increased wages and changes in working conditions. Of the strikes and lockouts which terminated during the month, five were in favour of the employers, and one was in favour of the employees.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, EDMONTON, ALTA.—A cessation of work, affecting 140 coal miners, occurred in Edmonton on April 20, following the announcement in two mines by the employing operator of a reduction of 13 per cent in the wages scale in the agreement then in force. The miners struck against it as the

agreement had still two months to run. On April 22, the operators notified the miners that they were willing to resume work at the rates in effect prior to the cessation and work was resumed April 23.

Society, for relief in cases of ill-health in the colliery districts. On April 10, John L. Lewis, International President of the United Mine Workers of America, had a conference with the Hon. E. H. Armstrong, Premier of Nova

STRIKES AND LOCKOUTS DURING APRIL, 1925

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to April, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Nova Scotia.....	11,463	286,575	Commenced March 6; failure to agree on certain changes in agreement of wages and working conditions, and stoppage of credit at company's stores. Unterminated.
MANUFACTURING— Tobacco and liquors: Cigarmakers, Montreal, Que...	7	175	Commenced March 24, against a reduction in wages. Unterminated.
Clothing, including knitted goods: Hat and cap makers, Toronto, Ont.	9	225	Commenced March 3, for changes in working conditions. Unterminated.
Boots and shoes (other than rubber and felt): Boot factory employees, Montreal, Que.	7	Commenced February 26, for increased wages. Information received indicates strikers secured work elsewhere.
Fur and leather products (other than boots and shoes): Fur workers, Toronto, Ont....	16	400	Commenced February 20, for recognition of the union. Unterminated.
Saw and planing mills: Shingle sawyers, New Westminster, B.C.	14	Commenced March 3, for increased wages. Information received indicates employment conditions no longer affected.
Iron, steel and products: Moulders, Hamilton, Ont.....	17	Commenced January 30, against a reduction in wages. Information received indicates employment conditions no longer affected.
Moulders, Owen Sound, Ont...	22	Commenced January 19, against a reduction in wages. Information received indicates employment conditions no longer affected.
Moulders, Sarnia, Ont.....	6	Commenced March 3, against a reduction in wages. Information received indicates employment conditions no longer affected.
(b) Strikes and lockouts commencing during April, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING— Coal miners, Edmonton, Alta...	140	420	Commenced April 20, cessation of work following announcement of reduction in the wage scale in the agreement in force. Work resumed April 23, at rates in effect prior to cessation of work.
MANUFACTURING— Fur and leather products (other than boots and shoes): Fur workers, Montreal, Que...	75	1,875	Commenced April 1, failure to agree on certain changes in agreements and on proposed substitution of separate agreements. Unterminated.
Wood products: Carpenters, joiners and machine operators, Montreal, Que.	175	963	Commenced April 24, against a reduction in wages. Unterminated.

COAL MINERS, NOVA SCOTIA.—The dispute affecting the coal miners in Nova Scotia, carried over from March, remained unsettled at the end of the month. Early in April the Government of Nova Scotia placed \$20,000 at the disposal of the Nova Scotia Red Cross

Scotia, and then spent some days in the Cape Breton mining districts. On April 14 and 15, the premier and members of the Government had a conference with the International president, the district officers of the union, and the officers of the coal company, and again

on the 18th and 19th. At the latter conference the premier proposed an immediate resumption of work at the mines on the 1924 wage scale pending a settlement by direct negotiations, or by arbitration if the negotiations failed. The premier's suggestion was accepted by the miners' representatives but was rejected by the president of the company. The conference then broke up. Toward the end of the month the premier proposed a ten per cent reduction of all classes of miners receiving over \$4.50 per day under the 1924 rates, the rates for the lower paid employees to remain as they were. This proposal was rejected by both parties. Following the return of the president of the United Mine Workers of America to Indianapolis strike relief for the district was authorized and paid at the rate of \$5,000 per week from April 6, one month after the cessation of work. On April 30, Premier Armstrong introduced legislation in the Nova Scotia House of Assembly to prevent and settle strikes and lockouts. During May this legislation passed both houses of the legislature. Reference to this legislation is made elsewhere in the present issue of the LABOUR GAZETTE.

BOOT FACTORY EMPLOYEES, MONTREAL, QUE.—The strike of seven boot factory employees which began on February 26, against a reduction in wages, lapsed by the end of April as the strikers secured work elsewhere and employment conditions were no longer affected.

FUR WORKERS, MONTREAL, QUE.—A strike of 75 fur workers in the employ of three firms occurred on April 1, following the refusal of

the employers to renew a wage agreement which expired January 31, or to sign a new one which involved an increase in wages of 15 per cent. Following the breaking off of negotiations several employees were discharged who refused to sign individual contracts with the firms on the same basis as prevailed during the past two years. At the end of April this strike remained untermiated.

WOOD WORKERS, MONTREAL, QUE.—A strike of 175 carpenters, joiners and machine operators in sash and door factory occurred against a reduction in wages of from 10 per cent to 15 per cent. The men had been receiving from 28 cents to 70 cents per hour for a 50-hour week. At the end of the month this strike remained untermiated.

MOULDERS, HAMILTON, ONT.—In regard to the strike of moulders which occurred in January at Hamilton against a reduction in wages of ten per cent to take effect January 30, information received in the Department indicates that employment conditions are no longer affected.

MOULDERS, OWEN SOUND, ONT.—Information received in the Department concerning the strike of moulders at Owen Sound which commenced January 19, against a reduction of five per cent in wages, indicates that the strikers' places have been filled and that employment conditions are no longer affected.

MOULDERS, SARNIA, ONT.—In regard to the strike of six moulders which began at Sarnia on March 3, against a reduction in wages of five per cent, information received indicated employment conditions no longer affected, the places of the strikers having been filled.

Recent Labour Laws in Chile

On September 8, 1924, the first law regulating child labour in Chile was enacted. This law prohibits the employment of children under 14 years of age in commercial and industrial establishments employing 10 or more workers, except that children between 12 and 14 years of age who have completed the required school course of four years may be admitted to certain kinds of work to be determined by later regulations. The law prohibits night work for children under 16 in the regulated occupations and establishes an 8-hour day and 48-hour week for children between 14 and 18. Employment of children under 18 in certain dangerous occupations is prohibited. Children under 18 who have re-

ceived no primary instruction must be allowed at least two hours daily, out of the legal working day, to attend school. The new law also prohibits the employment of women in harmful or dangerous occupations and provides that they shall be entitled to a vacation of 40 days before and 20 days after childbirth.

Another law enacted on the same date, establishing compulsory insurance of workers against sickness and industrial accidents, provides for medical aid to women workers during pregnancy and confinement and for cash benefits amounting to 50 per cent of the regular wage during the first three months after childbirth and of 25 per cent of the regular wage as long as the mother nurses her baby.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING MARCH

THE British *Ministry of Labour Gazette* for April contains the following table which analyses the disputes in progress in March, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in March			Number of workpeople involved in all disputes in progress in March	Aggregate duration in working days of all disputes in progress in March
	Started before Mar. 1	Started in Mar.	Total		
Mining and quarrying.....	4	13	17	9,000	41,000
Metal, engineering and shipbuilding.....	6	8	14	5,000	22,000
Textile.....	6	6	12	1,000	5,000
Paper, printing, etc.	1	2	3	16,000	55,000
Building, decorating, contracting, etc.....	6	3	9	1,000	6,000
Other.....	2	23	25	12,000	32,000
Total, March 1925.	25	55	80	44,000	161,000
Total, Feb. 1925...	20	44	64	13,000	85,000
Total, March 1924..	21	59	80	76,000*	730,000*

* A dispute involving about 39,000 tramway and omnibus employees in London accounted for nearly half of the time lost in March, 1924.

Of the 55 disputes beginning in March, 20, directly involving 11,000 workpeople, arose out of demands for advances in wages; 9 directly involving 3,000 workpeople, on other wages questions; 9, directly involving 5,000 workpeople, on questions respecting the employment of particular classes or persons; 9, directly involving 3,000 workpeople, on questions of trade union principle; and 7, directly involving 1,000 workpeople, on other questions. The remaining dispute, which directly involved 15,000 workpeople, was an extension of the dispute in the bookbinding industry in London which began on February 23. In addition about 2,000 workpeople were involved, either directly or indirectly, in 25 disputes which began before March and were still in progress at the beginning of that month.

Settlements were effected in the case of 37 new disputes, directly involving 25,000 workpeople, and 10 old disputes directly involving 1,000 workpeople. Of these new and old disputes, 15, directly involving 5,000 workpeople, were settled in favour of the workpeople; 12 directly involving 3,000 workpeople, in favour of the employers; and 20, directly involving 18,000 workpeople, were compromised. In the case of 8 disputes, directly involving 1,000 workpeople, work was resumed pending negotiations.

COMBINES INVESTIGATION ACT, 1923

THE Dominion Government has appointed J. C. McRuer, Assistant Crown Attorney, Toronto, to act as general prosecutor in connection with the combine in the distribution of fruit and vegetables which was investigated by Commissioner Duncan, who found that the Nash combination of jobbing and brokerage houses is a combine which is operating and has operated detrimentally to the interests of the Canadian public. The interim report of the Commissioner was outlined in the March issue of this GAZETTE.

The Combines Investigation Act provides as follows:—

"26. (a) Every one is guilty of an indictable offence and liable to a penalty not exceeding ten thousand dollars or to two years' imprisonment or if a corporation to a penalty not exceeding twenty-five thousand dollars, who is a party or privy to or knowingly assists in the formation or operation of a combine as defined in this Act.

(b) No prosecution for any offence under this section shall be commenced, otherwise than at the instance of the Solicitor General of Canada or of the Attorney General of a province."

Section 25 of the Act enables the Dominion Government to initiate prosecution proceedings provided no action is taken by the provinces concerned. In this case the Attorneys-General of British Columbia, Alberta, Saskatchewan and Manitoba have requested the Federal authorities to institute proceedings and have offered their co-operation therein.

A Federal Royal Commission in Australia, appointed to inquire into national health and insurance, has recommended the establishment in the Commonwealth of a national health scheme and a compulsory system of national insurance providing for the payment of sickness, invalidity, to maternity and superannuation benefits. The commission considers that equitable arrangements whereby definite benefits may be guaranteed to all insured members is only possible under Government control and supervision.

NOVA SCOTIA "INDUSTRIAL PEACE ACT, 1925"

THE Nova Scotia legislature, towards the close of its late session, gave its approval to a bill introduced by the Premier, the Honourable E. H. Armstrong, under the title, "The Industrial Peace Act, 1925." Its purpose is mainly to create machinery for the settlement of industrial disputes in connection with the mining industry and public utilities similar to that provided for Canada under the provisions of the Industrial Disputes Investigation Act, the latter act having been found by the Judicial Committee of the Privy Council to be *ultra vires* of the Dominion Parliament in regard to some of its provisions. The Industrial Peace Act is divided into two parts: the first part is, in the Premier's words, "simply the re-enacting of the Lemieux Act (the Industrial Disputes Investigation Act)." The second part goes beyond the Dominion Act, and will not take effect before proclamation by the Governor in Council of the Province; it contains features stated by the Premier to be patterned after the compulsory arbitration law of New Zealand and the Act establishing the Kansas Court of Industrial Relations. It provides for the establishment of a permanent arbitration commission with judicial powers, which is to investigate and render decisions, enforceable by law, in disputes where conciliation proceedings have failed.

The Industrial Peace Act repeals the Conciliation Act of 1903, the Miners' Arbitration Act of 1890. (The provisions of these two acts were outlined in the supplement to the March issue of the LABOUR GAZETTE, entitled "Government Intervention in Labour Disputes in Canada.")

Conciliation and Investigation

The provisions contained in sections 1 to 70 of the Act are practically identical with the provisions of the Industrial Disputes Investigation Act, 1907, with certain differences due to the fact that it is a Provincial rather than a Dominion measure. The following paragraphs contain a summary of those sections providing means for conciliation and investigation. The act is to be administered by the Minister of Works and Mines.

An "employer" under the act is "any person, firm or corporation employing for hire or reward ten or more persons in any minor industry, or who is a public utility within the meaning of the Public Utility Act, employing for hire or reward ten or more persons in any business, trade, undertaking, calling or employment in respect of which such public utility is subject to the Public Utility Act."

Employees are not to cease to be regarded as employees under the act when they go on strike, or in case of dismissal, provided application for a board is made within 30 days after dismissal. By an amendment made to the bill as at first introduced an "industry" under the act means "any mining industry, or any business, trade, undertaking, calling or employment in respect of which the employment is subject to the Public Utility Act".

The definition of "disputes" is identical with that in the Dominion Act, covering disputes relating to wages, hours, conditions, etc.

Provision is made for Boards of Conciliation and investigation, as in the "Lemieux Act." Either party to a dispute may apply to the Minister for a Board, and the Minister, if satisfied that the provisions of the act apply, is to establish the Board within fifteen days. Boards will consist of three members, one to be appointed on the recommendation of the employer, one on that of the employees, and the third member (the chairman) on the joint recommendation of the first two members, or by the minister himself, if no such joint recommendation is forthcoming. Similar procedure is required also for the reference of disputes to Boards, the applications, as under the Dominion Act, to be accompanied by full particulars regarding the dispute, and by a statutory declaration that a strike or lockout is expected by the applicant failing adjustment of the dispute. Such applications must be made with the knowledge of the other party to the dispute, and the other party may send a counter-statement to the registrar under this Act.

The functions and powers of Boards and the procedure they are to follow are the same as those of the Boards under the Dominion Act. Boards are to examine fully the circumstances surrounding disputes and to use their good offices towards an amicable settlement in each case. They will present their reports to the Minister who will have them published in the *Royal Gazette* of the Province, and if necessary, distributed to the press.

The Boards under the act have full powers in regard to summoning of witnesses, taking evidence under oath, etc. A Board, or any member of a Board, has authority to enter any premises where work connected with a dispute is carried on, and any person offering obstruction to such inquiries is subject to a penalty up to \$100. Parties to a dispute may have a representative before the Board, by whose acts they are bound, but they are not to employ lawyers, except by general consent

of all parties and of the Board. The Board's hearings must be held in public. The remuneration of the Board is the same as for Boards under the Lemieux Act, namely \$20 for each day a hearing lasts, with expenses, the members being forbidden to accept any perquisites.

The only compulsory feature under the first section of the Act, as in the Industrial Disputes Investigation Act, is contained in the provision that strikes or lockouts must not be begun prior to or pending a reference to a Board, but cessations of work apart from strikes or lockouts are not included in this prohibition.

"Employers and employees are required to give at least 30 days' notice of an intended change affecting conditions of employment with respect to wages or hours; and in the event of such intended change resulting in a dispute, until the dispute has been finally dealt with by a Board, and a copy of its report has been delivered through the Registrar to both the parties affected, neither of those parties shall alter the conditions of employment with respect to wages or hours, or on account of the disputes do or be concerned in doing, directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute."

Penalties are provided if either party makes an unfair use of the foregoing provision to cause delay, or alter the conditions of labour contrary to its provisions.

An employer declaring a lockout contrary to the act is subject to a penalty from \$10 to \$1,000 for each day, and similarly an employee going on strike is liable to a fine from \$10 to \$50 a day.

A special provision, also contained in the Dominion Act, allows for agreements by mutual consent of the parties to a dispute, if made in writing and forwarded to the registrar, that they will be bound by the recommendation of the Board. The Nova Scotia act provides that in such cases the Board's recommendations become equivalent to orders of the Supreme Court of the Province. A dispute otherwise outside the scope of the act may be referred to a Board by mutual consent of the two parties.

The Provincial like the Dominion Act enables the Minister to constitute a Board, on the application of a municipality, where a strike is imminent, or the public interest is affected, regardless of the number of employees affected, or he may, as an alternative, recommend to the Governor in Council to appoint

a commission under the Public Inquiries Act to inquire into the dispute. The Minister further is given general powers to take such other steps towards industrial peace as he considers advisable. The Minister is required to present to the Legislature within the first fifteen days of each session, an annual report of the proceedings under the Act.

The Arbitration Commission

The principal provisions of the second part of the Industrial Peace Act providing for the establishment of a permanent arbitration commission are outlined below. As already stated, these sections will not take effect until the Governor in Council has proclaimed them in force.

The Arbitration Commission is to consist of three members, appointed by the Governor in Council, one of them to be designated as chairman. The chairman must be a barrister of the Supreme Court of Nova Scotia of ten years' standing; he will hold office during good behaviour, and the other members hold office for three years, at salaries to be fixed by the Governor in Council. The Commissioners will have the same privileges and immunities as judges of the Supreme Court of Nova Scotia.

The jurisdiction and procedure of the Commission are defined in the following sections:—

84. (1) If within one month after the filing of the recommendation of the board the parties to the dispute do not agree in writing to be bound by the recommendation of the Board as provided by section 60 of this Act, any of the parties thereto or the Governor in Council may, by application in the prescribed form filed in the office of the Registrar of the Commission, refer such dispute to the Commission for settlement and thereupon the Commission shall have full and exclusive cognizance of and jurisdiction to hear and to determine the same as in fairness and good conscience it in its sole discretion deems just including where a strike or lockout has occurred before and exists at the coming into force of this section, the awarding that the employee shall reserve employment and work, and the employer shall permit the employee to reserve employment and work in accordance with the award.

(2) The Commission shall also have jurisdiction and authority fully to inquire into and concerning all matters which the Commission in its sole judgment deems to have any connection whatever with or in any way to have any relation whatever to such dispute including but without restricting the generality of the foregoing.

(a) As to the employer:—

(i) The extent, condition and value of the physical assets of the employer used and useful in the operation of the business, industry or undertaking of the employer and into the condition and value of such business, industry or undertaking as a going concern.

(ii) The financial condition of the employer and if a corporation also its capitalization.

(iii) The reasonableness of the operating expenses incident to the proper carrying on of the particular business, industry or undertaking.

(iv) The annual depreciation.

- (v) The ruling prices of such commodity as is produced by the employer.
- (b) As to the employee:—
- (i) The cost of living.
 - (ii) The working condition.
 - (iii) The ruling rate of wages for similar classes of labour.
 - (iv) The work performed and the skill and attention with which it is performed.
 - (v) The constitution, by-laws, rules, regulations, policy, operations, practices, affiliations or associations, members and officers of any trade or employees or labour union, society, association or organization.
 - (vi) The reasonableness of requiring employers to make deductions from the wages of employees to be paid over to any organization or individual.

The procedure in inquiries by the Commission is similar to that in inquiries held by Conciliation Boards; in regard to the representation of the parties to the dispute, summoning of witness, the commission's right of entry into work places, etc.

The "compulsory" sections of the Act are as follows:—

104. (1) Notwithstanding any of the provisions of Section 55 of this Act or of any other section of this Act, where under this act a dispute has been the subject of a reference to the Board it shall be unlawful for the employer or employers or any of them to declare or cause a lockout or for any of the employees to go on strike or to interrupt the relationship of employer or employee on account of such dispute during a period of one month from the receipt by the Minister of the report and recommendation of the Board.

Where such dispute is referred under this Act to the Commission it shall also be unlawful after the expiration of said month for the employer or employers or any of them to declare or cause a lockout or for any of the employees to go on strike or to interrupt the relationship of employer or employee on account of such dispute.

(2) If any employer violates any of the provisions of this section such employer shall be liable on summary conviction to a penalty not exceeding five hundred dollars. If any employee violates any of the provisions of this section, and if any person aids, abets, incites, counsels or procures any employee to violate

any of the provisions of this section he shall be liable on summary conviction to a penalty not exceeding fifty dollars.

(3) A dismissal or suspension of any employees or the discontinuance of work by any employee shall be held to be a violation of this section unless the party charged with such violation proves that such dismissal, suspension or discontinuance was not on account of the dispute.

(4) Every employer who dismisses from his employment any employee by reason merely of the fact that the employee is a member of a trade, employees, or labour union, society, association or organization, or who is proved to have dismissed such employee merely because he is entitled to the benefit of an award shall be held to have committed a breach of the award. An employee shall be deemed to be dismissed when he has been suspended for a longer period than ten days.

(5) No employee shall be held to have violated any of the provisions of this Act or to have committed a breach of an award merely because he refuses to work or announces his intention to refuse to work at the rate of wages fixed by any award if he proves that such refusal was not in pursuance of an intention to violate any of the provisions of this act or to commit a breach of the award.

105. Every employer and employee, a party to a dispute that has been referred to the Commission, shall be bound by the award of the Commission. The award shall be made an order of the Supreme Court on the application of any such employer or employee or of the Attorney General on behalf of the Governor in Council and shall be enforceable by execution, attachment or otherwise as the Supreme Court may order. Whether or not such order is enforced under the provisions of this section, every employer and every employee who has violated or may violate any of the provisions of this act shall be liable to the penalties therefor prescribed by this Act.

106. The award of the Commission by force of this act shall extend to and bind every employee who is at any time whilst it is in force employed by any employer on whom the award is binding.

107. If any employer commits any breach of the award such employer shall be liable on summary conviction to a penalty not exceeding five hundred dollars. If any employee commits any breach of the award and if any person aids, abets, incites, counsels or procures any employee to commit any breach of the award he shall be liable on summary conviction to a penalty not exceeding fifty dollars.

RECENT LABOUR LEGISLATION IN MANITOBA

THE fourth session of the seventeenth legislature of Manitoba opened on January 15 and closed on April 9. The opening speech from the Throne referred to the improved conditions in the province, particularly in agriculture, the high prices of grain having favourably affected all lines of industry. Some important measures were passed during the session to promote more efficient marketing of farm products and encourage co-operative organizations for this purpose.

Workmen's Compensation

Of the legislation specially affecting labour the most important measure was the act

amending the Workmen's Compensation Act in accordance with the recommendations of the Special Committee which investigated this subject during the recess. The report of this Committee was given in the March issue of the GAZETTE. The changes effected by the new act are outlined in the following paragraphs.

Notice of an accident must be given to the employer by the injured workman or his dependants within thirty days, instead of "as soon as practicable", as formerly.

Provision was made for the payment for medical aid rendered to a workman who has

suffered no actual loss of wages as the result of an accident.

The Board was given authority to suspend or withhold payments in cases where the person benefiting is leading an immoral life, or is confined to gaol or hospital for mental diseases.

In connection with medical aid it was provided that the physician's account shall be filed within six months from the date of the workman's discharge from medical care or from the date of his return to work, whichever period is the shorter.

Vocational Training.—A new subsection was added making provision for vocational training, as follows:—

(11) The Board shall further have authority, out of the reserve set aside in any individual case to meet compensation provided by this Part, to provide for any injured workman, whose earning capacity in his previous occupation has been permanently impaired by the injury, such vocational training as may be deemed advisable for the purpose of preparing such injured workman for another occupation to which he may seem adapted and which is likely to increase his future earning capacity, and to this end the Board may contract with any institution or institutions furnishing such vocational training and may adopt rules and regulations for this purpose and for the payment of such training, and from time to time the Board may review the compensation previously provided, in view of his earning capacity in his new occupation, taking into consideration all conditions and circumstances at the time of the review.

Scale of Compensation.—The scale of compensation was altered as follows: Where the dependants are a widow (or invalid widower) and one or more children under 16 years of age, the allowance for the widow remains at \$30 a month, but the additional allowance for the children, instead of being uniformly \$7.50 for each child under that age, is to be \$12 per month for the eldest child, \$10 for the second, \$9 for the third, and \$8 for the other children.

The existing provision enabling the Board to continue to assist in the education of children after they have passed the age of 16 years was made subject to the condition that no levy, assessment or deposit is to be made until the child in question is approaching the age of sixteen and "the Board has decided that further and better education should be furnished such child."

The Board was given authority to pay for the medical care and burial of a workman who leaves no dependants. Where the workman leaves no widow or the widow subsequently dies, and it is desirable to continue the household, the Board may continue making payment to the foster-mother.

A minimum payment of \$15 per week was fixed for compensation for permanent total disability, irrespective of earnings.

In connection with the settlement of claims for compensation in cases of permanent partial disability by the payment of a lump sum, it was provided that payment may be made either in one sum, or in periodical instalments. Lump sum payments may be made also where the worker's earning capacity has not been reduced by more than 10 per cent. Moreover, the nature of the injury may be considered in estimating the degree of impairment, the Board "having always in view the workman's fitness to continue the employment in which he was injured or to adapt himself to some other suitable occupation."

The section governing compensation for temporary total disability was redrafted, the rate remaining at 62½ per cent of the workman's average earning, but with the further provision of a minimum weekly payment of \$12.50, except in cases where the average wage was less than that amount, when the total amount of average weekly earnings are to be paid. If the period of disability appears to be unnecessarily prolonged the Board may reduce, temporarily or permanently, the percentage of wages allowed in compensation, with power to restore the full percentage at any time.

The Board was empowered to administer any act of the Parliament of Canada, or any order of the Governor General in Council dealing with the payment of compensation to the persons named therein. Cases already dealt with may be reviewed by the Board periodically, and further or supplementary orders made in respect to them. (The act formerly allowed the Board to review cases, but the power to make a periodical revision is new.) The Board was also given authority to change the existing classification of industries coming under the Act.

The penalty of \$500 imposed on employers who made misleading returns as to their payroll was modified by an additional clause providing that such misrepresentation must be established by an audit, and by evidence that the employer wilfully under-estimated his probable payroll. New sections were added making provision for assessments in cases where the employers fail to make a statement; providing that the liability of an employer for assessment shall continue even though he has not been assessed in any year; and requiring municipal assessors, except in cities, to make annual returns to the Board giving full information in regard to all employers of labour in their district, other than those in farming or mercantile business, such information to be paid for by the Board out of the Accident Fund. The Board is further to have notice within three days of all

building permits issued in any municipality, city or town.

Assessments.—The Board may at any time require employers to furnish particulars of the nature of the different classes of work carried on by them. A new clause was added to the section relating to the creation of an accident fund out of capitalized reserves, the purpose of the yearly levy on employers being stated to be "so as to prevent the employers in future years from being unduly and unfairly burdened with payments which are to be made in those years with respect to accidents which have previously happened."

When a capitalized sum representing outstanding claims for compensation at a certain date is transferred to the reserve from one of the classes into which industry is divided, the amount so transferred is to be taken as representing the total charge against the class in respect to these claims, the Board assuming any further responsibility that may arise subsequently, and the amount transferred in respect to an injury or death belongs permanently to the reserve.

Changes were made to the act in regard to the penalties incurred by employers for refusing or neglecting to make returns. Such employers are liable to half, instead of the whole, amount of the capitalized value of the compensation payable with respect to any accident to a workman in his employ which has happened during the period of the default; but the amount so payable must not be less than \$50 or more than \$500.

For failure to pay an assessment an employer is to be fined an amount, additional to all other payments, equal to $2\frac{1}{2}$ per cent of the amount in respect of which he is at default for each half month, for the period of such default.

An order of the Board for payment by an employer of any money may become a judgment of the Court of King's Bench.

Contractors.—An addition was made to that section of the act which provides that a municipal corporation may pay the assessments in connection with work done for it by a contractor. The new subsection protects the rights of the principal to withhold the amounts which would be due from the contractor in respect to compensation.

The provision which was added to the act in 1921 in regard to the responsibility of contractors for the obligations of sub-contractors was repealed. This provision had made the contractor liable for the payment of compensation in cases where a sub-contractor failed to provide protection for the workman as required by the act.

The definition of the Board as contained in the act, was made subject to the appointment by the Lieutenant-Governor in Council of a successor to any member who has left office.

Minimum Wages for Women

This Act was amended in the section providing that an employee who has been paid less than the required minimum wage may recover from her employer the full amount less any amount actually paid, notwithstanding any agreement between the parties for lower wages. The amendment corrects an ambiguity in the wording of the section making clear that the minimum rates referred to are those fixed by orders, rules or regulations of the Minimum Wage Board. A further amendment provides that such cases may be heard by a magistrate, who may, if necessary issue his warrant of distress to levy the amount of such unpaid wages and costs by seizure and sale of the goods and chattels of the employer. The section protecting employees against the risk of dismissal for assisting the Board in any of its inquiries was strengthened by the addition of a clause to guard them against a similar risk in connection with the giving of information to an officer of the Bureau of Labour.

A bill introduced by a labour member to extend the scope of the act by including boys under the age of 18 years, was rejected by the legislature. The Minister of Public Works intimated that an investigation into the working of the Minimum Wage Act would be held during the coming recess.

Teachers' Retirement Fund

The Teachers' Retirement Fund Act provides for the establishment of a fund for the benefit of teachers outside Winnipeg School District Number 1, for which district provision already existed under an earlier act. Teachers will contribute one per cent of their salaries, trustees being authorized to make the necessary deduction before payments. Teachers, however, are allowed the option of remaining outside the Act. An unpaid board of administrators is set up, consisting of four members, two being appointed by the Lieutenant-Governor in Council, and the others elected by the teachers. This Board is the trustee of the fund, with power to make regulations for its administration, including the right to determine the amount of pension payable in each case.

Protection of Pensions

The Winnipeg Charter was amended to protect the pensions of retired employees against seizure, attachment or court process, and from

the operation of any law relating to bankruptcy. A similar safeguard was introduced into the Public Schools Act in regard to the payment of pensions to teachers in Winnipeg School District No. 1.

Employment Bureau

The Employment Bureau Act of 1918 was amended by the addition of a section enabling any municipal council in which no employment bureau has been established under the Act, either by itself or jointly with other municipalities, to pass a by-law to establish and maintain an employment office. Municipalities, however, will be required to notify the provincial department concerned of the establishment of such bureaus, and to furnish such information concerning them as may be desired. Municipalities are forbidden to charge fees for this service.

Threshers' Liens

The priority allowed to threshers under the Threshers' Lien Act in regard to the right to retain grain for the purpose of securing payment of threshing charges was extended by the new provision that this right is to prevail against "any mortgage or encumbrance charged upon such grain to secure the purchase price of the seed from which the same was grown."

Motor Vehicle Act

The definition of chauffeur under this act was recast to make its sense plainer as including persons who operate or drive a motor vehicle for hire, or an employee engaged or hired for this purpose. Persons renting motor vehicles are required to secure permits to drive, or chauffeurs' licenses.

Soldiers' Relief

The application of The Soldiers' Taxation Relief Act was extended so as to include in its benefits any person to whom or on whose behalf a pension or dependants' allowance is paid in respect to a deceased or disabled soldier by the Board of Pension Commissioners of Canada, the British Ministry of Pensions, or the Department of Soldiers' Civil Re-establishment.

The War Relief Act of 1918 was amended to limit the protection given, in respect to the property of the widow of a deceased soldier, to such property as was acquired by the soldier or his wife prior to the time at which the husband became entitled to the benefit of the Act.

A resolution was passed by the Legislature asking the Dominion Government to make a revaluation of the lands and effects of soldier settlers.

Child Welfare

A new section was added to the Child Welfare Act of 1922, supplementing the section defining the liabilities of a putative father for a share in the maintenance of a child. The new section provides for cases in which two or more persons may be the possible father, these persons being all liable to make contributions; by this provision the mother of a child born out of wedlock need not be deprived of financial help even when there is a doubt as to paternity.

Acts Affecting Agriculture

Several important measures were passed affecting farmers and farm workers. These acts include a co-operative association act, providing for the incorporation of marketing and mercantile association of farmers on strictly co-operative principles; an act to enable municipalities to borrow limited amounts of money for seed purposes; an act for the regulation and licensing of produce dealers; an act to amend the Manitoba Farm Loans Act to permit associations to sell bonds and other securities for specified purposes; an act to amend the Rural Credits Act in regard to the administration of the act, redefining the conditions under which loans may be renewed to persons unable to repay the amounts borrowed, and fixing the priority of liens under the act, subject to distress warrants for recovery of wages under the Masters and Servants Act and other liens; an act amending the "Act to Incorporate the Manitoba Co-operative Wheat Producers, Limited" by providing for the election of the directors by districts and enabling the company to execute marketing contracts with its shareholders up to ten years; an act to amend the Crop Payments Act in regard to leased lands.

Joint Council of Industry

No appropriation was made by the Legislature for this Joint Council. The Premier stated however that though the government had made no provision for carrying on its work there was no intention of discontinuing it, as it should be retained for use in future cases of emergency.

One Day's Rest in Seven

A bill to provide the general observance of one day's rest in seven in all classes of industry was rejected by 33 to 9 votes, the mover of the bill having declined to accept amendments which would have exempted certain occupations from its provisions.

Industrial Survey

An appropriation of \$12,000 was made in the annual estimates for a survey of the industrial and agricultural resources of the Province, including the vacant lands available for settlers, water powers, mineral wealth, fisheries and forest resources, and for the purpose of co-operating with the Winnipeg Industrial Survey in the carrying out of its programme. This programme is outlined elsewhere in this issue.

Revised Statutes

An Act was passed confirming the statutes contained in the volume entitled "Consolidated Amendments, 1924," containing the amendments to, and re-enactments of, certain of the Revised Statutes of 1913, together with other general public acts of the Legislature of the years 1914 to 1924, and repealing the original amendments. This involves a change in the Chapter numbers of the Statutes as previously quoted.

MINIMUM WAGES IN MANITOBA

New Order Governing Laundries and Dyeing and Cleaning Establishments

THE Minimum Wage Board of Manitoba has issued a new order to take effect on June 1, governing laundries and dyeing and cleaning establishments (1) in Winnipeg and St. Boniface and (2) in the rest of the province. The last order affecting laundries was issued in 1918, and the last order affecting dyeing and dry cleaning establishments was issued in 1919; no distinction, except in regard to laundries in Brandon and Dauphin, was made in these earlier orders between the rules for Winnipeg and the rest of the province. The sections of the new order which refer to hours and wages are as follows:—

Hours in Winnipeg and St. Boniface.—(1) Hours of Labour: The hours of labour shall be not more than nine (9) hours in any day or more than fifty (50) in any week. These hours shall be so arranged that each employee shall receive one afternoon half-holiday each week. No employee shall work between 10 p.m. and 7 a.m., or on Sundays. There shall be a period of not less than eleven (11) hours between the close of one day's work and the beginning of the next.

(2) Overtime: Overtime may be worked only on permit from the Bureau of Labour not oftener for any employee than 36 days in one year. No overtime to exceed three (3) hours in any day nor six (6) hours in any week. No minor under seventeen years of age shall work overtime. There shall be extra pay at not less than the regular rate for all overtime worked.

(3) Lunch Hour: At least one hour shall be allowed for lunch.

(4) Delays: An employee waiting on the premises as required by the employer shall be paid for the time thus spent.

Wages in Winnipeg and St. Boniface.—(1) Method of Payment: Wages shall be paid weekly, and after each week's wages have been earned they shall be paid within three (3) days.

(2) Notice to be given: After four weeks' employment one week's notice shall be required on the part of the employer in dismissing an employee, and on the part of the employee on leaving employment, except in the case of flagrant insubordination on the part of the employee, or flagrant unjust treatment on the part of the employer.

(3) Experienced employees of eighteen years of age or over shall be paid a weekly wage of not less than twelve dollars (\$12).

(4) Statutory Holidays: No reduction shall be made from the Minimum Wage for statutory holidays.

(5) Learners: Inexperienced employees shall be paid a weekly wage of not less than nine dollars (\$9) for the first six months after entering this industry and not less than ten dollars and fifty cents (\$10.50) for the second six months; after which period of twelve months she shall be considered an experienced employee. The total number of learners in any establishment shall not exceed twenty-five per cent of the total number of experienced employees.

Wages and Hours in rest of Province.—Establishments operating in towns not specified shall be governed by these regulations, except that the minimum wage for experienced employees shall not be less than eleven dollars (\$11) per week, and for inexperienced employees not less than eight dollars and fifty cents (\$8.50) per week for the first three months after entering the industry, and not less than nine dollars and fifty cents (\$9.50) per week for the second three months; after which period of six months she shall be considered an experienced employee.

Board and Lodgings, Etc.—Where lodging is furnished by the employer, there may be deducted from the wage a sum which shall be not more than two dollars (\$2) per week, and for both lodging and board not more than six dollars (\$6) per week.

Some points may be noted, in which the foregoing orders differ from those issued six years ago. The order of 1918 governing laundries fixed the minimum working hours for the week at 52, and provided that "the workers shall be released not later than 3 p.m. on any Saturday in the year, and not later than 2.30 p.m. on any Saturday in June, July or August. When Thursday or Friday is observed as a statutory holiday, the full nine hours may be worked on Saturday. No female employee shall work in any laundry between 12 o'clock Saturday night and 12 o'clock Sunday night." The limiting of overtime and the provision for payment for delays are new features in the new order.

The order of 1919 governing dyeing and cleaning establishments contained the same rules as the new order in regard to the length of the working day and week, but its pro-

visions as to work at nights, etc., were as follows: "Saturday afternoon shall be a half holiday. No female employee shall work between 7 p.m. and 7 a.m., or between 12 o'clock on Saturday night and 12 o'clock on Sunday night." The same order divided the female workers into groups, experienced spot-ter and pressers receiving \$12 a week, and those in other occupations receiving \$11 a week, and the scale for learners being graded according to the same standard.

The order of 1918 fixed the minimum wage

in laundries at \$9.50 per week for experienced adults, and, for adult learners, \$8 and \$9 for the first and second period of three months respectively; the rates for minors ranged from \$7 to \$9.50 per week. Somewhat lower rates were allowed in Brandon and Dauphin.

The new order contains several new requirements as to the sanitary and other conditions in the establishments, among which may be mentioned a new rule to the effect that where employees remain for lunch, suitable provision is to be made for dining and rest purposes.

REPORT OF MANITOBA BUREAU OF LABOUR FOR 1924

THE ninth annual report of the Bureau of

Labour of the Department of Public Works of the Province of Manitoba has recently been received by the Department. The period reviewed is from September 1, 1923, to August 31, 1924. A chart is given, however, showing the development of the inspection work since the establishment of the Bureau in 1915 (LABOUR GAZETTE, April, 1925, page 355) indicating an increase in inspections from 1,154 in 1915 to 15,336 in 1924, and of orders of improvement in connection with these of from 1,220 in 1915 to 5,704 in 1924. The report describes the Bureau's work during the year in connection with each of the Acts under its administration, namely: "The Bureau of Labour Act", "The Manitoba Factories' Act", "The Bake Shop Act", "The Shops Regulation Act", "The Minimum Wage Act", "The Elevator and Hoist Act", "The Public Amusement Act"—(The Licensing of Cinema Projectors), and "The Fires Prevention Act". It also contains an appendix giving particulars regarding the administration of unemployment relief during the year.

Among the outstanding features of the year were the amalgamation of the Fire Prevention Department with the Bureau of Labour on February 1, 1924, for the purpose of avoiding duplication in inspection work; the bringing into effect on October 19, 1923, of new regulations under "The Elevator and Hoist Act" by which direct inspection was to be made by Bureau of Labour inspectors, operators of freight elevators were to hold licenses, and an interlocking device was to be provided for doors of passenger elevators to prevent the car from being moved until the doors opening into the shaft were closed; and the development in the province of steam by electricity, a number of new electric steam generators having been installed. The Bureau frequently received requests from owners for advice on the

safe installation of new machines, or safety in connection with changed conditions of factories. The number of licensed elevator operators employed during the year under "The Elevator and Hoist Act" was 2,110, the number of elevators inspected was 1,040, and the total number of inspections 4,573.

There were 1,026 orders for improvement of safety conditions and 149 orders for improvement of health and sanitation conditions issued under "The Manitoba Factories' Act"; 58 orders for improvement of safety conditions and 14 for improvement of health and sanitation conditions issued under "The Bake Shop Act"; and 155 orders for improvement of safety conditions and 10 for improvement of health and sanitation conditions issued under "The Shops Regulation Act". A tendency was shown throughout the country districts to revive the use of steam threshing engines. The inspectors have constantly to guard against the practice of bringing old boilers into service which are unsafe for further use. Another difficulty encountered in country districts by the boiler inspectors was the failure by owners to carry out inspectors' orders in connection with the proper maintenance of the fusible or safety plug, which is stated to be a dangerous practice and one liable to cause explosions. There were 4,895 inspections of boilers, 62 designs registered for boilers and tanks, and 84 designs for registered boiler fittings during the year. A total of 1,147 certificates were issued of which 116 were by examination, 13 were special and 1,108 were renewals and 133 were first class, 336 second class and 678 third class.

Although little building activity existed there were 497 inspections made and 204 orders issued for improvement of conditions under "The Building Trades Protection Act", 11 inspections and 3 orders under "The Public Buildings' Act", and 312 inspections and 28

orders under "The Electricians' License Act".

A revised schedule for employees on public works under "The Fair Wage Act" became effective from June 1, 1924, to April, 1925 (see LABOUR GAZETTE, June, 1924), but on July 31, 1924, a further revision of the schedule was made effective from July 18, 1924, as follows:—

	per hour.
Bricklayers.. . . .	1.25
Stone masons.. . . .	1.25
Marble setters.. . . .	1.20
Mosaic and tile setters.. . . .	1.15

There were 5,416 accidents reported during the year of which 8 were fatal. Of these accidents 280 were in the building trades, and 10 were elevator accidents. The report states that there is still a great need for considerable educational work relative to safety. First Aid work received considerable attention during the year and 76 males and 13 females obtained certificates of proficiency.

There were 194 permits for overtime and 12 for legal holidays issued during the year. Of these 31 were to ladies' wear factories, 30 to departmental stores, 26 to laundries, 18 to offices, 16 to mail order houses, 14 to printing establishments and 13 to abattoirs.

Very few attempts were made in the province to exploit child labour, although occasionally a case was discovered which appeared clearly due to ignorance of the law. There were nine orders for improvement in labour conditions issued under "The Manitoba Factories' Act" and three under "The Shops Regulation Act". Eleven applications were made to the Bureau for permission to work during

the school holidays; eight were granted and three refused.

The Minimum Wage Board held twenty-five meetings and revised regulations for departmental stores and mail order houses. In many cases it was found necessary to call the attention of the employers to the regulations, particularly in restaurants where violations of same have occurred, insofar as employing girls at less than the minimum wage and failure to give one day off in seven. Three prosecutions were made under the Minimum Wage Act. There were 2,268 inspections of establishments made and orders for improvement of conditions were issued in 225 cases. For shorter hours in 126 cases, and regarding wages in 82 cases.

Unemployment Relief.—The cost of the Manitoba Government's share of expenses for unemployment relief during the winter of 1923-1924 was \$55,104.39 as compared with \$63,542.80 in the winter of 1922-1923; \$161,718.85 in the winter of 1921-1922 and \$78,952.28 in the winter of 1920-1921. The policy followed by the Manitoba Government is stated as follows:—

- (1) Effective December 7, 1923, to assist in relief of persons, in excess of a normal number, having two or more dependents, by refunding the municipality of the financial relief necessary.
- (2) To pay to municipality one-third of the excess cost of doing organized work in the winter time as compared with the summer.
- (3) To pay to municipality one-half of the increased administration expenses due to relief measures.

The participation by the Government in relief measures ceased on April 26, 1924, after which date the matter was left in charge of the municipalities.

MOTHERS' ALLOWANCES IN SASKATCHEWAN

AN account of the work done during 1924 under the Mothers' Allowance Act of Saskatchewan is given in a report on the year's work issued by the Provincial Bureau of Child Protection. During the year 577 new applications for allowances were received. Of this number 248 were not allowed; 329 were allowed. There were also 754 allowances on the pay-roll in the preceding years 1918 to 1923, both inclusive, making up a total of 1,083. There were 136 cancellations for these years made in 1924, and 22 for the year 1924—158 cancellations in all, leaving 925 allowances in force as shown on the pay-roll on December 31, 1924. During the calendar year the total amount paid was \$240,885, at an average per family of \$21.70 per month. There were 3,188 children under sixteen years of age

represented in these families. Of the total 925, at the end of 1924 there were 779 widows; 114 women whose husbands were incapacitated from earning a living for the family and were either in an institution or at home; eight were cases where orphans were being taken care of by widows or unmarried women; and 24 cases where the husband and father was in jail or penitentiary. Comparing 1924 with 1923, there were 76 more applications received in 1924 over 1923; 64 more applications were allowed in 1924 over 1923; 127 more cancellations, and at the end of the year there were 171 more receiving allowances. The sum of \$25,245 more was paid out in 1924 than in 1923, but \$3.24 less per family per month was paid in 1924 than in 1923. Details of the activities of the field force of the Bureau show

that during the year 964 inspections of wards in foster homes was made; 250 children were escorted; 233 cases of alleged wilful neglect were investigated; 32 homes were investigated before placing children; 15 deaf, blind, or feeble-minded cases were investigated and 29 juvenile court cases were attended.

Bureau of Child Protection

The Bureau of Child Protection was established under an Act of 1922, its duties including administration of Children's Protection

Act, Juvenile Courts' Act and Mothers' Allowances Act.

The total number of children under the supervision of the Bureau on December 31, 1924, was 2,056. Under the Juvenile Courts Act authorizations were given to justices of the peace to act as juvenile court judges and trials were arranged by the Bureau for 327 cases. Forty-seven of these were taken by local justices in rural districts. During the school term for 1923-24 the Bureau provided tuition and arranged escorts for 16 blind children.

SOCIAL WORK IN MONTREAL

A VALUABLE handbook on social work in Montreal, with particular reference to the Protestant organizations, has recently been issued by the Montreal Council of Social Agencies. It reveals the existence of a large and efficient body of voluntary social workers in this district. Much of this voluntary effort is in fields of operation that lie also within the sphere of legislation, and therefore may be considered as supplementing the benefits conferred on the needy class by labour legislation.

The existence of numerous organizations having similar objects has led to efforts to co-ordinate their work in recent years. One of the chief central organizations is the Montreal Council of Social Agencies, which exists to promote co-operation in meeting problems of common interest, to develop plans for social betterment, and to create an intelligent public opinion as to social problems. The report of the Council points out the necessity for co-operative action, as no single agency having its own special function in the community can hope to make any serious or successful attack on such problems as Housing, Child Labour, the Wage Question, or Unemployment. A Financial Federation was organized in connection with the Council early in 1922, and began to function in 1923. In that year 26 social service agencies were included in the Federation. The publication of the Year Book was undertaken by the Federation in order to promote co-operation, all the reports of the various societies being published under one cover in the hope of reaching a larger circle of readers.

Some facts about the work of the various societies is given in the following paragraphs:—

Mothers' Aid Branch

The work of the Mothers' Aid Branch of the Family Welfare Association is of special interest from its connection with the move-

ment for establishing a provincial system for the payment of Mothers' Allowances. This Branch was organized at the request of the Board of Trustees at a meeting held October 24, 1919, for the three-fold purpose: (1) To use the existing resources of the city, and to supplement those resources where thought advisable, to the end that mothers with dependent children may be enabled to keep their homes together in a manner that will provide for the children growing up with the companionship and guidance of the mother, and with such reasonable opportunities for education, recreation, happiness and moral growth as will make them useful citizens in the future; (2) to work for the introduction of Mothers' Aid Legislation in the Province of Quebec, by rousing public opinion to a realization of its needs, and to seek a greater measure of public support for this work as at present carried on by private agencies and (3) to assist in the efforts being made to counteract the needless loss which the community suffers by reason of preventable disease, preventable industrial accidents, the lack of any system of social insurance and similar weaknesses in our social life.

The methods of the Branch consist of introducing a friendly visitor to every family under its care to estimate the amount of assistance required and the conditions to be attached to the allowance. The pension, when approved, is paid by the Family Welfare Association, visitors being forbidden to pay relief. Effort is made to secure the active co-operation of other women's organizations in the city.

The Provincial Government has made generous grants to the Family Welfare Association and to the Mothers' Aid Branch. During the four years 1916 to 1919 the Family Welfare Association received a grant of \$400 per annum. In September 1922 \$2,000 was received from the Government by the Association and a similar

grant was made in November, 1923. In 1924 the government placed a further sum of \$10,000 at their disposal to enable them to make a trial of a system of Mothers' Allowances in connection with the Mother's Aid Branch. The sum of \$8,000 was also received in April for the Branch (it might be explained that the \$2,000 received in 1923 was for the same purpose).

During the year 1924 the Mothers' Aid Branch received applications for aid from 130 widows with one or more children. In 35 cases it was found possible after investigation to make adjustments so that material relief was unnecessary; while 14 widows with one child under fourteen received temporary aid pending her return to work after sickness and so kept the children from being placed in an institution where they would have become a charge upon the Province. In 81 cases it was found necessary to give aid to the widows applying. Of these 24 received aid for 1 to 3 months during convalescence pending their return to work and to independence. Here again institutional care would otherwise have been necessary if a helping hand had been refused. These 81 widows had 290 children living at home, of whom 235 were under 14 years of age and 55 over.

It is interesting to note that only 32 of the 81 widows receiving aid were known to the Family Welfare Association previous to the death of the breadwinner. Of these only six were not under care at the time of death, while 26 who were under care at the time of death owing to the man's chronic sickness (usually tuberculosis) were unable to secure proper sanatorium care. It was this state of affairs that prompted the Mothers' Aid Branch to wait on the Premier in 1924 and urge the necessity for the immediate re-opening of the Ste. Agathe Sanatorium, which at the time of writing this report still remains closed, while the need is as great as ever. Definite information regarding the earnings of the breadwinner prior to his death was secured only from 26 families. The great majority reported that short time and unemployment had been a factor for the past few years. Undoubtedly these conditions re-acted on the health of the family in lowered vitality, and bear upon the tuberculosis death rate; while the mental condition that caused two men to commit suicide and two to be sent to Verdun can be traced to their being unemployed.

When it is taken into consideration that 60 per cent of these men made some provision for their families and that notwithstanding financial difficulties the great majority remained self-supporting during their lifetime or until sickness overtook them, it will be agreed that they were thrifty and hard-working men.

Of the 81 families receiving temporary or regular aid only 8 families had no health problem of any kind.

The principles followed by the Mothers' Aid Branch are stated in the report as follows:—

1. The mother is the best guardian of her children.
2. Poverty is too big a problem for private philanthropy.
3. No woman, save in exceptional circumstances, can be both the home maker and the bread-winner of her family.
4. Preventive work to be successful must concern itself with the child and the home.
5. Normal family life is the foundation of the State and its conservation an inherent duty of Government.
6. That experience elsewhere has shown that it is feasible to administer aid to widowed mothers wisely and efficiently by public officials.
7. That such aid is the most economical as well as the most socially advanced method in caring for dependent children.

In conclusion, the Mothers' Aid Branch is of the opinion that "allowances to mothers" when given after careful investigation by trained social workers and followed up by efficient supervision will benefit the individual members of the family concerned and will over a period of years result in decreasing the cost of maintenance of dependents within the province.

Children left to grow up without parental supervision will increase the number of adults inhabiting our gaols, correctional institutions, refuge homes and hospitals.

In 1922 a delegation from the Family Welfare Association laid before the Provincial Government a petition setting forth the need for Mothers' Allowances, pointing out that conditions in Quebec differ from those obtaining in more newly settled Provinces, and asking for an appropriation of \$200,000 per year for five years for a provincial scheme for Mothers' Allowances. These proposals were considered favourably by the Provincial Government.

Family Welfare Association

This Association gave assistance during 1923 to 1,786 families. Six district visitors, with three assistants, were responsible for the constructive work with these families. The report shows that "unemployment was a cause of distress in 792 families and under-employment (i.e., short-time work) in 230. Unemployment is the root cause of much that is evil in our midst, with its dragging down of family standards, its lowering of health by insufficient food and clothing, its plunging the family into debt and despondency."

The Employment Bureau of the Association supplied work for 52 men and 812 women. The secretary tries to find the right job for the right person, and has been successful in filling 302 permanent positions. Eight thousand nine hundred and sixty-six temporary positions (or an average of 32 a day) mostly in housework, office cleaning and handy-man jobs were also filled.

Children's Bureau

The Children's Bureau, organized in November, 1919, is primarily a clearing house for the placement of dependent Protestant children from infancy to the age of fourteen. The bureau investigates applications for admission to the affiliated agencies, places children in institutions, places and supervises them in foster homes, and follows up in wage homes boys and girls from 14 upwards who have been in charge of the bureau. The bureau cares for dependent Protestant children accepted by the Department of Municipal Assistance under the Public Charities Act.

Child Welfare Association

The objects of the Child Welfare Association are:—

To promote the knowledge of child hygiene in all its phases.

To encourage methods and measures to reduce maternal and infant sickness and mortality.

To initiate or support measures conducive to the health, happiness and welfare of children.

To emphasize the need of keeping babies well by medical advice, by supervision, by encouraging breast feeding, and by instruction of mothers in the laws of health.

During the year 3,500 babies have been registered at the Health Centres and 3,060 were under supervision at one time. There were 971 baby conferences held during the year and 22,728 visits paid to the babies in their homes by the nurses engaged in this work.

The work of the Association is described under the following heads: pre-natal work; nutrition classes in schools; summers-day camp; health letters and publicity.

Society for the Protection of Women and Children

This society has now completed its forty-fourth year. It conducts extension work among destitute and distressed families by means of visits and consultations, by finding employment, securing attendance in sickness, legal advice, etc. The report states that recently the society in concert with the Family Welfare Association, gave its endorsement and support to a further amendment to the existing law governing "Bailiffs' Sales." The bill covering this amendment, called the Bercovitch Bill, provides that household effects shall not be seizable for debts less than \$50, exclusive of legal costs. The previous amendment, which became law in December, 1922, and which was the direct outcome of the activities of the same society, raised the value of household effects exempted from seizure from \$50 to \$200. Thus slow but very sure improvement is being effected in at least one law that closely

affects the working man and his dependents. The society hopes "that further amendments to this bill, such as centralized auction rooms, independent appraisal, etc., will in the future be favourably received by the Legislature, until the Quebec law in this respect stands on par with that obtaining in other provinces and states; where, while bailiffs' sales are almost unknown, the creditor gets the fullest justice."

School for Social Workers

The School for Social Workers has been developed since 1918, because it was realized that in Montreal, as elsewhere, progress in social work depends upon the education, experience and skill of social workers. Many of the graduates of the school are now engaged in full-time social work with various social agencies in Montreal. The existence of opportunities for acquiring knowledge and skill in social work, places upon agencies, individuals and the public interested in social welfare a real obligation to make the fullest possible use of these opportunities. (Reference was made in the LABOUR GAZETTE for January last to the courses for social workers at McGill University, Montreal).

Other Agencies

Other social agencies whose annual reports appear in the Handbook are the Association of Big Brothers; Boys' Home; Boys' Welfare Association; Brehmer Rest; Canadian Prisoners' Welfare Association; Chalmers House; Daily Vacation Bible Schools; Day Nursery; Girls' Cottage Industrial School; Griffintown Club; Industrial School for Epileptics; Iverley Settlement; Ladies' Benevolent Society; Mental Hygiene Committee; Montreal Diet Dispensary; Murray Bay Convalescent Home; Parks and Playgrounds Association; Protestant Industrial Rooms; Protestant Infants' Home; Protestant Orphans' Home; Sailors' Institute; School for Social Workers; Sheltering Home; University Settlement; Victorian Order of Nurses; Western Hospital; Westmount Victorian Order of Nurses; Young Women's Christian Association.

Safety or accident prevention associations have been established, under the authority of the Ontario Workmen's Compensation Act, by employers in eighteen out of the 24 classes into which industries are divided. These associations are under the management of the employers, but the expenses are paid by the Workmen's Compensation Board out of the accident fund. These expenses totalled \$79,506 during the year 1924.

WORKMEN'S COMPENSATION IN GREAT BRITAIN DURING 1923

THE British Home Office has issued a volume containing Statistics of Compensation and of Proceedings under the Workmen's Compensation Act, 1906, and the Employers' Liability Act, 1880, for the year 1923. The statistics relate to seven great groups of industries in regard to which, under the Act of 1906, particulars of compensation paid are supplied by employers—mines, quarries, railways, factories, docks, constructional work and shipping. These groups embrace a large proportion of the chief industries, but they do not by any means cover the whole field. Besides the various commercial, clerical and domestic employments to which the Act applies, there are several important industries, which are not covered by the returns, for example, building, road transport and agriculture. In the groups of industries included in the statistics an aggregate of 7,342,311 persons, coming within the provisions of the Act, were employed, on the average throughout the year 1923.

The number of cases on which compensation was paid in 1923 was 2,657 fatal and 477,378 non-fatal, as compared with 2,489 fatal

and 390,423 non-fatal cases in 1922 and 4,021 fatal and 419,031 non-fatal cases in 1911. The average amount of compensation paid in fatal cases in 1923 was £222, as compared with £220 in 1922 and £154 in 1911. The average amount paid in 1923 in non-fatal cases was £59 10s. for lump sum payments and £11 13s. for weekly payment cases, as against £65 3s. and £12 9s., respectively, in 1922; the average for all non-fatal cases was £13 14s. in 1923, as against £15 5s. in 1922, and £5 16s. in 1911.

The proportion of fatal cases to total number employed has shown very little variation over the last five years. There has been an increase in non-fatal cases during the last three years, due almost entirely to an increase in the rate of accidents lasting less than thirteen weeks, and especially in those lasting less than four weeks, which constitutes more than half the total number of accidents.

The following table shows the number of persons employed, the total compensation paid, and the charge per person employed, in each of the seven groups of industries for the years 1922 and 1923:—

Industry	Persons employed		Total compensation paid		Charge per person employed	
	1922	1923	1922	1923	1922	1923
					s. d.	s. d.
Shipping.....	216,181	227,210	180,918	173,220	16 9	15 3
Factories.....	5,119,388	5,103,240	2,241,336	2,387,417	8 9	9 4
Docks.....	122,030	143,942	224,683	262,621	36 10	36 6
Mines.....	1,122,511	1,214,660	3,424,604	3,810,661	61 0	62 9
Quarries.....	62,781	68,979	71,595	83,640	22 10	24 3
Constructional work.....	93,183	106,002	88,148	123,934	18 11	23 5
Railways.....	469,535	478,278	264,444	292,603	11 3	12 3
Total.....	7,205,609	7,342,311	6,495,728	7,134,096	18 0	19 5

Figures are also given concerning the various industrial diseases included under the Workmen's Compensation Act. Compensation was paid, in seven groups of industries, in 21 fatal cases to the amount of £4,134, and in 16,844 disablement cases to the amount of £631,163. The 21 fatal cases included 18 cases of lead poisoning, 1 of anthrax, 1 of dermatitis,

and 1 of nystagmus. The bulk of the non-fatal cases occurred in the mining industry, and were chiefly due to miner's nystagmus, "beat hand" and "beat knee." Those diseases, together with "beat elbow" and inflammation of the synovial lining of the wrist joint and tendon sheaths, numbered 15,835, or 93.9 per cent of the total number of cases.

Children in Moving Picture Studios

A regulation intended to limit the exploitation of children in the production of moving pictures has been passed in the city of Berlin, Germany. The regulation prohibits the employment in studios of children under the age of three years. For children over that age who are still attending school, a license must be procured from the Police Department. Licenses are granted only on condition that

the children are not to be exposed to any danger of a sanitary or moral nature. As the order affects only the moving picture studios in Berlin, the German Minister of Labour is considering the advisability of having similar provisions added to the Act governing the participation of children in the taking of films throughout the country.

TRADE UNION MEMBERSHIP IN CANADA

Summary of the Contents of the Annual Departmental Report on Labour Organization

THE Fourteenth Annual Report on Labour Organization in Canada, being for the calendar year 1924, has just been issued by the Department of Labour. The volume, which consists of 267 pages, in addition to giving figures as to the numerical strength of organized labour in the Dominion, discusses the various organizations with which the wage-earners of Canada are directly or indirectly identified. Reference is made to the early labour unions established in the Dominion, and particulars concerning some of the more important activities of labour bodies during the past year are also given a place in the report. The figures published indicate that the slight gain in trade union membership recorded for 1923 has not been maintained, having been in fact followed by a decline, the loss in local branch unions for 1924 being 58, and in members 17,449. The total number of branches of all classes of unions at the close of the year was 2,429, their combined membership being 260,643.

The report contains the names of 89 international organizations with local branches in Canada, five less than the number recorded in 1923. Altogether they have 2,034 Canadian branches, with a combined membership of 201,981. These figures, although showing losses of 45 branches and 1,862 members, indicate that the internationally organized workers represent approximately 78 per cent of the total of all classes of workers in the Dominion identified with trade union bodies.

The eighteen organizations comprised in what is termed the non-international group had 268 local branches, a loss of ten as compared with the previous year, and a reported membership of 21,761, a decrease in members of 12,554.

There were 33 independent units (bodies not connected with any central organization), nine more than the number recorded in 1923, with a combined reported membership of 11,901, an increase of 1,967.

The national and Catholic unions number 94, a loss of twelve, the bulk of which are in affiliation with the Federation of Catholic Workers of Canada. This body reported that the combined membership of the Catholic unions at the close of 1924 was 25,000, a decline of 5,000.

The chart on page 470, which is taken from the report, shows the fluctuations in Canadian trade union membership from 1911 to 1924, the period covered by the departmental annual reports on labour organization.

Another chart published in the report shows that the 260,643 trade union members in the Dominion are divided by trade groups as follows:—

- railroad employees, 75,130 members;
- building trades, 26,648;
- public employees, personal service and amusement trades, 25,661;
- mining and quarrying trades, 24,286;
- other transportation and navigation trades, 21,348;
- metal trades, 15,845;
- clothing, boot and shoe trades, 14,290;
- printing and paper making trades, 13,703;
- all other trades and general labour, 43,732.

By provinces, the 2,429 local branch unions in the Dominion are divided as follows: Ontario, 1,007; Québec, 429; British Columbia, 236; Alberta, 217; Saskatchewan, 164; Manitoba, 133; Nova Scotia, 126; New Brunswick, 106; Prince Edward Island, 11.

There are 34 Canadian cities in which not less than 20 local branch unions of all classes are operating, and among them they represent 49 per cent of the entire trade union membership of 260,643 in the Dominion. The cities of Montreal and Quebec, in addition to the international and non-international branch unions and independent units, have each 23 national and Catholic unions in their respective districts. Of the 1,851 unions which reported their membership, 19 have 1,000 or more members, the largest union reporting having 3,796 members.

Reference is made in the report to the various classes of delegate bodies which have been established as a part of the plan of labour organization in North America, and which are designed to co-ordinate the activities of unions of kindred or particular trades in dealing with matters of like concern to all members of the bodies represented.

Labour Organization Abroad.—Apart from the information given in the report as to the membership of labour organizations in the Dominion figures are published showing the numerical strength of organized workers in 43 other countries, the total, including Canada, being 36,796,149. Of this number, 16,506,475 distributed through 24 countries, are sympathetic though not actually affiliated with the International Federation of Trade Unions, with which organization the Trades and Labour Congress of Canada, with its 117,110 members,

is affiliated. The following are the figures for the various countries as taken from the report:

Argentina..	120,000
Australia..	699,743
Austria..	1,117,192
Belgium..	744,998
Brazil..	100,000
Bulgaria..	49,803
Canada..	280,343
Chili..	150,300
China..	300,000
Cuba..	100,000
Czecho-Slovakia..	1,504,223
Denmark..	302,504
Dutch East Indies..	60,000

Revolutionary Movement.—A chapter of the report is devoted to a group of what are termed revolutionary labour bodies which are endeavouring to propagate their principles through the medium of the old established trade unions. These include (1) Red International of Labour Unions the trade union adjunct of the Third (Communist) International of Moscow, (2) the Communist Party of Canada, an affiliate of the Communist International, (3) the Young Communist League, and (4) the Trade Union Educational League, the official representative in Canada and the United States of the Red International. Among the objects of these revolutionary bodies are the organization of the working mass of the whole world for the overthrow of capitalism and the setting up of the dictatorship of the proletariat. The Red International of Labour Unions since its inception in 1920 has carried on a most hostile campaign against the International Federation of Trade Unions and its affiliates, the result being that the

trade union movement in the European countries has been severely split. During the year 1924 efforts have been made to bring about a conference of representatives of these two organizations with a view to unity. While much correspondence has passed on the subject, no agreement was reached. The report refers to the system of "boring from within" which the communists have adopted as a means of securing support for the programme of the Communist International. To this policy of the communists the trade union movement, as represented by the American Federation of Labour and the Trades and Labour Congress of Canada, has taken strong exception, and a number of their affiliated organizations have expelled several members who were known to be identified with revolutionary bodies.

Nova Scotia Mine Workers.—Under the caption of "Affairs in District 26" the report deals with the troubled conditions which have prevailed among the coal miners in the Nova Scotia coal fields, and relates (1) how the refusal of the international executive board of the United Mine Workers to honour relief orders which had been issued by the provisional executive board of the district, during a cessation of work early in 1924, added to the discontent prevailing as a result of the charter of the district being revoked in 1923 by the officers at headquarters, these officers having declared the strike of that year a violation of the agreement with the employing company (the British Empire Steel Corporation); (2) how the decadent One Big Union had launched an organizing campaign in the district, a proceeding to which the communists had taken objection, and which led to a bitter conflict between the adherents of these two bodies. The report finally states that the international executive board had restored autonomy to the district, regular officers being elected to manage its affairs.

Industrial Organization.—The report also refers to amalgamation of craft unions into industrial bodies, a subject which lately has been much to the fore through the activity of the communists, whose policy is one union for each industry, similar to the plan of organization in Russia. Attention is first being given to the railroad industry, the sixteen standard organizations embracing railway workers to be merged into one body under what is termed the "Minnesota plan". While two Canadian delegate bodies whose members embrace railway shop mechanics approved of the amalgamation proposal, the Trades and Labour Congress of Canada, the chief labour body in the Dominion, has on more than one occasion gone on record as being opposed to any change in

the existing form of organization. Another proposal which has been made is one providing for greater autonomy for the Canadian internationally organized workers, the object

FOURTEEN YEARS OF TRADE UNIONISM IN CANADA

of which is to permit the members of branch unions in Canada to join in any mass action, such as general or sympathetic strikes, without the consent of the respective parent organizations. Although one trades and labour council and nine local branch unions supported this suggestion, the Trades and Labour Congress registered its disapproval, as did also Division No. 4, Railway Employees' Department of the American Federation of Labour, a delegate body embracing railway shop mechanics employed on Canadian railway lines.

In a chapter under the title of "Industrial Unions" considerable space is given in the report to the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system. This body since 1917, when many of its members were convicted under an indictment entered by the United States Government, has had an eventful career. Among the later incidents in connection with the I.W.W. (the abbreviated name under which the organization is commonly known), was a court action which arose through the acceptance of conditional pardons by some of those members who had been sentenced to prison terms for violation of United States laws. The 1923 convention of the I.W.W. approved of the action of those who had taken advantage of the conditional release, and ordered a cessation of attacks against them on pain of expulsion from the organization. For violation of this convention order three members were suspended by two of the general officers. Other officers objected to this proceeding, the differences between them being later carried to the courts. Efforts were made to have the matter settled without resort to legal action, but to no avail. Finally a special convention of the I.W.W. was called to deal with the matter in dispute, one of the first acts being to remove from office the leaders of both parties to the disagreement. A new set of officers was elected and several of those who were implicated in the dispute were expelled from the organization. The newly appointed officers were empowered to represent the organization in the court proceedings, but the result of the action had not been made known when the report went to press. Subsequently certain of the expelled members set up a dual I.W.W., with offices in Chicago, the headquarters of the parent body. The report states that the temporary injunction granted in 1923 to restrain the I.W.W. from functioning in California was in 1924 made permanent; under this injunction membership in the organization may be declared in contempt of court. The I.W.W. has made some progress in Canada, now having six branches, included in which are the lumber

workers who in 1924 seceded from the One Big Union. Some members of the I.W.W., who it was stated were endeavouring to create discontent among the harvesters who were working in the grain fields of Western Canada, were convicted on charges of vagrancy. The officers in Chicago provided counsel for the prisoners and appeals were entered, with the result that three out of four convictions were quashed. Employing lumber companies in British Columbia secured an injunction against striking members of the I.W.W., and entered a claim for damages. When the case came up for trial the lumbermen's association, with which the companies concerned are affiliated, paid to the I.W.W. the sum of \$2,450 to settle the case out of court. The strikers had previously returned to work, having decided "to take the strike back to the job."

The report deals with the development of labour political parties in Canada and outlines some of the matters dealt with at their conventions. Reference is also made to the participation of labour candidates in the British Columbia general election, three parliamentary by-elections and the municipal elections, as well as to the defeat of the Labour Government in Great Britain.

Trade Union Benefits.—As one of the features of trade union activity the report gives figures showing the large expenditures made for benefits, especially by the international organizations. Of the eighteen bodies classed as non-international four reported payments for benefits during 1924, the total being \$33,027, a decrease of \$9,208 as compared with the preceding year. Of the 89 international organizations having branches in Canada 60 had disbursements for one or more benefits, payments on account of death benefits being made by 49, unemployed and travelling by 10, strike by 39, sick and accident by 23, and old age pensions by four. The total expenditure in Canada and the United States for benefits by the central international organizations was \$20,800,364, a decrease of \$3,876,577 as compared with the disbursements by 62 organizations in 1923. The expenditure for the various benefits was as follows:—

Death benefits.. . . .	\$11,211,924
Unemployed and travelling benefits..	1,044,546
Strike benefits.. . . .	2,781,280
Sick and accident benefits.. . . .	4,160,072
Old age pensions and other benefits..	1,102,542

Information is also given in the report showing the amounts paid out by many of the Canadian local branch unions to their own members, which sums were in some instances paid in addition to the benefits received from headquarters, and in other cases covered benefits not provided for by the central bodies

The total sum expended by the local branches was \$358,902, an increase of \$25,693 as compared with the amount expended in 1923. The disbursements for 1924 by the local branches for the various benefits were:

Death benefits.. . . .	\$ 68,019
Unemployed benefits.. . . .	19,600
Strike benefits.. . . .	101,346
Sick benefits.. . . .	124,617
Other benefits.. . . .	45,320

A chapter of the report is devoted to a class of associations which are in no way identified with the organized labour movement, but which in the main are composed of wage-earners, and are considered to be of sufficient importance to justify reference being made to them in a report designed to show the stand-

ing of bodies of wage-earners in the Dominion. There are 66 associations included in this non-trade union group, the principal ones being those composed of school teachers, Government employees and commercial travellers, the combined membership being 86,333, an increase of 771 over the number of members recorded in this group in 1923.

The Fourteenth Annual Report on Labour Organization in Canada, like its predecessors, forms a complete labour directory, containing not only the names and addresses of the chief officers of local branch unions in the Dominion, but also those of the central organizations with which the Canadian organized workers are connected and of the various delegate bodies.

NOTES ON LABOUR UNION ACTIVITIES

Dates of Coming Conventions

Federation of Catholic Workers of Canada at Granby, Quebec, in July.

Brotherhood of Locomotive Firemen and Enginemen at Detroit, Michigan, in June.

National Association of Woolsorters at Lawrence, Massachusetts, on June 26.

Pattern Makers' League of North America at Cleveland, Ohio, in June.

Glass Bottle Blowers' Association of United States and Canada at Baltimore, Maryland, on July 6 to 13.

National Brotherhood of Operative Potters, at Atlantic City, New Jersey, in July.

International Brotherhood of Bookbinders on July 6 to 13.

International Stereotypers and Electrotypers' Union at Milwaukee, Wisconsin, on July 20 to 25.

Upholsterers' International Union of North America, on July 20.

International Plate Printers and Die Stampers at Washington, D.C., on July 20 to 27.

International Union of Journeymen Horse-shoers, at Cincinnati, Ohio, on July 20.

International Federation of Trade Unions

The International Federation of Trade Unions has recently published at Amsterdam its third year-book of the International trade union movement, which may be obtained for ten shillings or the equivalent of that amount. This publication shows that at the end of 1923 there were affiliated to the Federation 23 trade union centres, comprising 835 organizations with a total membership of 15,321,692. The sex is reported in regard to 14,687,145 members, 12,507,426 (85.2 per cent) being men and 2,179,719 (14.8 per cent) women. (Later

figures give the total membership as 18,500,000).

A detailed table setting out the various orientations in the trade union movement shows that the total number of organized workers in all countries at the end of 1923 amounted to 36,439,320. Out of this total, 16,490,121 workers adopted the platform of the International Federation of Trade Unions, while 5,245,889 (principally in Russia) were affiliated to the Communist, 2,354,583 to the Clerical and 404,700 to the syndicalist trade union movements. The remaining 11,970,027 take a neutral standpoint.

From a survey of the number of organized workers in each country compared with the population figures, it appears that in Austria, out of every 100 inhabitants 17 per cent are trade unionists; Germany is next on the list with 15.3 per cent, followed by England 13.3 per cent, Australia 12 per cent, Czechoslovakia 11.1 per cent and Belgium 9.9 per cent. The following countries are stated to be among those where the trade union movement is so far very little developed: Argentine, Finland, Bulgaria, Portugal, Yugoslavia, Peru, Roumania, South Africa, Brazil, Japan, India (British Empire), Dutch East Indies, Egypt and China. In all these countries not more than 1.5 per cent of the population are organized workers.

The year-book contains tables with names, addresses and membership numbers of all the 835 organizations affiliated with the International Federation of Trade Unions, together with the names of their trade journals. There are also tables with addresses and membership figures of the organizations which compose the Trade Secretariats, a list of the organizations

catering for workers' education at the present time, and lists of the organizations affiliated with the Labour and Socialist International, the International Co-operative Alliance and the Young Workers' Socialist International. The year-book also contains, for the first time, detailed reports as to the position of the trade union movement in the various countries, written by leaders of the national centres.

Both as an address-book and as a statistical year-book this publication should be of service to persons actively engaged in the trade union movement.

International Seamen's Union of America

The International Seamen's Union of America has protested to the United States Government against the sale of five passenger steamships originally owned by the United States Government. It is contended that the sale of these vessels by the United States Shipping Board to the Dollar Steamship Company (which was recently decided by a vote of four to three of the Shipping Board) would mean that the American seamen now operating the ships would be replaced by Asiatics. The International Seamen's Union has been joined in their protest by the Illinois State Federation of Labour and the Chicago Federation of Labour.

Organized Women in Austria

Out of 57 trade unions of Austria, 49 organize women and only eight are without women members. In 14 of the 49 the women members are in the majority; in 25 more, more than 10 per cent of the members are women. The 14 unions where women are in the majority are the following: lawyers' assistants, bookbinders, hotel employees, sick nurses, cardboard workers, furriers, lithographers (including the workers in the cigarette case industry), tailors and dressmakers, textile workers, artificial flower makers and feather workers, unskilled printing operatives, bookshop assistants, hat makers and ready-made dressmakers, and domestic employees. The artificial flower-makers and the domestic employees consist wholly of women.

Trade Unionism in Japan

The total membership of trade unions in Japan, according to information contained in *Industrial and Labour Information*, amounts to only one-twentieth of the total number of wage-earners, which, excluding the rural districts, is something over 4,160,000. Figures from the Police Bureau, however, show that at the end of 1921, thirty years after the Japanese workers began to organize themselves, there were only 100,000 trade unionists

in Japan. At the end of 1923, according to the returns of the Bureau of Social Affairs, there were 430 trade unions with a total membership of 125,000. The adoption by the Government, early in 1924, of a new policy with regard to the nomination of the workers' delegate and advisers to the International Labour Conference by which the right of proposed candidates was confined to organized labour, and voting for candidates was based on the membership of the organizations, gave a great impetus to the growth of trade unionism, with the result that by the end of 1924 there were 500 unions with an aggregate membership of 230,000. It is also stated that apart from the new policy with regard to the nomination of the workers' delegation to the International Labour Conference (official information having confirmed the news that the Government will maintain this policy for the purpose of the 1925 Conference) several factors have contributed to the quickening of the spread of trade unionism in Japan. Among these are mentioned the attitude of the Government toward the protection and encouragement of workers' organizations, and the fact that the workers' movement has somewhat changed its course, abandoning its rather doctrinaire channels and turning more in the direction of practical organization.

Workers' Education Bureau of United States

Nearly 500 delegates from the United States, Canada and Europe, representing labour organizations, universities and colleges and various economic and industrial associations were present at the annual convention of the Workers' Education Bureau of the United States held at Philadelphia, Pennsylvania, on April 17, 18 and 19. The speakers included President Green of the American Federation of Labour; Matthew Woll, president of the International Photo-Engravers' Union; Morris L. Cooke, director of the Pennsylvania Giant Survey; Dr. A. W. Castle of the Pennsylvania State Department of Education, representing Governor Pinchot; Professor Jesse H. Holmes, professor of history at Swarthmore College; Professor James T. Shotwell, author of the Geneva Protocol and members of the faculty of Columbia University; Alfred MacGowan, representing the Workers' Educational Association of Canada; Gus de Mueyck, of the Belgian Workers' Education Centre; Canuto Vargas, Labour Attache of Mexican Embassy at Washington; James Maloney, president of the International Glass Blowers' Union, and John P. Frey, editor of *The Moulders' Journal*.

President Green in his remarks stated that "the trade union is the agency and education

is the method by which labour will make material and spiritual progress." He also said that "education offers the strongest hope for the promotion of collective bargaining and industrial peace—a peace of understanding based upon justice and equality."

In 1923, the American Federation of Labour gave official endorsement to the Workers' Education Bureau and in 1924 undertook to finance the Bureau by a levy upon the affiliated national and international unions. At the convention the Federation was given greater power in regard to the Bureau. It was decided that membership should be confined to unions affiliated with the Federation and to educational enterprises sponsored by them. In this way it was felt that outside groups which might be dominated by Socialist, Communist or capitalist philosophies would be excluded in order to develop a practical type of training for the immediate use of American unions.

In another resolution passed by the convention, labour unions throughout the country were urged to have labour candidates elected to school boards.

It was explained that an attempt was being made to have a scout movement backed entirely by labour unions launched in Pennsylvania and that a committee for this purpose had been formed with Mr. Maurer, the Bureau's president, at the head. A similar pioneer movement, it was stated, has been started in New York with 900 children of both sexes enrolled. The object of the movement is to promote health, strength, cleanmindedness, and a great respect for rugged, honest toil.

The president, James H. Maurer of Reading, Pennsylvania, and the secretary, Spencer Miller of New York were re-elected to office, and it was decided that the next convention should be held two years hence.

TRADE UNIONISM IN THE UNITED STATES

THE American National Bureau of Economic Research, as the result of a recent study of the growth of labour organizations in the United States, reports that trade unions approximately doubled their strength in the decade 1910-1920. One-fifth of the country's workers were members of labour organizations in 1920, as against one-tenth in 1910. Of the 26,080,689 wage-earners in 1920, 4,881,200 were trade union members; whereas in 1910, out of 22,406,714 wage-earners, 2,101,502 were trade unionists. The extent of organization of the workers in manufacturing industries varies from less than 1 per cent organized in the chemical and allied industries, to more than 57 per cent in the clothing industry. The great increase in the percentage of organization in this latter industry is one of the most striking features in industrial organization. The clothing industry was converted from one of the weakly organized industries in 1910 into the most strongly-organized in 1920. This is attributed

mainly to the growth of membership in the International Ladies' Garment Workers' Union after its strike in 1910, and to the rapid increase in membership of the Amalgamated Clothing Workers' Union after its organization in the last months of 1914.

The percentage of wage-earners organized in the various divisions of industry is as follows:

Industry	Per centage	Organ- ized
	1920	1910
Extraction of minerals.....	41.0	27.3
Manufacturing.....	23.2	11.6
Transportation.....	37.3	17.1
Building.....	25.5	16.4
Stationary engineers.....	12.4	4.6
Stationary firemen.....	19.9	9.6
Trade.....	1.1	1.0
Professional service.....	5.4	4.6
Clerical occupations.....	8.3	1.8
Domestic and personal service.....	3.8	2.0
Public service.....	7.3	2.5

Profit-Sharing in Norwegian Shipping Industry

The International Labour Office is informed that a Norwegian shipping company has decided to introduce a profit-sharing scheme as an incentive to its workers to remain in its employment.

Of recent years there have been many cases of desertion, especially on lines to America. The company in question has decided that for vessels in American service the crews shall receive 10 per cent of the net profits,

crews on vessels in both American and European services $7\frac{1}{2}$ per cent, and those on European services 5 per cent. The profits are to be shared equally among the crew, excluding the master.

The share in profits is made conditional on the employee having been in the service of the company eighteen months in the case of the American services, and for twelve months in the case of European service.

INSTITUTE FOR MUNICIPAL EMPLOYEES IN THE PROVINCE OF QUEBEC

MUNICIPAL employees in the province of

Quebec are taking steps to secure the incorporation under provincial law of a Mechanics' Institute and Library Association. The formal declaration of the purposes of the new organization are stated as follows:—

1. This association will assume the collective name of "The Benevolent and Pension Fund Association of Municipal Employees in the Province of Quebec."

2. The object of said Association is to advance and protect the interests of municipal employees in the province of Quebec, and especially of the employees of the city of Montreal and vicinity;

To raise the intellectual, moral, social, professional and material level of its members;

To protect the members in case of accident or death and help the widows and orphans of deceased members;

To tighten the bonds of fraternity among municipal employees in the province of Quebec;

To secure from transportation companies, telephone, trade and insurance companies and from other companies or persons just and equitable concessions and privileges;

To organize the knowledge, experience, theory, practice and scattered strength of municipal employees in the province of Quebec in their profession, to direct them towards a more perfect performance of their various duties and a more economic performance of their professional duties, for the greatest good of each one in particular and of all in general, and, for that purpose, to put a library at the disposal of its members;

To establish and maintain information bureaus to give the members of the Association all necessary information or references;

To have a meeting place where they can chat, rest, play various games, amuse themselves, in a word rest their minds and exchange useful and pleasant views.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities which have direct bearing on the training of apprentices and industrial workers are also noted. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Inter-provincial Conference on Vocational Education

A conference of representatives from the four western provinces met in Calgary on April 17 and 18 to discuss the problems of vocational education as they affect the work in British Columbia, Alberta, Saskatchewan and Manitoba. The meeting was called by the Federal Director of Technical Education at the request of the provincial officials responsible for the administration of secondary vocational education.

The purpose of the conference was to devise ways and means whereby the western provinces could co-operate in their efforts to develop suitable types of education and training for industrial workers in western Canada. The two main topics for discussion were evening school work and correspondence instruction.

Papers on the following subjects were read and discussed by all present:—

"Evening schools in Ontario," prepared by F. P. Gavin, Director of Technical Education for Ontario.

"Correspondence-Study Instruction," prepared by Dr. F. H. Sexton, Director of Technical Education for Nova Scotia.

"Some Problems of Vocational Education in Alberta," by W. G. Carpenter, Director of Technical Education for Alberta.

"Federal grants and vocational education," by A. W. Crawford, Federal Director of Technical Education.

The principal speaker at the conference was Dr. Charles A. Prosser, Director of Dunwoodie Institute of Technology, Minneapolis, who took an active part in the discussion and very materially added to the success of the gathering.

The conference unanimously adopted the following resolution, which marks a decided step forward in the development of vocational education in Canada:—

Whereas it is desirable that co-operative action be taken in the four western provinces in the formation of standard courses for vocational correspondence and evening schools and;

Whereas it is desirable that investigation be made of the feasibility of co-operative action along other lines of vocational education;

Therefore this Conference recommends that each of the four western departments of education appoint one representative to act upon an interprovincial vocational education committee for the purposes of:—

(a) Considering and reporting upon standard courses for correspondence and evening schools and indicating methods for their compilation and distribution.

(b) Reporting to the various departments upon the scope of interprovincial co-operation.

(c) Preparing the details of any scheme or agreement arising out of clauses (a) and (b) and submitting the same to the departments of education concerned.

It is expected that the committee will be appointed without delay and that definite programmes for co-operative action will be submitted to the governments within a few months.

Organized Labour and the Workers' Educational Association

Mr. H. G. Fester, President of the Workers' Educational Association of Hamilton, Ontario, states that the local executive committee is keenly disappointed as a result of the failure of members of labour organizations to attend classes of the association in Hamilton. Less than 10 per cent of the enrolment in these classes represented organized labour. The subjects studied were psychology, public speaking, economics, English literature and civil government and sociology.

Organized Labour's Educational Policy

Addressing a meeting of school superintendents at Cincinnati, Ohio, some days ago, Matthew Woll, president of the International Photo-Engravers' Union, asserted that, "Organized labour aims to end class lines in education." Mr. Woll explained that to a committee on education is delegated the responsibility of carrying into effect the federation's programme dealing with education in the public schools. He said in part:—

Our committee is seeking to get central labour unions to authorize local co-operating committees on education to be the agencies through which labour shall participate in the determination of educational policies and undertakings. We urge that local school boards shall consist of representatives of all groups directly concerned by public school education. Labour should be one of these groups. Our purpose is not contention or a desire to dominate, but the very proper motive to give representation to the views and desires of a major group in the community. Few will dispute the statement that traditional culture is regarded as something apart from the experience of the majority of workers. There are barriers both of experience and training barring their entrance. We wage earners want our schools to help us find the way to make of all callings and all work cultural experiences so that all our citizens may share in the richness of life that grows out of understanding and purposeful control over the elements that constitute the daily work. We want our public schools to contribute to the development of an attitude of mind that is active and critical, while at the same time appreciative of the significant and the fundamental. We ask your assistance to the end that our schools shall develop in students an active instead of a passive attitude. We know that is no easy proposition. It is the same problem expressed in educational terms as we must cope with in the industrial world when we try to change from quantity to quality standards. Through our workers' education movement we are seeking information that will enable us to make best use of wisdom gained through experience. We intend

to make our movement, which is a movement for human betterment, increasingly intelligent and purposeful, and the two agencies upon which we rely are organization and education.

A State Technical Institute for New York

A bill has been introduced in the New York State Senate providing for a temporary unpaid commission to investigate the desirability of a State Technical Institute. Good reasons for such an inquiry are set forth in a report prepared by Lewis A. Wilson, Director of the Division of Vocational and Extension Education of the New York State Education Department. His recommendations, which are the result of many careful studies of the industries of the State and of trade and technical schools in other States and in foreign countries, are worthy of serious consideration.

The industrial importance of New York State is not generally realized, he contends. Not only does the value of its manufactured products, estimated at over \$8,750,000,000 in 1919, exceed by a billion dollars the combined value of such products in all the New England States, but of the eighty-eight leading industries this State ranks first in thirty-seven, second in nine and third in eleven. These industries employed 1,500,000 people and paid in wages nearly \$2,000,000,000. Of the 49,000 plants, 95 per cent employ each not more than 100 workers. Industrial growth has been attended by a great increase in the urban population, the percentage of the total having risen in the last thirty years from 60 to 83. With such large interests at stake, it is urged that the State should give attention to the special educational needs of the thousands who are looking toward entrance into industry. New York is spending more than \$2,250,000 a year in support of institutions and agencies for developing agricultural products and market facilities and promoting the happiness and prosperity of those engaged in farming. But for the industries no direct aid is given except for the maintenance of a school in clay-working and ceramics at Alfred University. What is proposed is not an institution of college grade but one which will embrace:

- (1) A department of industrial information for those engaged or planning to engage in manufacturing in the State concerning markets, transportation facilities, electrical service, etc.;
- (2) a department of chemical and physical research for testing raw materials and finished products, and for studies of the adaptability of materials, substitutes and the utilization of waste products;
- (3) a department of statistical research to give a basis for forecasting industrial trends;
- (4) a department of factory construction;
- (5) a department of accounting and business methods; and finally (6) departments

of trade and technical training and management. We have depended upon Europe for a considerable supply of skilled workers, but the number now coming is "so small that it is a negligible factor in meeting the industrial needs of to-day". We must provide at home this kind of education for our own people.

Unemployment in India

The following extracts from the report of a committee appointed in 1922 to investigate unemployment among the Indian and Anglo-Indian middle class committees in Bengal are taken from the January *Labour Gazette*, Bombay:—

Remedial Measures.—We strongly recommend the immediate adoption of a comprehensive scheme for technical education (the term being used in its widest sense including vocational and industrial instruction).

(1) As a means to this end we strongly recommend that a Board of Technical Education should be established for the control of what may be described as training both theoretical and practical, for industry and commerce.

(2) The total Government grant for this form of education should be placed under the control of the Board subject to Government audit.

(3) The composition of the Board should be representative of industries and commerce as well as of the general public with a leaven of educationists.

General Education (Bengali Bhadrak).—(1) We recommend that (a) village education should be brought into the closest touch with village life, (b) instruction in the vernacular should be extended, (c) the simple facts regarding modern agriculture, sanitation, co-operation, etc., should be taught in the village schools, (d) the scientific side of school education should be developed to as great a degree as the literary side, (e) technical schools with small workshops attached should be started in the mofussil, (f) an experiment be made with one of the typical educational colonies, to test their practical usefulness.

(2) We recommend that (a) immediate steps be taken to raise the status of the teaching profession, (b) facilities for their proper professional training be made, (c) after the lapse of a reasonable period of time all grants-in-aid to schools should be given subject to the employment of properly qualified and trained teachers.

Technical Education.—(1) (a) We recommend that the Board of Control of Technical Education and Training mentioned before should prepare information regarding various occupations and place this information before parents and school children through the educational authorities and through the headmasters and teachers of schools. (b) We strongly recommend the development of evening continuation classes for those who have had to leave school at an early age. (c) As in the case of Bengali Bhadrak we recommend most strongly that the instruction in schools should be given a much more practical tendency and this recommendation we consider applies equally to the case of girls of this community. (d) We feel that the Anglo-Indian should make a much greater use of the existing facilities afforded by the Calcutta University. If, however, the present system of education is retained the gap in the system between the ages of 16 and 21 years should be filled up. (e) As in the case of the Bengali Bhadrak we are emphatically of opinion that the immediate development of the facilities for professional training of teachers and the proper recognition of the teaching profession are absolutely essential. (f) We appeal to those who are in a position to help finan-

cially to increase the extent to which the education of this community is endowed. (g) Our recommendations regarding the formation of a Board of Technical Education apply equally to this community.

We must strongly recommend that the new Calcutta Technical School should be opened as soon as possible and that the scope of its work should be extended to cover the developments obtained throughout the report.

Factors in Apprenticeship Training

The following article written by Mr. Frank Cushman, of the United States Federal Board for Vocational Education, appeared in the January issue of the *Vocational Education Magazine*:—

The following points have been agreed to in practically all cases where representative employers, labour leaders and school people have been brought together for a discussion of the apprenticeship problem.

1. Any successful plan for apprentice training should be based upon the co-operative effort of employers, organized labour, and the public schools. Where such co-operation has not been secured the attempts to set up an effective system of apprenticeship have been largely failures. Where a group of employers decide to have their own school without regard to the interests of labour, or at least without consulting labour and attempting to secure its co-operation, trouble usually results. Where labour organizations attempt to set up a programme of training for apprentices without the co-operation either of employers or of the public schools, results are not what they could be with such co-operation. Furthermore, there is no reason why a labour organization should pay the cost of training apprentices inasmuch as vocational efficiency is profitable not only to the man himself but to his employer and also to the community in which he lives. As a rule, where public schools offer training without securing the interest and support of both employers and labour the programme is not considered seriously. Too often trade instruction in the public schools has been unjustly condemned and discounted both by employers and employees because of the fact that school officials were attempting to deal with the problem without first having secured the support of the parties whose interests were most affected by the work.

A successful apprenticeship programme, therefore, must be the co-operative effort of employers, labour, and the public schools. While these three groups are perhaps the most important factor, there are other interests in every city which are usually ready and willing to co-operate in advancing a programme of apprenticeship for the building trades. In many places, architects have been the leaders; in others, manufacturers and dealers in building materials and supplies, engineers, real

estate men, and bankers have actively supported the movement.

2. Next to the need for securing the co-operation of the parties whose interests are affected by vocational efficiency in the building trades, the most important consideration is to make apprenticeship more attractive to boys through proper incentives. Much has been said recently about the breakdown of apprenticeship, the disappearing apprentice, and the need for doing something to direct boys away from "white collar" jobs. The trouble is not entirely with the boys. It is useless to blame the American boy for not becoming interested in learning a skilled trade. The skilled trades have not been made sufficiently attractive to him. Too few reasons could be advanced as to why an intelligent American boy should want to become an apprentice. The boys are all right and have just as much common sense as boys of past generations have had. All that is needed to secure an actual revival of interest in apprenticeship in the skilled trades is to make apprenticeship so attractive that it will compete with other lines of opportunities and other lines of employment. Where proper incentives have been supplied—such as a guarantee of opportunity to acquire a mastery of the trade, assurance of continuous employment during apprenticeship, and provision for acquiring manipulative skill in the trade and for learning what may be called the technical side of the trade through instruction supplementary to that received on the job—there has been no difficulty in securing apprentices. Some of these incentives are quite as potent in securing and maintaining the interest of a boy in becoming a skilled worker as the wages paid. High wages will not get and hold the right type of employee if the wage is the only incentive provided. Where apprenticeship is promoted on the basis that the apprentice will secure a real opportunity to become a master of his chosen craft, not only from the practical but also from the technical side, there is no shortage of boys who will become interested in the proposition. Such a complete training calls for both practical experience on the job and instruction in related subjects in a classroom, either through evening or part-time schools. Another point, boys who may be interested in becoming apprentices in the building trades are not ordinarily found in high schools. Many attempts to set up systems of apprenticeship have failed because of the unwarranted assumption that all the boys who might wish to become apprentices were already in high schools, and consequently the problem would be to interest some of these boys in a programme of apprentice training. In most cities not more than 20 to 30 per

cent of the boys who finish the elementary schools enter high school, and of those who enter, as a rule, only a relatively small percentage graduate. For the most part, therefore, it is useless to look for apprentices either among the small group who graduate from high school or among those who are expecting to finish their high school course. In this connection it is well to remember that dropping out of high school is not in itself an indication of inferior mentality.

The most encouraging thing about the present situation is the interest that national and local organizations are taking in apprenticeship. Apprenticeship is probably being conducted at this time in a more intelligent way than it has ever been conducted in the history of industry. While the present crisis was to a certain extent anticipated it is only within the last year or two that organizations of employers have become keenly interested in the problem. Organized labour, it should be pointed out, has always stood for thorough and adequate training of apprentices in all of the organized trades. Craft pride has been responsible in part for this. Real labour leaders have always been supporters of vocational education under public control for the purpose of keeping up desirable standards of workmanship in the various crafts, as well as for promoting the training of apprentices.

Each of the forty-eight States now has an organization which is ready to co-operate and to assist in every way in the promotion of better apprenticeship training. Funds are available for the purpose of defraying the expenses of such training. It was long ago recognized that the interest of the public in vocational efficiency justified the utilization of public funds for vocational education. The federal Government is doing its share in the promotion of this work, and it is also true that every one of the forty-eight states is doing or is prepared to do its share.

The one thing needed at this time to put in operation an adequate programme of apprentice training in all of the building trades is co-operation. While much can be done from a national standpoint, the problem is in many respects strictly a local one that must be worked out in each city according to the particular conditions there prevailing. Enough information as to what needs to be done is available to enable any city to set up and operate an effective programme, and any city that does not have within the next twelve months a real programme of apprenticeship in the building trades will have to take the blame upon itself. If the programme fails it will be due more to a lack of co-operation on the part of contractors, labour, and the public schools than to any other factor.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Industrial Accidents in Quebec

MR. ARTHUR GABOURY, manager of the Quebec Safety League, recently made a survey of the loss of time to employers and employees through industrial accidents. He estimated that the loss of time because of such accidents runs as high as \$6,000,000 a year in the province. In some cases the loss falls upon the employer, in other cases the loss is borne by the employee. This is in addition to other losses such as death claims, etc.

Recommendations of Coroners' Juries

On April 4, a workman employed in the yards of the International Coal and Coke Company of Coleman, Alberta, was electrocuted by taking hold of a ladder which came into contact with a high tension wire. The jury in rendering its verdict made the following recommendations: (1) that all ladders used in the vicinity of electrical wires be constructed of practically non-conducting material; (2) that the International Coal and Coke Company install a government telephone in a convenient place in the yards, to be used in case of accident and to phone the doctor.

The coroner's jury in connection with the death of a workman who fell from the fifth storey of a Toronto building in January last added a rider to its verdict urging the amending of by-law No. 9888 to provide greater protection to workmen on buildings.

The jury empanelled to investigate the death of a man run over by a Canadian Pacific Railway train on an overhead bridge on the Guelph highway attached no blame to the train crew but strongly recommended that the Canadian Pacific Railway have all its employees instructed and pass examinations in first aid and see that the same is applied in all accidents.

New Brunswick Lumbermen's Safety Association

At the first annual meeting of the New Brunswick Lumbermen's Safety Association reports were presented showing that much work had been accomplished by the Association in co-operation with the Government factory inspectors. Special mention was made of the work in the smaller mills and plants. The Association during the year sent out 45,000 safety pamphlets and leaflets in both the English and French languages, this literature going exclusively to lumbering and wood-working employees, urging greater caution to

prevent accidents. The association also circulated 6,000 copies in English and French of the Provincial Act requiring that all applicants for employment in the lumber woods should furnish certificates of vaccination, and holding the employer liable for any expense the Health Department might be put to in the event of a smallpox epidemic breaking out. Mr. F. C. Beateay was re-elected as president and Mr. W. E. Anderson as secretary of the Association.

Rules on Lead Poisoning in New South Wales

By an Act to amend the Workmen's Compensation (Lead Poisoning-Broken Hill) Act, 1922, which was assented to on November 17, 1924, provisions for workmen's compensation in New South Wales have been extended in regard to lead poisoning, and workmen who have been previously lead poisoned are now safeguarded against being refused work after they have been declared on re-examination to be physically fit to return to their employment. Provision is made for a workman who is in receipt of compensation to undergo curative treatment at the expense of the mine owner with the condition that any workman refusing to submit to such treatment shall have his right to compensation suspended until he undergoes such examination or treatment or continues such treatment to the satisfaction of the medical board. The Act of 1922 was passed as a result of recommendations of the Technical Health Commission in regard to the subject of lead poisoning and lead absorption in the Broken Hill mines. The Act provided for the constitution of a medical board consisting of three medical practitioners, one to be nominated by the mine owners, one by the workmen and a chairman. This board has the power to declare the necessity for the withdrawal from the industry of a workman who, after having been previously certified as suffering from lead poisoning, has recovered, but who, in the opinion of the board is susceptible to the action of lead.

The Human Factor in Industry

Dr. Charles S. Myers, Director of the National Institute of Industrial Psychology of Great Britain, in a recent lecture on "the Human Factor in Industry," said that until recently labour had been treated too much as a commodity and the worker as a machine. The futility of this attitude was becoming generally recognized. Business organization was dependent not only on the application of

mechanical and economical principles, but also on the realization of the importance of the human factor and of its improvement by the application of physiological and psychological principles. Careful instruction of the workers in the best movements yielded large increases in output and reduction of fatigue. He stated that a group of novices trained by the Institute showed an output greater by 21 per cent than that of a corresponding group trained by the instructor appointed by the firm. In another firm movement study and improvements in appliances increased output by 36 per cent, the workers spontaneously expressing their gratitude to the Institute's investigators because they were so much less tired at the end of the day than previously. Insufficient interest and attention were preventable by improved selection of the workers, the introduction of suitable incentives, adequate supervision, and the avoidance of unduly long, uninterrupted spells of work. Irritation was caused not only by felt injustice but by needless flurry and by needless waiting. In two firms the Institute reduced the breakage of articles by 53 and 44 per cent respectively, by removing the various sources of the workers' irritation and hindrance, and by improving the methods of handling the fragile material. By such attention to the human factor, not only were the quantity and the quality of output improved, but the health and the contentment of the workers were also increased. Strain and fatigue were lessened; absences through sickness became fewer; the

mental atmosphere of the factory, warehouse, and office improved; and the labour turnover which, when large, involved much wastage of money and time, was reduced.

Rock Dusting in Coal Mines

The *American Labour Legislation Review* states that "more progress has been made in the past two years towards bringing about the elimination of needless coal mine fatalities due to coal dust explosions than in all previous years added together. A decade and more has passed since the United States Bureau of Mines demonstrated that the simple and inexpensive device of rock dusting the mines effectively prevents coal dust explosion. That information for the most part lay unheeded in government reports while fatalities due to coal dust explosions have been increasing at an appalling rate. The Association for Labour Legislation undertook a nationwide campaign to bring about the adoption of the rock dusting safeguard. In 1922 less than half a dozen coal companies were found protecting their mines and miners with rock dust. By the end of 1924 more than fifty companies had rock dusted their mines or were beginning to install it, and the State of Utah took pioneer action in requiring the use of rock dust by all coal companies. An aroused public sentiment is now needed to bring this necessary measure of coal mine safety effectively to the attention of the state legislature."

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Canadian Delegation to International Labour Conference

THE seventh session of the International Labour Conference opened in Geneva on May 18. The Agenda of this Conference was published in the December, 1924, issue of the *LABOUR GAZETTE*, and includes the following subjects:—

- I. Workmen's Compensation.
- II. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents (final vote on the Draft Convention and Recommendation adopted by a preliminary vote of the Conference at its Sixth Session).
- III. Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).
- IV. Night work in bakeries (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).

The Canadian delegation in attendance at the Conference is as follows:—

Delegates representing the Government of Canada—

- Mr. H. H. Ward, of Ottawa, Deputy Minister of Labour for Canada.
 Dr. W. A. Riddell, of Geneva, Switzerland, Dominion of Canada Advisory Officer, League of Nations.

Technical advisers to the Government delegates—

- Honourable Forbes Godfrey, of Toronto, Ont., Minister of Health and Labour of the Province of Ontario.
 M. Pierre Beaulé, of Quebec, P.Q., President of the Confederation of Catholic Workers of Canada.
 Honourable Laureat Lapierre, of Quebec, Member of the Executive Council of Quebec.

Delegate representing the employers of Canada—

Mr. John Lowe, Jr., of Valleyfield, P.Q.,
General Manager, Montreal Cotton
Company, Ltd.

Technical adviser to the employers' delegate—

Mr. Hugh Macdonald, of Toronto, Ont.,
Legal Secretary, Canadian Manufacturers'
Association.

Delegate representing the workpeople of Canada—

Mr. P. M. Draper, of Ottawa, Ont., Secretary-Treasurer, Trades and Labour Congress of Canada.

Technical adviser to the workpeople's delegate—

Mr. Gustave Franco, of Montreal, P.Q.,
Chairman, Quebec Provincial Executive
Committee, Trades and Labour Congress of Canada.

Appointment of Mr. Norman MacKenzie

Mr. Norman MacKenzie, a Canadian now in attendance at Cambridge University, England, has been appointed as Assistant Legal Adviser in the International Labour Office (League of Nations), Geneva. The vacancy in this position occurred through the retirement of Mr. P. E. Corbett, of Montreal, who has returned to teaching work at McGill University. It was intimated by the Director of the International Labour Office that he was desirous of obtaining the services of a Canadian to replace Mr. Corbett, and the Honourable James Murdock, Minister of Labour, was asked to nominate a qualified person to act with Mr. Corbett, of McGill University, in judging the qualifications of the candidates who might apply. M. Jean Desy, of Montreal, was designated by the Minister of Labour to act with Mr. Corbett, and their report was forwarded to Geneva at the end of March. Mr. Norman MacKenzie is a graduate of Dalhousie University, Halifax, N.S., and has also studied international law in Harvard University. He won a fellowship in the latter entitling him to a year in the Law School of Cambridge University, England, where he is in residence at present.

The "Competent Authority" in Great Britain

In the British House of Commons on March 5 the question was asked how many International Labour Conventions agreed to by the British representative at Geneva are awaiting ratification and how many have been submitted under the terms of the Treaty to the "competent authority." Mr. Betterton, Parliamentary Secretary to the Ministry of

Labour, replied: "Of the Draft Conventions which have been adopted by the International Labour Conference, nine have not yet been ratified by this country. Of these, the British Government delegates at Washington, Genoa and Geneva, respectively, voted in favour of six, the vote being qualified in one case by a reservation. I am advised that the obligation under the Treaty, is fulfilled, if a Draft Convention is considered by the Crown, acting on the advice of the Executive Government, for the purpose of deciding whether or not it will ratify. This action has been taken in respect of all the Draft Conventions. Where a Convention, which it has been decided to ratify, involves an alteration in British law not already provided for by statute, Parliament has been and will be, asked to pass the necessary legislation before ratification takes place. Moreover, it has been the practice to bring these matters specially before this House in the form of resolutions asking for approval of the action of the Government."

In reply to the further question: "Are we fulfilling the terms of the Treaty, which says that the Convention should be laid before the competent authority for enactment or otherwise, merely by having it considered by the Cabinet, or is not this House the authority to which it should be submitted?" it was stated that this point was put to successive law officers, including the present Lord Chief Justice, and that in all cases the law officers decided that the Government were the competent authority.

8-Hour Day in Great Britain

A bill to establish a national 48-hour week in Great Britain in conformity with the Convention adopted by the first International Labour Conference, Washington, 1919, was introduced in the House of Commons by a member representing labour, but was defeated on May 1 by 223 votes to 128. The Government opposed the bill on the grounds that the principle involved was a matter of different interpretations in different countries and that application of the forty-eight-hour week would necessitate further international conferences.

France and the White Lead Convention

The French Chamber of Deputies, at its sitting on February 23, adopted two Bills providing, respectively, for the ratification of the Draft Convention concerning the use of white lead in painting (Geneva, 1921), and for the amendment of Chapter IV of Book II of the Labour Code, containing special provisions concerning the use of white lead in

painting. The latter bill is intended to bring the provisions of French law into conformity with those of the Convention.

Encyclopaedia of Health in Industry

The International Labour Office has in course of publication an "Encyclopaedia of Health, Pathology and Social Welfare from the standpoint of labour, industry and trades." The purpose of the Encyclopaedia is to collect the information existing in different countries in regard to unhealthy occupations and processes. The term "unhealthy" has been interpreted for this purpose in its widest sense, so as to cover not only toxic, infectious, and parasitic causes of disease but also all other causes capable of endangering the health and life of the workers. Three main groups of questions are dealt with: (1) the work; (2) the worker; (3) the environment. The "work" is analysed into its constituent elements, such as materials, industries, trades, and causes of disease, chemical, biological, etc. The "worker" is considered in relation to the products with which, and the environment in which he works. The "environment" is dealt with by general studies on subjects such as atmosphere, premises, heating, lighting, removal of dust, humidification, sanitary accommodation, etc. Certain articles are illustrated by photographs, sketches, diagrams, etc., showing recent innovations and improvements. Finally, the work is completed by a series of cross-references and an alphabetical table of contents which will facilitate the reader's inquiries.

The Encyclopaedia will appear first in the part form, each part comprising one or more articles. To enable the reader easily to preserve the parts and ensure that he possesses the complete series, the parts will not be distributed singly but grouped in temporary covers by fives, sixes or sevens according to their length, and numbered according to their order of publication. Subscription to the Encyclopaedia is \$8 for the volume and the same for the brochure edition; the latter edition will however be distributed free to all subscribers to the whole of the publications of the International Labour Office.

"Industrial Safety Survey"

The International Labour Office has just published the first number of a new periodical, *Industrial Safety Survey*, designed "to serve as a medium for the direct exchange of ideas and experience with regard to industrial accident prevention both between different countries and between employers, workers and factory inspectors."

At the Fifth Session of the International Labour Conference, (Geneva, 1923), which was

devoted to the question of factory inspection, strong emphasis was laid upon the part which should be played by any inspection service in promoting methods for preventing accidents and diseases. Some fairly precise suggestions on this matter were embodied in the Recommendation adopted by the Conference. In addition, the Conference adopted a resolution instructing the International Labour Office to make a survey of measures already in force in various countries for the improvement of health conditions and the reduction of the number of accidents. It is in the spirit of these decisions that the new publication has been launched.

The *Industrial Safety Survey* will be published every two months. Its columns will be open to the discussion of all subjects which have any bearing on the problem of the prevention of accidents. It will publish articles on technical developments in the sphere of accident prevention, articles discussing accidents of special interest and the lessons to be learned from them, and statistical studies on the progress of accident prevention in different countries or in different industries or processes. It will also report regularly on legislation, administrative regulations, and other measures of standardization in this sphere, show by discussion of the annual reports of factory inspectors what the public authorities are doing for the prevention of accidents, and carefully note all information it receives concerning the efforts made and results achieved by employers' and workers' organizations. Finally, by bibliographical notes and analyses, it will give up-to-date information concerning what is being written in books and periodicals on the subject of safety.

The first issue contains:—

▲ special article on "Safety Education in Industry" (illustrated).

Notes on the work of safety associations and institutions in Canada, France, Great Britain, and the United States

Summaries of rules relating to boiler inspection and inspection of high-pressure acetylene apparatus in Prussia, and the transport and storage of compressed gases in America.

Notes on articles concerning safety questions in various periodicals.

Short notices of recent new books on safety problems.

The *Survey*, it may be added, is being published simultaneously in English, French and German.

Great Britain and the Maritime Conventions

The British Government bill to provide for certain amendments to the Merchants' Shipping Act, to which reference was made in the last issue of the *GAZETTE*, passed its third reading in the House of Lords last month and

was sent to the House of Commons. This bill permits of the ratification by the United Kingdom of three Draft Conventions of the International Labour Conference as follows:—Draft Convention concerning unemployment indemnity in case of loss or foundering of a ship, Draft Convention fixing the minimum age for the admission of young persons to employment as trimmers or stokers, Draft Convention concerning the compulsory medical examination of children and young persons employed at sea.

Similar legislation was adopted by the Parliament of Canada last year subject to a condition that the same should become effective on proclamation of the Governor in Council.

On the third reading of the bill Lord Peel, on behalf of the Government, proposed an amendment that the expression "ship" should not include:—

Any tug, dredger, sludge vessel, barge, or other craft whose ordinary course of navigation does not extend beyond the seaward limits of the jurisdiction of the harbour or pilotage authority of the port at which such vessel is regularly employed, if and so long as such vessel is engaged in his ordinary occupation.

Lord Peel explained that if tugs, etc., were to forego their ordinary duties and go on sea voyages they would come under the Conventions. He was advised that the amendment would bring the law into conformity with the Conventions, and there would be no necessity to have any reservations. The difficulty arose because the Convention was in French, and was not very well translated into English. The French word "maritime" was translated by the English "maritime"; if it had been translated "sea-going," it would have been much clearer.

The amendment was agreed to.

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

THE Dominion Bureau of Statistics has recently issued reports on the bread and other bakery products industry, the brewing industry, the broom, brush and mop industry, the excelsior or wood wool industry, the hat and cap industry, the macaroni and vermicelli industry, the tobacco manufacturing industry in Canada in 1923. Previous reports in this series relating to other industries were outlined in the LABOUR GAZETTE for April, 1925, and previous issues.

Bread and Other Bakery Products Industry

The number of individual establishments operating in the bread and other bakery products industry in Canada in 1923 was 1,980 as compared with 1,865 in 1922. Of these 831 were in Ontario, 611 in Quebec, 116 in British Columbia and the Yukon, 112 in Alberta, 103 in Saskatchewan, 102 in Manitoba, 49 in New Brunswick, 49 in Nova Scotia and 7 in Prince Edward Island. The capital investment rose from \$25,551,612 in 1922 to \$28,231,856 in 1923, the value of the products from \$47,845,811 to \$48,859,478 and the number of persons employed from 10,455 to 10,906. Salaried officers numbering 184 received for their salaries, \$523,446; general superintendents and managers numbering 181 received \$363,009; technical experts, accountants, etc. numbering 70 receiving \$101,291; clerks, stenographers and salesmen numbering 964 received \$1,295,176; and employees on wages numbering 9,507 (8,493 males and 1,014 females) received \$9,966,986. The greatest volume of employment was in Ontario, where 364 males and 175 females were employed on salaries, which amounted to \$805,-

416, and 4,304 males and 551 females were employed on wages, which amounted to \$5,275,174. In Quebec there were employed 467 males and 63 females who received \$969,947 in salaries, and 2,398 males and 159 females, who received \$2,393,052 in wages. The total amount paid in salaries and wages was \$12,249,008. The average salary of all persons employed in the industry was \$1,632, and the average wage paid was \$1,048. Maximum employment was reached in the month of September, when 9,729 persons were employed, of whom 8,667 were males and 1,062 were females. The month of minimum employment was January, with a total of 9,138 persons, of whom 8,177 were males and 961 were females. The average number employed monthly was 8,493 males and 1,014 females. The average number of days the plants were in operation was 295.35; the average hours worked per day was 8.6 and per week 51.2.

The Brewing Industry

The report on the brewing industry shows 52 establishments in operation during the year. This was a decrease of one over the previous year. By provinces they were located as follows: Ontario 19; British Columbia 10; Quebec 9; Alberta 5; Manitoba 4; New Brunswick 2; Nova Scotia 2; Saskatchewan 1. The capital invested in the industry in 1923 was \$38,384,708, as compared with \$34,788,432 in 1922, and the value of the products was \$29,260,243 in 1923 and \$25,875,730 in 1922. Employees on salaries in 1923 numbered 537 (479 males and 58 females), their salaries amounting to \$1,336,677. Employees on wages numbered

2,563 (2,530 males and 33 females), who received in wages \$2,971,873. The total number of employees rose from 2,857 with a payroll of \$3,903,240 in 1922, to 3,100 in 1923, with total earnings of \$4,308,590, this increase of 243 persons involving an additional expenditure of \$405,130 on account of salaries and wages during the two year period. Of the total employees, 55 were salaried officers of corporations, with earnings amounting to \$325,201; 75 were general superintendents and managers who received \$301,694; 82 were technical experts, chemists, accountants, etc. with earnings amounting to \$216,769; 325 were clerks, stenographers, salesmen, etc. with earnings amounting to \$493,013; and 2,563 were employees on wages with earnings totalling \$2,971,873. The maximum employment occurred in August, when 2,901 persons were employed, and the minimum employment was in January with 2,250. The number of days each establishment was in operation on full time averaged 275.1, on part time 13.8 and idle 15.1, and the number of hours worked by wage earners per day or shift was 8.9 and per week 51.8.

The Broom, Brush and Mop Industry

There were 79 establishments in the broom, brush and mop industry in Canada in 1923. Of these 45 were in Ontario, 23 in Quebec, 4 in British Columbia, 2 in Manitoba, 2 in New Brunswick, 1 in Alberta, 1 in Nova Scotia and 1 in Prince Edward Island. The capital invested in the industry was \$3,543,561, this being \$2,955 less than the total given for the previous year, while the value of production rose from \$3,909,370 in 1922 to \$4,577,319 in 1923, showing an increase of \$667,949.

The total number of employees in all classes rose from 1,194 in 1922 to 1,340 in 1923, an increase of 146. The payroll also showed a corresponding increase of \$164,422 over the two year period. There were 28 salaried officers of corporations who received for their services \$118,030; 45 general superintendents and managers who received \$104,694; 14 technical experts, accountants, etc., who received \$20,319; 158 clerks, stenographers, salesmen, etc., who received \$232,530; 1,093 employees on wages who received \$844,799, and 2 outside pieceworkers who received \$141. Employment reached its maximum in April, with 1,181 employees while the minimum number reported was 977 in July. The average number of days in operation on full time during the year was 251.5, on part time 9.4, and idle 43.1. The hours worked by wage earners per day or shift was 8.6 and per week 50.

The Excelsior or Wood Wool Industry

Nine establishments were in operation in the excelsior industry throughout the year, of which five were located in Ontario and one each in Manitoba, New Brunswick, Nova Scotia and Quebec. With one exception these mills were engaged exclusively in the manufacture of excelsior or wood wool and their products represent practically all of this material made in Canada. There are, however, a few cases where saw-mills, planing mills and other wood-working factories manufacture excelsior as a side line or a by-product when market conditions are favourable. The total value of the products for the year was \$86,990 and the total amount of capital invested was \$125,277. Employment was given to four salaried employees and an average of thirty-two men and three women on wages. The total payroll in 1923 amounted to \$25,671.

Hat and Cap Industry

The number of establishments reporting operations in the hat and cap industry in Canada during 1923 was 102 allocated by provinces as follows: Ontario 49, Quebec 34, Manitoba 8, Alberta 3, British Columbia 3, New Brunswick 3, Nova Scotia 1, Saskatchewan 1. This increase of 31 establishments over the number operating in 1922 is attributed to the fact that factory-made millinery is included in the report for 1923, but was formerly included in the Bureau's reports on women's factory clothing. The total capitalization rose from \$4,477,593 in 1922 to \$5,865,733 in 1923, an increase of \$1,388,140. During the same period the net value of production rose from \$7,624,450 to \$9,968,321, an increase of \$2,343,871. The total number of employees of all classes in 1922 was 2,100, \$2,237,027 being paid in salaries and wages. In the following year the number reported had risen to 3,085, with a total payroll of \$3,238,997, an increase of 985 employees, and of \$1,001,970 in salary and wage payments. Salaried officers of corporations during 1923 totalled 76, their salaries amounting to \$225,048; general superintendents, managers, etc. numbered 77 these receiving \$216,191; technical experts, accountants, etc. numbered 35 their salaries amounting to \$63,417; clerks, stenographers, salesmen, etc. numbered 300 their salaries totalling \$326,593; employees on wages numbered 2,580 (1,069 male and 1,511 female) these receiving \$2,404,101, and outside pieceworkers numbering 17 females received \$3,647. Employment reached its maximum in March, with 2,700, while the minimum number employed was 2,359 in June. The average number of days the factories were in operation on full time during the year was 251.3; on part time 29.1, and idle 23.6. The

average number of hours worked by wage earners per day or shift was 7.8 and per week 43.8.

Macaroni and Vermicelli Industry

Nine establishments reported operations in the macaroni and vermicelli industry in Canada during 1923, of which 4 were in the province of Ontario, 2 in Manitoba, 2 in Quebec and 1 in British Columbia, this being an increase of 1 over the number reported for 1922. In 1922 the production was 14,417,309 pounds, valued at \$1,318,037 while for the period covered by this report the amount was 11,805,386 pounds, valued at \$1,000,334, a decrease of 2,611,923 pounds in quantity and of \$317,703 in valuation. There was a slight increase in the total capitalization, the amount reported for 1922 being \$1,054,717, while for the year 1923 the total was \$1,091,171, an increase of \$36,454. The total number of employees fell from 239 in 1922 to 234 in 1923, a decrease of 5. Similarly the payroll showed a corresponding decrease. In 1922 the total salary and wage payments were reported at \$198,847, while for the period covered by this report the amount was \$194,483, a decrease of \$4,364. One salaried officer of corporations received \$1,200; general superintendents, managers, etc., numbering 11 received \$28,012; technical experts, accountants, etc. numbering 2 received \$2,276; clerks, stenographers, salesmen, etc. numbering 36 received \$40,324, and employees on wages numbering 187 (100 male and 87 female) received \$122,671. The month when employment reached its maximum was March with 216 and the lowest month recorded was December with only 97. The average number of days the establishments were in operation on full time was 280.7, on part time 12.4, and idle, 10.9. The number of hours worked by wage earners per day or shift averaged 9.6 and per week 56.9.

The Tobacco Manufacturing Industry

The statistics of the tobacco manufacturing industry are divided into two groups (1) establishments whose principal product is cigars or cigarettes, and (2) factories whose chief product is smoking or chewing tobacco and snuff. In group (1) there were 111 active establishments, and in group (2) 37 factories were reported, making a total of 148 establishments, which was an increase of 6 over the total number reported for the previous year. The province of Quebec took first place in both groups, with a total of 81 establishments, being 54.7 per cent of the total for the Dominion. Ontario came next with 46 factories, or 31.0 per cent, whilst British Columbia came third with 11 plants or 7.4 per cent. Manitoba and Prince Edward Island

with three each took fourth place whilst Alberta with 2, New Brunswick and Nova Scotia with 1 each followed next in order.

The total value of all tobacco produced during 1922 was \$62,626,960 and in 1923, \$59,840,010. In cigar and cigarette factories the value of the output decreased to the extent of \$3,889,700 during the two-year period. In smoking and chewing tobacco factories there was an increase for the same period of \$1,102,750. The province of Quebec again led in the matter of production with a combined output from all factories of \$53,708,024 or 92.7 per cent of the total value of all tobacco manufactured in the Dominion. The total capital invested in all tobacco factories in 1922 was reported at \$43,859,914. For 1923 the amount was \$44,348,333, an increase of \$488,419. By classes of factories the capital employed in establishments making cigars and cigarettes fell from \$31,482,001 in 1922 to \$31,312,210 in 1923, a decrease of \$169,791. In plants engaged in the manufacture of smoking and chewing tobacco and snuff the capitalization rose from a total of \$12,377,913 in 1922 to \$13,036,123 in the following year, an increase of \$658,210 during the two-year period. In cigar and cigarette factories employment was at its maximum in October with 5,691 while the minimum number reported was in January with 4,936. In smoking and chewing tobacco and snuff factories the month with the highest number of wage earners was July, with 2,252, while the lowest number recorded was 1,718 for the month of February. The total number of employees rose from 8,574 in 1922 to 8,780 in 1923, an increase of 126. The payroll also rose from \$7,423,503 in 1922 to \$7,567,673 in 1923, an increase of \$144,170. In cigar and cigarette factories the employees show an increase of 17, with an expansion in the payroll of \$54,051 over the total reported for the previous year, while in smoking and chewing tobacco and snuff factories the increase amounted to 109 employees and \$90,119 in salaries and wages during the same period. In the cigar and cigarette factories there were employed 55 persons who received in salaries and wages \$340,293; 75 general superintendents and managers who received \$229,006; 30 technical experts, accountants, etc., who received \$54,713; 946 clerks, stenographers, salesmen, etc., who received \$1,465,292; and 5,302 wage-earners (2,004 male and 3,298 female) who received \$3,391,864. There were also employed three outside pieceworkers who received \$650. In the smoking and chewing tobacco and snuff factories there were employed 24 salaried officers of corporations who received \$159,052; 53 general superintendents and managers who received \$157,865; 12 technical experts, account-

ants, etc., who received \$42,512; 175 clerks, stenographers, salesmen, etc., who received \$507,956; 2,017 wage-earners (808 male and 1,209 female) who received \$1,216,982; and 8 piece workers who received \$1,488.

The average number of days the cigar and cigarette factories were in operation on full time was 235.8, on part time 31.8 and idle

36.4. The average number of hours worked by wage-earners per day was 8.3 and per week 46.3. The smoking and chewing tobacco and snuff factories were in operation on full time an average of 260.4 days, on part time 15.6 days, and idle 28.0 days, and the hours worked by the wage earners per day averaged 8.9 and per week 49.9.

WAGES AND HOURS OF LABOUR IN THE PULP AND PAPER INDUSTRY IN THE UNITED STATES, 1923

The United States Bureau of Labour Statistics has recently issued a report on Wages and Hours of Labour in the Pulp and Paper Industry in the United States, 1923, No. 365, in its series on "Wages and Hours of Labour." The report covers 199 establishments in various States containing 35,799 male wage earners and 3,262 female wage earners, comprising 90 per cent of the total number of wage earners in the pulp and paper mills of the United States.

Mills manufacturing soda fibre pulp, and those manufacturing manila (rope, jute, tag, etc.), heavy wrapping, straw, bogus, or wood manila paper were not covered.

In addition to tables showing in detail, for each branch of the industry, the average hours per week, earnings per hour, and earnings per pay period of employees by occupation, sex, length of pay period, and region, the report contains a brief history of the industry, a description of operations and equipment, a glossary of occupations, and general information relating to changes in wage rates, over-time pay, bonuses, etc. The principal facts that are brought as to wages and hours are summarized in the report as follows:—

In pulp manufacturing the average full time hours per week range from 50.3 in New England to 67.3 in Louisiana. The average full time earnings per week range from \$18.37 in Louisiana to \$27.41 in Pennsylvania, Maryland and Virginia. The average earnings per hour range from 27.3 cents in Louisiana to 49.1 cents in Michigan and Ohio.

In book paper manufacturing the average full time hours per week range from 50.2 in New England to 53.4 in Pennsylvania, Maryland and Virginia. The average full time earnings per week range from \$22.78 in Louisiana to \$27.98 in New York. The average earnings per hour range from 44.5 cents in Wisconsin and Minnesota to 53.7 cents in New York.

For newsprint mills the average full time hours per week range from 48.1 in New England to 51.9 on the Pacific coast. The aver-

age full time earnings per week range from \$27.09 on the Pacific coast to \$32.03 in Michigan and Ohio. The average earnings per hour range from 52.2 cents on the Pacific coast region to 65.9 cents in Michigan and Ohio.

For wrapping paper mills the average full time hours per week range from 48.6 in New England to 59.5 in Pennsylvania, Maryland and Virginia. The average full time earnings per week range from \$24.83 in Wisconsin and Minnesota to \$28.58 in Michigan and Ohio. The average earnings per hour range from 46.5 cents in Pennsylvania, Maryland and Virginia to 57.8 cents in New England.

For writing paper mills the average full time hours per week range from 49.1 in New England to 56.1 in Pennsylvania, Maryland and Virginia. The average full time earnings per week range from \$21.81 in Wisconsin and Minnesota to \$31.53 in Pennsylvania, Maryland and Virginia. The average earnings per hour range from 42.6 cents in Wisconsin and Minnesota to 56.2 cents in Pennsylvania, Maryland and Virginia.

Workmen's Compensation in South Australia

The new Workmen's Compensation Act of South Australia received the assent of the Governor on January 15, 1925. It embraces within its provisions employees of every class, including domestic servants, clerks and pastoral and rural workers who were either wholly or partially excluded by the former Act. The minimum amount payable to dependents in the event of the death of a workman has been increased from £200 to £400 and the maximum from £400 to £600. The weekly compensation payment has been increased by adding to the original allowance, which was 50 per cent of the workmen's average weekly earnings, the sum of 7s. 6d. for each child who is dependent or mainly dependent upon the injured worker.

STANDARD BASIC WAGE IN QUEENSLAND

THE Court of Industrial Arbitration of Queensland, Australia, last December appointed a special commission composed of the following members: James Thomas Sutcliffe (chairman of the economic commission on the Queensland basic wage), Professor R. C. Mills, LL.M., D.Sc., Dean of the Faculty of Economics, University of Sydney, and Professor J. D. Brigden, B.A., Professor of Economics, University of Tasmania, members of the said economic commission. The commission was to make a report on the following questions: 1. The productivity of Queensland year by year from 1913 to 1924, and the estimated productivity for 1925. (2) Real wages compared with productivity for the same periods. (3) To what extent is it practicable in adjusting wages to have regard to variations in productivity. (4) Whether an increase of wages would be likely to affect adversely the growth of any, and what Queensland industries. (5) What would be the probable reactions of an increase in the basic wage? (6) Such other matters of an economic nature as in the opinion of the commission may be of assistance to the court in determining the basic wage.

The report of the commission is given in full in the *Queensland Industrial Gazette*, March 24, 1925. It contains recommendations which are summarized as follows:—

(1) The chief guide to be followed by the court in declaring a standard basic wage for industries of "average prosperity" should be the capacity of industry to pay wages. Cost of living should not be taken into account after capacity to pay has been ascertained.

(2) Capacity to pay should be determined from figures showing changes in income per head, past production per head, and future production per head, of Queensland.

(3) An index of capacity to pay so determined should be the principal guide, but reference should also be made to such matters as productive efficiency, unemployment, and rates of wages in neighbouring States.

(4) The method recommended for obtaining an index of capacity to pay is as follows: An index of the value of material production per head, for the year preceding the year in which the declaration of the standard basic wage is made, is added to an index of the prospective value of material production per head for the year in which the declaration is made. The average of the two will then give the required index. If, however, a satisfactory figure of income per head can be obtained it should be used in conjunction with the first figure of the value of material production per head.

(5) Arrangements should be made for the collection, analysis, and tabulation of the necessary information upon which to base the index of the capacity to pay.

(6) The time for the annual declaration of the standard basic wage should preferably be August or September, when material information is best available.

(7) In varying the standard basic wage for industries of more or less than average prosperity the court might consider whether it is practicable to fix craft wages as a percentage upon general rates in each industry.

(8) In determining the differences between industries, the income derived from particular industries might be ascertained from the income tax returns. Such amounts should be related to the growth of the industry and the variations in the general index.

(9) Consideration should be given to piece-rates as a method of maintaining or increasing capacity to pay.

(10) Suggestions are made for the establishment of a modified scheme of discrimination between wage earners, according to family needs, with greater equalization of receipts by men in different industries as an incidental effect.

In regard to the last suggestion, concerning the family wage, the commission points out that the wage discrimination in regard to family needs is already practised in some European countries following recent increases in family budgets of cost of living. The scheme the commission suggests is as follows: "The number of children for which payments are to be made should be estimated and a fund created. Payments into this fund may be made in various ways, but it is here presumed that they will be made by employers. One method of payment by employers would be to deduct from all wages whatever sum per employer may be necessary to provide the fund. It is therefore suggested that the court should fix the amount payable into the fund. Industries of average prosperity would pay the normal amount, while other industries would pay more or less than this. Industries only able to pay the "Harvester equivalent" (this term is explained below) would pay nothing at all into the fund."

Functions and Methods of the Court

Under the Queensland Industrial Arbitration Act of 1916, the court was empowered *inter alia* to fix "the minimum rate of wages to be paid to persons of either sex," subject to the condition that "the minimum wage of an adult male employee shall be not less than is sufficient to maintain a well-conducted employee of average health, strength, and competence, and his wife and a family of three children in a fair and average standard of comfort," and to the further condition that "the minimum wage of an adult female employee shall not be less than is sufficient to enable her to support herself in a fair and average standard of comfort." The act provided that the court, in making awards fixing the rate of wages in any calling, "shall be entitled to consider the prosperity of the calling

and the value of an employee's labour to his employer in addition to the standard of living, but in no case shall a rate of wages be paid which is lower than the minimum wage declared by the court."

Three main "standards of comfort" had been put forward in Australia as guides in fixing wages by public regulation. The first was adopted in 1907 by Mr. Justice Higgins, president of the Commonwealth Arbitration Court, in the *Harvester* case. He took as his standard "the normal needs of the average employee regarded as a human being living in a civilized community". This he interpreted as applying to a family of about five persons—a man, wife and three children, and he found that a minimum wage of seven shillings a day was necessary to meet these needs. In New South Wales in 1914, Mr. Justice Heydon took a family unit of man, wife and two children as a basis for the minimum living wage, on the ground that the average family of married employees was statistically 1.8 children. The Board of Trade of New South Wales was subsequently empowered to declare periodically the "cost of

living" for such a family, which when published in the *Government Gazette* may become the basic wage for New South Wales. The third standard was that adopted by the Basic Wage Commission in its report of 1920. The family unit taken was a man, wife, and three children, and the commission found that the cost of living was on an average about 25 per cent above the *Harvester* precedent.

The court made its first formal declaration of a standard basic wage in February, 1921, after a review of the Commonwealth Arbitration Court's basic wage, the New South Wales basic wage, and the report of the Basic Wage Commission. The standard basic wage was to apply only to industries of average prosperity, and the court made it clear that any application for a higher or lower minimum would have to be justified by special circumstances. In its declaration of a standard basic wage in 1921 and 1922, and in awards in particular industries the court always had in mind the *Harvester* standard and has never awarded a rate for Queensland below its equivalent.

Compulsory Labour in Bulgaria

Since its creation in 1921, the Bulgarian Compulsory Labour Department has undergone certain modifications; among others, compulsory labour for women and young girls has been completely abolished. For men temporary labour service is required not exceeding ten days' work per annum, for all Bulgarians between the ages of 20 and 40 years; there is also a regular service for Bulgarian citizens between the same ages who have not served in the army. The Compulsory Labour Department of Sofia supervises the application of the system, the object of which is, among other things, to organize the labour of the country in such a way as to develop production and public works, and to educate the people in collective labour, with a view to the improvement of general social well-being.

According to information furnished by the department, the number of eight-hour days worked during the previous year was 591,914. These figures include 409,154 days' work done for the railway administration. The regular workers have built 11 bridges, 63 drainage canals and four fountains, have repaired 15 drainage canals, and have constructed 175,280 kilometres of new roads, 153,678 kilometres of paved roads, etc.

As regards railways, the following work has been carried out: 8 railway bridges; 25 drainage canals; 38 buttress walls; 187,462 square metres of platform for stations; 5,690 kilometres of Decauville railways, etc.

The Compulsory Labour Department is at the moment supervising the work in the following undertakings: shoemaking and tailoring establishments at Gornia-Bania, brick works at Sofia, and three forestry undertakings in the mountains.

The Superior Labour Council of Bulgaria has decided to raise to 23,000 the number of persons legally subject to compulsory labour. These will be chosen among young men under 25 years of age.

The object of this increase is to allow completion during 1925 of new railways and roads. Of the 23,000 persons conscripted for compulsory labour, 11,000 will be employed on the construction of railroad lines, 8,000 on roads, and 4,000 will work on State farms and in State workshops. The daily wage of these conscripted workers will be 50 leva. At the present rate of exchange 50 leva equals 37 cents in Canadian currency.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF APRIL, 1925, AS REPORTED BY EMPLOYERS

THERE was a slight increase in employment at the beginning of April, according to reports received by the Dominion Bureau of Statistics from 5,830 firms, these firms reporting an aggregate payroll of 718,524 persons as compared with 718,162 workers on March 1. The improvement, though not pronounced, is interesting because in the past four years employment has shown a decline at this time of year. The index number, based on the numbers employed on January 1, 1920, as 100, stood at 87.2 on April 1, 1925, as compared with 87.0 in the preceding month and with 89.3 on April 1, 1924, 87.6 in 1923, 80.6 in 1922, and 84.1 in 1921. The accompanying chart reflects the changes in employment since 1923.

The outstanding changes in the situation at the beginning of April were marked gains in manufacturing and heavy seasonal contractions in logging. Other industries showed a generally upward movement.

Employment by Provinces

The Maritime Provinces, Quebec and British Columbia reported increased activity, while employment declined slightly in Ontario and the Prairie Provinces.

Maritime Provinces.—Further gains were indicated in manufacturing as a whole; iron and steel showed the most improvement, but lumber mills were slacker. Shipping and stevedoring, building and highway construction were more active, while logging, railway operation and construction afforded less employment. The payrolls of the 514 reporting firms aggregated 62,223, as compared with 60,928 on March 1. At the beginning of April, 1924, there had been increases on a slightly larger scale.

Quebec.—Employment in Quebec showed another though smaller gain, 391 persons being added to the working force of the 1,245 firms making returns, the staffs of these firms totalling 197,928 on April 1. The iron and steel, clay, glass and stone, textile, pulp and paper, lumber, mining, building and trade industries registered the largest gains. Logging, however, suffered considerable seasonal curtailment, and railway operation and construction recorded smaller payrolls. On April 1, 1924 and 1923, there had been pronounced declines in employment.

Ontario.—Heavy seasonal losses in logging camps caused an unfavourable balance of employment in Ontario. There was, however,

pronounced recovery in manufacturing, especially in iron and steel, lumber and textiles. Mining, communication, construction, transportation, services and retail trade also reported improvement. A combined payroll of 301,641 persons was indicated by the 2,698 firms whose statements were tabulated. On March 1 they had 302,793 employees. The contraction in employment noted on April 1, 1924, greatly exceeded the loss in the present year, but the employment index number was higher in 1924.

Prairie Provinces.—In this district also logging showed decided reductions, which were partly offset by additions to staffs in construction and manufacturing. Reports were received from 774 firms, employing 89,844 persons as compared with 90,705 persons in the preceding month. This decrease is much smaller than that registered on the same date of last year or of 1923.

British Columbia.—Manufacturing, especially of lumber products, showed considerable improvement; coal mining and railway construction also were more active, while logging and construction reported contractions. The working force of the 599 firms making returns increased from 66,199 persons on March 1 to 66,888 at the beginning of April. Somewhat more extensive gains took place in the corresponding period of last year, but the index number then was slightly lower.

The following table gives index numbers of employment in the five economic areas into which the country is divided.

Number Employed, January, 1920 = 100

District	Relative Weight*	Apr. 1, 1925	Mar. 1, 1925	Apr. 1, 1924	Apr. 1, 1923	Apr. 1, 1922	Apr. 1, 1921
Maritime Provinces....	8.7	83.4	81.7	84.6	90.5	80.6	87.2
Quebec.....	27.5	89.8	89.6	91.5	85.5	77.5	80.4
Ontario.....	42.0	84.9	85.0	87.6	88.4	81.1	83.5
Prairie Provinces.....	12.5	84.1	85.0	87.0	83.5	82.1	88.7
British Columbia.....	9.3	100.1	98.1	99.6	92.8	85.9	88.1
Canada.....	100.0	87.2	87.0	89.3	87.6	80.6	84.1

*The term "Relative weight" is explained in the last paragraph of the accompanying text.

Employment by Cities

Montreal, Quebec, Toronto and Winnipeg recorded increased activity, while in Ottawa, Hamilton and Vancouver very little change in the situation as a whole was indicated.

Montreal.—There was general improvement in Montreal, manufacturing, transportation, construction and trade showing the largest gains. Within the manufacturing division, the most important increases were in iron and steel, textiles, clay, glass and stone and printing establishments, while tobacco plants were slacker. The 693 firms reporting employed 100,775 persons or 2,131 more than on March 1. Slightly greater expansion was recorded on April 1, 1924, when the index number was a few points above its present level.

in textiles, iron and steel were offset by losses in clay, glass and stone and electrical appliance works. On April 1, 1924, additions to staff were noted, and the index number was higher.

Winnipeg.—After five months of uninterrupted declines in Winnipeg, the trend of employment at the beginning of April was favourable. Manufacturing and construction showed the most marked gains. A combined pay-roll of 23,772 persons was employed by the 296 reporting firms, who had 23,446 work-

Quebec.—Construction was more active than in the preceding month, while in leather factories reductions in personnel were noted. Reports compiled from 89 employers showed that the working forces aggregated 8,654, as compared with 8,174 on March 1.

Toronto.—Firms in Toronto indicated the largest increase on record, 3,303 persons being added to their staffs since March 1. They employed 91,674 workers on the date under review. Manufacturing generally was decidedly more active, especially in the iron and steel and textile divisions. Trade, communication, construction and transportation also registered improvement. The increases in staff recorded on April 1, 1924, were very much smaller, and the situation then was rather less favourable.

Ottawa.—There was practically no change in the general situation in Ottawa, according to 130 firms, who employed 9,334 persons on April 1, as compared with 9,348 in the preceding month. There were small gains in lumber mills offset by slight reductions in pulp and paper. A fairly large increase in personnel was indicated on the same date of last year, when activity was somewhat greater.

Hamilton.—Employment in this city also remained stationary on the whole; the 197 reporting establishments had 24,366 workers or 29 more than on March 1. Improvement

on March 1. There were contractions on April 1 of last year, and the index then was slightly below its present level.

Vancouver.—Improvement in manufacturing and some other industries was offset by a reduction in road construction, with the result that employment on the whole showed no change. Statements were tabulated from 228 employers having 22,417 workers. Substantial additions to staffs were indicated at the beginning of April, 1924, but employment then was not as active as at the present time.

The following table gives index number of employment by cities:—

Number Employed, January, 1920 = 100						
City	Relative weight	Apr. 1, 1925	Mar. 1, 1925	Apr. 1, 1924	Apr. 1, 1923	Apr. 1, 1922
Montreal.....	14.0	88.5	86.7	90.1	83.3	76.0
Quebec.....	1.2	98.4	93.2
Toronto.....	12.8	85.1	81.8	84.8	86.7	82.7
Ottawa.....	1.3	87.5	86.6	90.9	90.6
Hamilton.....	3.4	80.3	80.1	85.2	88.4
Winnipeg.....	3.3	83.7	82.7	82.3	85.7	83.6
Vancouver.....	3.1	102.5	101.8	99.8	86.9	93.1

Manufacturing Industries

There was further pronounced recovery in this division; the staffs of the 3,798 manufacturers reporting were enlarged by 10,945 operatives to 415,500 on April 1. This in-

crease greatly exceeds that recorded at the beginning of the same month of last year, although the index number then was slightly higher than at the present time. The most marked gains were in iron and steel and in lumber, textiles, clay, glass and stone, pulp and paper and rubber, while the only significant declines took place in tobacco and electrical apparatus plants.

Animal Products—Edible.—For the first time since the beginning of September, 1924, there was an increase in employment in this division, exceeding that recorded on the same date of last year. Fish canning, smoking and curing plants and dairies were busier. An aggregate pay-roll of 12,685 persons was employed by the 146 firms making returns; they had 12,510 employees on March 1. The bulk of the recovery was in British Columbia, Quebec and the Maritime Provinces.

Leather and Products.—Boot and shoe factories were less fully engaged, but leather tanning and preparing works recorded moderate improvement. Firms in Quebec showed reductions, while additions to staffs were noted in Ontario. Statements were tabulated from 195 manufacturers, having 16,471 operatives as compared with 16,479 at the beginning of March. Practically no change in the situation was indicated at the beginning of April of a year ago.

Lumber and Products.—Lumber mills were decidedly busier, as were also container, furniture and wooden vehicle factories. The 707 employers making returns increased their payrolls from 39,912 persons on March 1 to 41,796 at the beginning of April. This expansion of 4.7 per cent is very much larger than that recorded on April 1, 1924, when the level of employment was practically the same as at the present time. The greatest gains during the month under review were in Ontario and British Columbia.

Plant Products—Edible.—The production of starch and glucose afforded more employment, while fruit and vegetable canneries were also more active. Flour mills, however, were slacker. The increases were fairly generally distributed over the country. A combined working force of 25,221 persons were employed by the 314 firms making returns, as compared with 24,976 on March 1. The trend of employment on April 1 of last year was downward, and the situation then was less favourable than at the present time.

Pulp and Paper Products.—Pulp and paper mills recorded improvement, as did also plants producing paper goods and, to a less extent, printing and publishing works. The gain took

place largely in Quebec. Reports were tabulated from 466 manufacturers, employing 50,379 persons, as compared with 49,832 in the preceding month. Although there was a considerable decline in personnel at the beginning of the same month in 1924, the index number then stood very slightly higher.

Rubber Products.—Firms, largely in Ontario and Quebec, reported additions to staffs in this division. The gain exceeded that noted on the same date of last year, when employment was in less volume. The payrolls of the 31 concerns making returns on April 1, 1925, aggregated 11,703 persons, or 389 more than in the month before.

Textile Products.—Continued expansion was reported in the textile industries; cotton, woollen, knitting, garment, personal furnishing and cordage factories recorded larger working forces, while there was a decline in headwear manufacturing. All provinces shared to some extent in the upward movement, but the gains in Ontario were most extensive. Statements were tabulated from 537 firms employing 69,900 persons as compared with 68,140 in the preceding month. On April 1, 1924, there was a minor increase and the index number now is higher than on that date.

Tobacco, Distilled and Malt Liquors.—Tobacco factories in Quebec and Ontario were less fully employed than in the preceding month. This decrease is somewhat larger than that reported on April 1 of last year. A combined working force of 10,557 persons was registered by the 107 firms making returns, who had 12,213 persons in their employ on March 1.

Clay, Glass and Stone Products.—Brick and stonecutting establishments were busier, reflecting seasonal activity in building. Quebec and Ontario reported the bulk of the gain of 674 persons in the staffs of the 110 firms reporting in the Dominion. They employed 7,452 workers.

Electrical Apparatus.—The trend of employment in this industry continued to be downward; the situation was, however, slightly better than at the beginning of April, 1924. The largest declines on the date under review were in Ontario. Statements were received from 33 manufacturers, having 8,855 employees as compared with 9,065 on March 1.

Iron and Steel.—There was further pronounced improvement in iron and steel, in which all except the Prairie Provinces shared. The most extensive increases took place in Ontario. Rolling mills, automobile, railway car, agricultural implement, heating appli-

ance, general plant machinery, shipbuilding and sheet metal works, foundries and machine shops registered a large part of the expansion. The payrolls of the 641 firms making returns rose from 109,253 persons in the preceding month to 114,984 at the beginning of April. These additions greatly exceeded those reported on April 1 of last year, but the index number then was above its present level.

Non-Ferrous Metal Products.—Moderate increases were indicated in lead, tin, zinc and copper plants, chiefly in Ontario. Employment on the same date in 1924 had shown an unfavourable trend, although at that time it was in greater volume. A combined working force of 10,683 persons was recorded by the 102 employers making returns, who had 10,571 workers on March 1.

Mineral Products.—Gas and petroleum plants in Ontario registered heightened activity. Returns were received from 73 manufacturers, employing 9,168 persons or 132 more than in the preceding month. The additions to staff recorded at the beginning of April of last year were very much smaller and the situation then was somewhat less favourable.

Logging

Logging camps showed very marked seasonal losses, 13,605 men being released from the staffs of the 226 firms making returns, who employed 18,885 workers on April 1. All provinces shared in the downward movement; the reductions in Ontario were, however, much the largest. The number of workers let out on the same date in 1924 was somewhat greater, but the index number then stood some points higher.

Mining

Coal.—Very little change on the whole was shown in the employment afforded in coal mining, increases in British Columbia nearly offsetting reductions in the Prairie Provinces. A strike in the Maritime coal fields continued to affect employment very considerably. The working forces of the 205 operators throughout Canada making returns aggregated 25,060 employees, as compared with 25,126 employees on March 1. Employment on April 1 of last year was above its present level.

Non-Metallic Minerals (Other than Coal).—There was general improvement in this division, the greatest expansion taking place in Quebec and Ontario. Asbestos mining in the former province and quarrying generally were more active. A combined working force of 4,955 persons was employed by the 67 firms

Table III.—Index Numbers of Employment by Industries. (January, 1920 = 100)

Industry	Relative Weight*	Apr. 1, 1925	Mar. 1, 1925	Apr. 1, 1924	Apr. 1, 1923	Apr. 1, 1922	Apr. 1, 1921

*The term "relative weight" is explained in the accompanying text.

making returns, who had 4,458 employees in the preceding month. This increase is much larger than that recorded on April 1, 1924, but the index number then was higher than at the present time.

Communication

Telegraphs and telephones recorded more employment, according to 166 firms with a working force of 22,197 persons. In their last report they had 21,912 workers. Telephones in Ontario registered the larger share of the improvement, which exceeded that indicated at the beginning of April of a year ago.

Transportation

Steam Railway Operation.—The payrolls of the 102 concerns and divisional superintendents making returns aggregated 70,959 persons, or 480 less than on March 1. Quebec suffered most of this loss. Employment on April 1, 1924, had shown a very much greater reduction, but the index number then was above its present level.

Shipping and Stevedoring.—Water transportation in the Maritime Provinces, Quebec and Ontario reported increased activity, 1,227 persons being added to the staffs of the 49 employers making returns, who had 10,431 workers on April 1. This expansion is somewhat less pronounced than that indicated on the same date of last year, when the index number was higher.

Construction and Maintenance

Building Construction.—Seasonal operations in building construction caused a 9 per cent

increase over March in this group; 301 building contractors increased their working forces from 17,230 persons in the preceding month to 18,787 persons on April 1. Quebec and Ontario registered a large share of the gain, which was much more extensive than that recorded on the same date of a year ago. Employment then was on a considerably lower level.

Highway Construction.—Work on public highways in British Columbia showed a fairly large decline and although there were increases in the Maritime Provinces, the balance of employment was unfavourable. Statements were received from 68 employers, having 5,353 workers or 195 less than at the beginning of March. There were considerable increases in personnel on April 1, 1924, when employment was in smaller volume.

Railway Construction.—Further reductions in staff were indicated by the construction departments of the railways, but the losses were very much smaller than on April 1 of a year ago; the index number then, however, stood higher. An aggregate working force of 25,209 persons was reported by the 30 employers making returns, who had 25,972 employees on March 1. The Maritime Provinces, Quebec and Ontario registered the declines, while in the four Western Provinces increased activity was noted.

Services

This group showed general gains; 207 persons were added to the staffs of the 175 firms reporting, who employed 13,369 workers at the beginning of April. Laundries indicated most of the improvement, but there were also gains in other branches. Employment on the same date of last year had also increased.

Trade

Retail stores, particularly in Quebec and Ontario, afforded more employment, while very little general change was indicated by wholesalers. A combined pay-roll of 56,041 persons was employed by the 598 firms from whom statistics were received. They had 55,328 employees on March 1. Contractions were shown at the beginning of April, 1924, and the index number then was lower.

The accompanying table gives index numbers of employment by industries as at the first of April and March, 1925, as compared with April 1, 1924, 1923, 1922 and 1921. The column headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated district or industry bears to the total number of employees reported in Canada by the firms making returns on April 1, 1925.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING MARCH 31, 1925, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of local trade unions deals with the situation reported during the quarter ending March 31, 1925. At the close of January 10.2 per cent of the members reported were out of work as compared with 11.6 per cent at the end of December. The situation continued to improve during the following two months, and at the end of March 8.5 per cent of the members were reported out of work. More unemployment was indicated each month throughout the quarter than in the corresponding months of last year, and the percentage out of work at the end of March this year was nearly two points higher than on March 31, 1924.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18-19-20, and by months for 1921-22-23-24 and to March of this year. The trend of the curve which had been upward since the end of September last year to the end of December changed its course in January and has since been constantly projecting downward indicating improvement each month.

In January New Brunswick, Quebec and British Columbia unions showed a better situation than in December, the gain in Quebec being most marked, due to greater employment in the garment trade. Workers in the manufacturing division were considerably better employed, and lumber and transportation workers also reported gains. The building trades, however, were somewhat slacker.

During February the situation in Nova Scotia, New Brunswick, Quebec and Manitoba was more favourable than in January; the percentage out of work in Ontario remained unchanged and employment in the other provinces declined. Employment in the manufacturing industries was on a higher lever than in January, for the most part due to increased

work in the garment trades, though paper-makers, textile, iron and steel and glass workers also contributed to the gain. The building trades showed slight expansion, but in the transportation division there was less activity.

In March, Nova Scotia, New Brunswick, Ontario, Manitoba, and British Columbia unions were busier than in the previous month and the reductions in the remaining provinces were slight. A small adverse change was indicated in the manufacturing division. The building trades showed a revival from the yearly period of depression and transportation

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month		N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

workers also registered a slight change for the better.

Table I summarizes the returns by provinces by months from January, 1921, and Table III shows the percentages of unemployment reported in the different groups of industries, also by months from January, 1921.

Employment in the manufacturing division declined considerably during January as compared with January of last year. Garment workers reported about 18 per cent more idle-

ployed and the situation for building tradesmen also was more favourable. Lumber workers reported much slackness, and employment for transportation workers was on a slightly lower level.

In March more unemployment than in the same month of last year was reported in the manufacturing division, principally due to less work in the garment, iron and steel and glass divisions. The building trades employed larger working forces, and transportation

ness, and textile and glass workers also were considerably less active. Slight reductions were registered by building tradesmen, transportation workers and coal miners. Fishermen were much busier and retail shop clerks also were more fully engaged.

Workers in the manufacturing division reported nearly 3 per cent more unemployment during February than in the same month of last year, due mostly to reductions in the textile trades and among iron and steel workers. Fishermen were considerably better em-

ployed and the situation for building tradesmen also was more favourable. Lumber workers reported a large percentage of unemployment.

The accompanying tabulation, Table II, shows the percentages of unemployment for the months of January, February and March for all Canada, and also by provinces for the month of March. For this month reports were received from 1,550 locals with a combined membership of 154,558 persons, of whom 13,159 or a percentage of 8.5 were unemployed.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD JANUARY TO MARCH, 1925

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the period January to March, 1925, were less favourable than in either the previous quarter or the corresponding quarter of last year. In the latter comparison there was a decrease of nearly 29 per cent in the number of opportunities for employment, and of about 28 per cent in the

decline in the number of orders for water transportation workers.

When comparing the first three months of this year with the last quarter of the year 1924, it is noted that the number of applications for employment was 13 per cent lower, vacancies 18 per cent, and placements 18 per cent lower than last year. Regular placements decreased 30 per cent, but casual placements

number of placements. Most of the declines, however, were due to a reduction in the number of orders for casual workers. Applications for employment were about 14 per cent less during the quarter under review than during the corresponding quarter of last year. All industries shared in the reduction of positions offered except trade where there was an increase of 11 per cent in the quarter under review over the corresponding quarter of 1924. The reductions were most pronounced in logging, construction and transportation. A decline of 36 per cent in the number of orders for highway construction workers was responsible for the reduction in the construction group, and orders for longshoremen, many of which had been placed through the Vancouver office during the winter of 1923-24, were not placed with the Service during the past winter, with the result that there was a

were 10 per cent higher. The declines were chiefly attributable to seasonal inactivity in farming and building construction and to reduced orders for bush workers.

It will be noted from the chart which appears on this page that the ratio of vacancies and placements to applicants was less during the period under review than during the corresponding quarter of last year. During the period January to March of this year there were on an average 64 vacancies and 59 placements for each 100 applicants, as compared with an average of 77 vacancies and 70 placements for each 100 applicants during the same months of 1924. Some promise of improvement may be deduced from the trend of the curve representing the ratio of vacancies to applicants which was generally upward since last November, that month being the low level of vacancies to applicants for the

past two years. The average number of applicants registered daily throughout the period under review was 1,469, and the daily average of positions offered 942, in contrast with daily averages of 1,681 applications and 1,308 vacancies during the corresponding quarter of 1924.

During the three months January to March, 1925, the offices of the Service reported that they had made 69,814 references to positions, and had effected a total of 66,025 placements, of which 39,143 were in regular employment and 26,882 in casual work. Of the placements

in regular employment 31,120 were of men and 8,023 of women, while casual work was found for 18,083 men and 8,799 women. A comparison with the same period of 1924 shows that 91,338 placements were made, of which 42,874 were in regular employment and 48,464

in casual work. Applications for employment during the period under review were received from 85,397 men and 26,227 women, a total of 111,624, in contrast with a registration of 129,425 during the same period of 1924. Employers notified the Service during the first

quarter of the current year of 71,557 positions, of which 51,530 were for men and 20,027 for women, as compared with 100,691 opportunities for work offered during the same period of 1924.

The accompanying table gives the vacancies and placements by industrial groups of the

offices of the Employment Service of Canada in the various provinces during the period January to March, 1925. In another section of the issue will be found a report in detail of the transactions of the employment offices for the month of March.

EMPLOYMENT OFFICE REPORTS FOR MARCH 1925

THE business of the offices of the Employment Service of Canada in the month of March was greater in volume than during the preceding month, the increase being general throughout the various provinces, while a comparison with the corresponding month of the preceding year shows a slight reduction in the placements effected. The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements declined slightly in relation to applications during the first half of March, but reached a higher level at the close of the month than that attained during the preceding month. A lower level of employment, however, is represented during this year than in the same period in 1924. The ratio of vacancies to each 100 applications was 61.6 and 66.8 during the first and second half of March, 1925, in contrast with the ratio of 71.1 and 78.1 during the same periods in 1924. The ratio of placements to each 100 applications during the periods under review was 56.4 and 59.6 as compared with 64.4 and 64.6 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications reported daily during the first half of March was 1,413 as compared with 1,230 daily during the preceding period, and with 1,273 daily during the corresponding period of 1924. Applications for work during the last half of the month registered 1,506 daily, in contrast with 1,411 daily during the latter half of March a year ago. Employers notified the Service of an average of 870 vacancies during the first half, and 1,006 opportunities daily during the latter half of the month under review, as compared with a daily average of 906 and 1,102 vacancies during the month of March, 1924. Vacancies offered to the Service during the latter half of February, 1925, averaged 784 daily. The Service effected an

average of 798 placements daily during the first half of March, of which 473 were in regular employment and 325 in work of one week's duration or less, as compared with a total average placement during the preceding period of 725 daily and with 820 daily during the first half of March, 1924. During the latter half of the month under review placements averaged 898 daily (585 regular and 313 casual) as compared with an average of 912 daily during the corresponding period a year ago.

During March, 1925, the offices of the Service referred 23,420 persons to vacancies and effected a total of 22,130 placements. Of these the placements in regular employment numbered 13,862, of which 10,817 were of men and 3,045 of women, while placements in casual work totalled 8,268. Opportunities for employment reported by employers numbered 16,766 for men and 7,744 for women, a total of 24,510. The number of applications for work was 38,028, of which 28,690 were from men and 9,338 from women.

The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (3 months).....	39,143	26,882	66,025

MARITIME PROVINCES

Opportunities for employment declined slightly during March when compared with the preceding month, and were also less than during the corresponding month of last year. The placements effected in Nova Scotia were 19 per cent less than in March, 1924, and in New Brunswick a decrease of about 11 per cent was recorded. Conditions in the construction group remained quiet, and although placements were higher than in February the work was confined to repair jobs which were only temporary; 126 placements were effected

in this group. Logging, with 60 placements in Nova Scotia and 53 placements in New Brunswick, showed a slackened demand from February. Farming remained inactive. In the manufacturing industries opportunities for employment were almost entirely confined to iron and steel products and lumber products, the latter with 49 placements showing an improvement over February. In the services group where the bulk of opportunities for employment occurred, Nova Scotia offices made 213 placements and New Brunswick offices 352 placements. About 70 per cent, however, were in casual employment. During March the total placements in regular employment in Nova Scotia were 155 men and 57 women, and in New Brunswick 117 men and 102 women.

QUEBEC

There was an increase of over 30 per cent in the number of vacancies listed during March over the preceding month and nearly 13 per cent more than in March, 1924. Placements were slightly higher than last year, and 25 per cent greater than in February. Shortage in female household workers was mainly responsible for the surplus of vacancies over placements. There were 175 placements effected in the construction group, almost equally divided between building and highway. Very little activity was shown in farming. Logging, with 121 placements, was quiet prior to the opening up of river driving. More workers were placed in the manufacturing industries than in February, and all orders were promptly filled. More than 50 per cent of the placements for the province were in the services group, the majority being in household service.

ONTARIO

During March opportunities for employment increased nearly 10 per cent over February, and between 12 and 13 per cent over the corresponding month of last year. Placements were 8 per cent higher than in February and 21 per cent in excess of March, 1924. There was an increased demand for farm hands, placements more than doubling the number effected during February. In logging the interseasonal lull was in evidence, placements falling to a little more than half the February total. River drivers were not yet in demand. The manufacturing industries showed more activity generally, placements for the month numbering 1,293 or about 30 per cent more than in February. Over 40 per cent of the placements were in the iron and steel industries. Building had not yet opened up, there being few opportunities other than repair

work. Placements on highway construction, including road clearing and sewer work, numbered 3,066, more than 50 per cent of which being in employment of less than one week's duration. There was an increase in the number of orders in the service group over February, particularly in the women's sections where the demand for cooks and cooks-general was in excess of the supply. The total regular placements in Ontario during the month numbered 4,794 of men and 946 of women.

MANITOBA

Orders received during March showed an increase of more than 55 per cent over February, but were slightly lower than in March, 1924. Farm orders were mainly responsible for this increase, under which 1,187 jobs were listed in comparison with 545 for February. Building trades were slack with a large surplus of applicants. Few bush orders were received and were principally replacements. There was a large increase in orders under services, but over 70 per cent of the placements in this group were in casual employment. Placements in regular employment during the month totalled 1,042 of men and 425 of women. During March of last year 1,900 placements were effected.

SASKATCHEWAN

During March 2,824 orders were received by Saskatchewan offices, in comparison with 1,592 in February and 2,887 during March, 1924. Placements were over 60 per cent higher than in February, and about 4 per cent higher than during March of last year. There was a large demand for farm workers, which was not fully met. Farm orders totalled 1,687 during the month, and placements 1,301. The volume of business transacted in other industrial groups was not large, except for services, where 745 placements were effected. Nearly 50 per cent of these were in household service. Total placements for the month in regular employment numbered 1,437 of men and 401 of women.

ALBERTA

Opportunities for employment showed an increase over the preceding month, vacancies for February and March being 1,710 and 2,325 respectively. Placements for March numbered 2,169, an excess of more than 30 per cent over February. All industrial divisions participated in this increase except logging, mining and transportation. Farm placements numbered 962 in contrast with 481 in February. The demand was brisk with plenty of applicants available. Six hundred and fifty-six place-

ments were effected in the services group, the majority being household workers. There were 147 placements in manufacturing industries, 217 in logging and 108 in construction. Of the latter, 83 were in building construction where there was little activity as yet, the work being almost entirely confined to repair jobs. During March the total placements in regular employment were 1,403 of men and 394 of women.

BRITISH COLUMBIA

Vacancies listed at offices in British Columbia during the month of March were about 6 per cent higher than in February, but nearly 40 per cent less than during March, 1924. Last year's surplus was, however, almost entirely made up of casual jobs in the city of Vancouver. Placements in regular employment were about 7 per cent lower than during the corresponding month of last year. Placements in manufacturing industries were twice as large as in February, activity in lumber mills being mainly responsible for the increase. An improvement was noticed in building construction, with 367 placements as against 113 in February. Placements on road work decreased as much of the civic relief work was being closed down. Placements in logging numbered 302, and in farm work 241, the latter being an increase over February. There were 969 placements in the services group, but 671 of these jobs were casual. The demand for household workers continued. The number of men placed in regular employment was 1,431 and of women 242.

Movement of Labour

During March, 1925, the offices of the Employment Service of Canada made 13,862 placements in regular employment of which 7,522 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 1,116 were granted the Employment Service reduced transportation rate, 831 going to points within the same province as the dispatching office and 285 to other provinces.

The Quebec offices granted 8 transportation certificates, all of which were for bushmen, 3 travelling from Montreal to Sault Ste. Marie and 5 from Quebec City to points within the territory covered by that office. Ontario offices issued 199 certificates, 198 being for workers travelling to employment at points within the province, and one, a farm hand, sent from Toronto to employment near Brandon. Of the 198 provincial transfers 166 were of bush workers for whom Port Arthur

issued 75 certificates, Fort William 74 certificates and Sudbury 2 certificates to points within their own zones and Pembroke 15 certificates to points within the territory of North Bay. Toronto sent 5 carpenters, one blacksmith, one foreman rigger, one concrete foreman, one cook and one timekeeper to Port Arthur, one millwright to North Bay, one timekeeper to Sudbury, one farm hand to Chatham and one cook and one gardener to Ottawa. Port Arthur issued certificates to three machinists going to employment within the Port Arthur zone. Sault Ste. Marie sent a marine engineer to Timmins and Sudbury sent 13 farm hands to Guelph, Kitchener and Peterborough. In Manitoba 461 certificates were issued, all from the offices at Winnipeg, 282 being to points within the province and 179 to other provinces. The latter included 81 certificates for Port Arthur, 75 for bush workers, 2 for cooks, 2 for stationary engineers and one each for a saw mill labourer and a kitchen help in a hotel. Ninety-eight certificates were issued to points in Saskatchewan, 95 for farm hands distributed throughout the province, for the most part through the offices at Regina and Estevan and 3 farm domestics to the vicinity of Regina. Of the certificates issued to persons going to work within the province, 251 were for farm hands, 211 of whom were placed through the Brandon office. The balance of the provincial certificates numbering 31, were for female hotel and household workers and farm domestics. The offices in Saskatchewan issued 99 certificates, all to points within that province. Moose Jaw sent 9 farm hands and a cook to employment within the Moose Jaw zone. Prince Albert sent 1 sawmill labourer and 1 edgerman to points within their own zone, a farm hand to both Weyburn and Estevan, and a carpenter to Regina. Regina granted certificates to 8 farm hands, 2 cooks, 1 hotel porter and 1 teacher, all going to employment at points within the Regina zone. Seven farm hands and 4 household workers were also despatched by this office for placement through Moose Jaw, and 1 farm hand through Saskatoon. Saskatoon issued 56 certificates to farm hands, 3 to female household workers and 1 to a hotel porter, all except 8 of whom were destined for points within the Saskatoon zone and the balance through the offices at Moose Jaw, Prince Albert, Swift Current, Estevan and North Battleford. Alberta offices granted 191 certificates, 163 provincial and 28 inter-provincial. The latter were to farm hands sent by Edmonton, 25 to Saskatoon and 3 to North Battleford. Of the provincial certificates, Leth-

bridge granted 3 to plasterers for whom employment had been secured through the Calgary office. Edmonton issued 132 certificates, 4 to farm hands for the Drumheller district, 1 for Calgary, and 40 for points within the Edmonton zone. The balance of the certi-

*101 placements effected by offices since closed.

cates issued by Edmonton were to workers destined for points within that zone, the occupations of the workers transported including 59 bushmen, 13 bridge carpenters, 1 miner, 1 mining mechanic, 1 blacksmith, and 12 bush and construction camp workers of various occupations. Calgary sent 12 farm hands to Drumheller, 7 to Edmonton and 1 to Lethbridge, also 5 hotel and household workers to employment through these offices, and 3 loggers to points within the Calgary zone. The British Columbia offices issued 155 certificates, 84 for points within the province and 74 to points in other provinces. The latter were made up of 8 farm hands and 1 domestic from Victoria, 44 farm hands and 2 domestics from Vancouver, 1 farm hand from Cranbrook, and 15 farm hands, 2 cooks and 1 blacksmith from New Westminster, their destinations by provinces being: Alberta, 22 farm hands and 1 domestic; Saskatchewan, 43 farm hands, 2

domestics, 2 cooks and 1 blacksmith; and Manitoba, 3 farm hands. The provincial movement included 1 miner sent from Nelson to Penticton, 1 farm hand from Nelson to a point within that zone, 2 teamsters, 1 swamper and 1 tallyman from Prince George to Prince Rupert, and from Vancouver 7 farm hands and 1 cook to Kamloops, 46 bush workers to Revelstoke, 1 mucker, 4 well drillers, 1 engineer, 1 sawyer, and 2 sawmill labourers to Penticton, 1 engineer, 1 cook and 1 sawmill labourer to Prince George, 1 engineer to Nelson, and 3 miners, 1 blacksmith, 3 cooks, 2 auto mechanics and 2 drillmen to points within the Vancouver zone.

Of the 1,116 workers who benefited by the Employment Service reduced transportation rate, 530 were carried by the Canadian National Railways, 578 by the Canadian Pacific Railway, and 8 by the Pacific Great Eastern Railway.

Losses from Industrial Accidents in Canada

Mr. H. Jaquays, President of the Montreal section of the Canadian Manufacturers' Association, at a recent meeting of the Quebec Safety League, in connection with the recent "Safety Week," estimated that the economic loss by accidents of different kinds totalled yearly nearly \$50,000,000. He stated that the "Safety First" movement began in industry only after employers had been made responsible for the accidents caused their employees. No accident statistics had been kept before employers were obliged to pay compensation in cases of accident. He also stated that accidents, especially within the last few years, meant an enormous expenditure by employers, amounting to about 1½ per cent of the ordinary cost of production which, in turn, contributed to the increase in the price of products manufactured. The total salaries paid by manufacturers during the year was about \$700,000,000, which meant that accidents cost about \$10,000,000, and as only 20 per cent of the total number of workers are employed in factories, it followed that about \$50,000,000 is being paid every year for accidents. If the number of accidents could be reduced by one-half, a saving of more than \$25,000,000 would be effected every year. He further claimed that a very large number of accidents were not the result of defective machinery, but were rather due to the carelessness of workers, and suggested that there were two remedies which might be applied: 1, to operate only machines which are absolutely acci-

dent proof; 2, to train workers to carefulness, as workers need to be continually reminded of the need of caution.

Rates of Pay for British School Teachers

New rates of pay for teachers in British public elementary schools, and in secondary schools in which the local education authorities accept responsibility for the salary scale, took effect on April 1, 1925. The rates for men are as follows:—

Certificated teachers: Scale I, £168 to £312; scale II, £168 to £330; scale III, £180 to £366, and scale IV, £192 to £408.

Uncertificated teachers: Scales I and II, £102 to £198; scale III, £108 to £222, and scale IV, £117 to £246.

The rates for women are as follows:—

Certificated teachers: Scale I, £150 to £246; scale II, £150 to £258; scale III, £162 to £288, and scale IV, £180 to £324.

Uncertificated teachers: Scales I and II, £93 to £156; scale III, £99 to £174, and scale IV, £108 to £198.

The revised scales of pay are to remain in operation for six years, and thereafter be subject to notice of one year from either panel of the Standing Joint Committees. No teacher is to receive a lower rate, as from 1st April, 1925, than he or she was receiving at the end of March, provided that no teacher is to receive a scale salary in excess of the maximum of the appropriate scale.

BUILDING PERMITS ISSUED IN MARCH, 1925

THERE was a substantial increase in the value of the building permits issued in March as compared with February, but the total was lower than in March of last year. The Dominion Bureau of Statistics tabulated reports from 60 cities which issued in March, 1925, permits aggregating \$8,457,791, as compared with \$5,781,642 in the preceding month and with \$9,365,070 in March, 1924. The increase in the first comparison was \$2,676,149, or 46.3 per cent, while the decrease in the second comparison was \$907,279, or 9.7 per cent.

Detailed statements were furnished by some 50 cities, showing that they had issued over 1,100 permits for dwellings valued at nearly \$5,200,000 and about 1,900 permits for other buildings at an estimated cost of approximately \$2,900,000.

Ontario, Manitoba, Alberta and British Columbia registered increases in the value of building authorized as compared with February. The largest actual gain of \$2,325,148 or 118.2 per cent was in Ontario, but Manitoba showed the greatest proportional advance of \$573,305 or 371.4 per cent. Of the reductions in the other provinces, those of \$774,443 or 33.5 per cent in Quebec and of \$28,005 or 78.7 per cent in New Brunswick were most pronounced.

As compared with March, 1924, all provinces except Manitoba recorded declines in the permits issued; in that province there was an increase of \$483,531 or 313.2 per cent. Quebec showed the largest actual loss in this comparison of \$927,494 or 37.6 per cent, while New Brunswick registered the greatest proportional decrease of \$23,655 or 75.8 per cent.

In Montreal, the value of the building authorized was lower than in either February, 1925, or March, 1924; Toronto and Vancouver showed increases in the first and declines in the second comparison, while in Winnipeg there were gains in both comparisons. Sydney, Three Rivers, Belleville, Brantford, Hamilton, Kitchener, London, Niagara Falls, Ottawa, Owen Sound, Peterborough, Stratford, St. Thomas, Sarnia, York Township, Windsor, St. Boniface, Edmonton, Lethbridge, Nanaimo, Point Grey, South Vancouver and Victoria issued permits at a higher valuation than in the preceding month and also than in the corresponding month of last year.

Accumulative Record for First Quarter of 1925.—The value of the building authorized in 60 cities during the first quarter of 1925 was higher by 10.2 per cent and 1.2 per cent than in the first three months of 1924 and 1923, re-

spectively. It was also 5.5 per cent greater than in the first quarter of 1922, 46.5 per cent

NOTE.—York Township is practically a suburb of Toronto, while the four Border Cities—Ford, Riverside, Sandwich and Walkerville—bear very much the same relation to Windsor.

higher than in 1921 and 4.3 per cent above the 1920 total. The aggregate for this year is \$19,672,637; for 1924, \$17,846,969; for 1923, \$19,441,159; for 1922, \$18,643,948; for 1921, \$13,426,227, and for 1920, \$18,866,351. The weighted index number of wholesale prices of building materials compiled by the Dominion Bureau of Statistics averaged 153.8 during the

first quarter of 1925, as compared with 167.3 in the same three months of 1924, 164.9 in 1923, 161.1 in 1922, 207.8 in 1921 and 208.1 in 1920.

The accompanying table shows the value of the building permits issued in 60 cities during March and February, 1925, and March, 1924. The 35 cities for which records are available since 1910 are marked thus "*".

NEW WAGE AGREEMENTS IN THE CROW'S NEST PASS COAL FIELDS IN WESTERN CANADA

REFERENCE was made in the November, 1924, issue of the *LABOUR GAZETTE* to an agreement which was made between the Western Canada Coal Operators' Association, and certain independent operators on one side, and District 18 of the United Mine Workers of America on the other side. This agreement resulted in the settlement of a strike which had been in existence since the month of April, 1924, in most of the coal mines of Southern Alberta and South Eastern British Columbia. This settlement provided for the abolition of the \$1.17 per day bonus for contract miners and for a reduction in day wages of 12½ per cent, which was estimated to average about 90 cents per day. The day rate for hand miners fell from \$7.50 per day to \$6.56, and the rate for surface labourers from \$6.58 to \$5.76.

Following the foregoing settlement the mines in the district were reopened, but in some instances the steam coal mine operators reported that they could not get contracts for coal in competition with coal from the United States at low prices and that it was impossible to operate the mines at a loss. Some of the mines were, therefore, closed down indefinitely. As a result of the ensuing negotiations some of the operating companies withdrew from the Western Canada Coal Operators' Association and entered into separate agreements with their employees, providing for lower wage scales than that in the district union agreement.

Miners on the British Columbia side of the interprovincial boundary line organized as the British Columbia Miners' Association and entered into agreements with the Crow's Nest Pass Coal Company, Limited, Fernie, B.C., operating coal mines at Coal Creek and Michel, B.C., and coke ovens at Fernie and Michel. The first agreement was signed on behalf of the miners at Coal Creek on December 18, 1924, by the members of a committee and endorsed by the officers of the new organization to be in effect from December 21, 1924 to March 31, 1928. A similar agreement cover-

ing the employees at the Michel mine and the coke ovens was signed on January 23, 1925, by a committee representing the employees, to be in effect from January 22, 1925 to March 31, 1928. The terms of these agreements and the wage scales are as follows:—

AGREEMENT ENTERED INTO BETWEEN THE BRITISH COLUMBIA MINERS' ASSOCIATION AND THE CROW'S NEST PASS COAL COMPANY, LIMITED, OF FERNIE, B.C.

It is mutually understood and agreed that the following conditions and rates shall govern the parties hereto for a period ending March 31, 1928, and the parties hereto will meet in conference ninety (90) days prior to the expiration of this agreement to discuss a renewal thereof.

(1) *Definition.*—The word "Association" when hereinafter used, shall refer to the British Columbia Miners' Association. The word "company" shall refer to the Crow's Nest Pass Coal Company, Limited.

It is understood and agreed that all the employees of the company shall be eligible to join the association, with the exception of those hereinafter specified as not being within the jurisdiction of the association, and that from among such members who also are employees in good standing of the company, there shall be selected by the association the proper officers, executive and committee, to meet and deal with the company on matters arising under this agreement, and that the decision of such executive or committee arrived at with the company shall be final and binding upon the employees, and shall become part of the agreement from the date hereof until the termination of the agreement. The checkweighman shall be selected from employees in good standing.

(2) *Management of Mines.*—The question of managements of the mines, the employment of men, and the direction of the working forces, shall be solely within the jurisdiction of the company.

(3) *Employees' Committee.*—The employees' committee shall be a committee selected by the employees from men who are actually employed at ——— Colliery, and due notice of such selection shall be given to the company.

The employees' committee, in discharge of its duty, shall under no circumstances, go around the mine for any cause whatever, unless called upon, or given necessary permission by the management.

The employees' committee shall meet the management once each month at a time to be mutually agreed upon, for the purpose of discussing conditions in connection with the work and welfare of the employees.

Special meeting may be arranged at any time at the request of either party.

(4) *Settlement of Disputes.*—(a) In case any disputes or grievances arise under this agreement, the parties shall endeavor to settle the matter as hereinafter pro-

vided. But before any grievance or disputes shall be submitted to the employees' committee, the person or persons affected, shall endeavor, by personal application to the mine manager, overman, or foreman in charge of the work where the dispute arises, to settle the matter, and in the event of them agreeing, their decision shall be final.

(b) In case of failure to agree between the mine manager, overman or foreman in charge of the work where the dispute arises and any employee, the employees' committee and management shall endeavor to settle the matter and their decision shall be final.

(c) The employees' committee shall consist of:

- 1 Representative of each mine.
- 1 Representative from the surface, and

The president and secretary of the association.

The above shall be the full committee for monthly meetings, and questions affecting the whole camp. Should a question arise affecting any one mine, the committee endeavouring to settle the matter shall consist of the representative of the mine, together with the president and secretary of the association.

(5) *Deductions*.—The company agrees to make deductions from employees, not to exceed the amounts set out below, to defray expenses of committee for such amounts as they have definite orders for, from the individuals:

Maximum deductions from men—50 cents per month.

Maximum deductions from boys—25 cents per month.

The company agrees that in case of death by sickness, of a member of the B.C. Miners' Association, they will make an extra deduction of a similar amount to cover funeral expenses.

FORM OF ORDER

—192

To the Crow's Nest Pass Coal Co., Ltd.,
Fernie, B.C.

I authorize and empower you to deduct and pay to the B.C. Miners' Association, monthly, from my earnings, the following, or such lesser amount as may be designated by the secretary.

Where it is necessary to pay funeral expenses of a member: \$1 per month.

Where it is unnecessary to pay funeral expenses of a member: 50 cents per month.

(In case of a boy, change amounts to 50 cents and 25 cents respectively.)

Signed _____

Witness _____

(6) *Employees Not Under Jurisdiction*.—All employees connected with the management of the mines, including the following: mine manager, or superintendent, overman, or assistant overman, pit bosses, fire bosses, boss driver, stoker boss, master mechanic, electricians, weighman, head carpenter, head blacksmith, tippie foreman, loader boss, night watchman, outside foreman, and all other foremen, timekeepers, coal inspector, and head lampmen.

(7) *Penalty for Absence from and Stoppage of Work*.—When any employee absents himself from work for a period of two days, unless through sickness, or by first having properly arranged with overman or foreman, and obtained his consent, he may be discharged.

All employees whose absence would cause any stoppage of work, must, before absentsing themselves, properly arrange or notify the overman or foreman, for or of their absence. Any employee who habitually absents himself from work may be discharged.

Any employee, or employees, who shall cause a stoppage of work in violation of this agreement, shall be subject to discharge by the company without recourse.

(8) *Penalties for Loading Impurities*.—The miners are to deliver their coal as free from rock and other im-

purities as is practicable, and in case of a miner failing to do so, he shall be warned for the first offence, and for continued or aggravated cases, may be discharged. In case of any miner being penalized for loading dirty coal, the responsibility for loading dirty coal shall apply equally to each partner who participates in loading the dirty coal.

(9) *Dockage*.—The dirty or slate or other impurities picked from the coal going over the picking tables or screens shall be weighed for a period of twelve working days. From this method of weighing the average weight of waste in each mine car will be determined and form a basis of deductions per car in favour of the Company; or, in other words, presuming that the average dirt taken from each car equals 17 pounds, then the Company will have the right to deduct from the weight of each pit car 12 pounds to compensate them for hauling and handling of waste. If the average of waste does not exceed 5 pounds per car, there will be no deductions for waste, the 5 pounds per car being considered reasonable allowance for slate or waste that the miner or loader cannot consistently pick out from the various kinds of coal.

If the average weight of dirt in each car exceeds 17 pounds or runs below 17 pounds, the difference between the actual average weight of dirt in each car and the 5 pounds per car allowance shall form the basis of allowance for waste.

It is further understood that this system of weighing the average dirt sent out in each car may be checked at either the request of the miners or the Company at any time during the life of this Agreement.

Further, should the dirty coal or slate sent out by the miners exceed the allowance above specified, the following system of fines to prevail:—

First offence: 50 pounds of rock or slate, warning and fine of 100 pounds of coal. After the first offence, 65 pounds rock or slate shall be fined 200 pounds of coal; 85 pounds of rock or slate shall be fined 400 pounds of coal; and 150 pounds of rock or slate shall be fined all the coal in the car and liable to discharge.

The weighman shall give the first warning and keep record of offences, and report them daily to the Mine Manager.

The money coming from this special list of fines (after deducting the actual weight of rock) shall be applied to providing prizes for miners' sports or to the entertaining of miners' children.

(10) *Suspension of Mining*.—(a) In case of suspension of mining, either at the expiration of this Agreement or otherwise, the Engineers, Firemen and Pumpmen shall not suspend work, but shall, when mining is suspended, fully protect all of the Company's property under their care, and operate fans and pumps, lower and hoist such men and supplies as may be required to protect the Company's property, and any and all coal required to keep up steam at the Company's plant, but it is understood and agreed that the Company will not ask them to handle any coal for sale on the market.

(b) All men working on construction, improvements and extensive repairs, shall not suspend work, but shall continue to completion of such work, if required by the Company to do so. It is agreed that all men working on improvements and extensive repairs are not included in the jurisdiction of The British Columbia Miners' Association. Construction, improvements and extensive repairs shall include the erection or repairs of tipples, buildings, coke ovens, scales, machinery, railroad tracks, switches, etc.

(11) *New Work*.—When any new system, or radical change in the present system is made in any mine where there is a contract price fixed thereon, the Company or Employees may ask for a price to be fixed on the work as New Work.

In making a price for new work, the Company shall be guided by existing prices in the same mine, and the effect on the earning power of such employees.

(12) *Minimum Rate.*—When a miner's working place becomes a deficient owing to any abnormal conditions preventing him from earning the minimum wage of \$5.20 per shift, the company shall pay him a sufficient amount to secure him the said minimum, provided he has done a fair day's work.

(13) *Miners Taken To Do Company Work.*—The company shall pay the miners' day rate for all miners taken from contract work to do company work.

(14) *Turn of Cars.*—The company shall, as far as practicable, supply each and every miner with all the cars he can load.

(15) *Holidays.*—New Year's Day, Good Friday, Victoria Day, two days including Dominion Day, Labour Day, Armistice Day, two days including Christmas Day—total nine (9) days.

(16) *Funerals.*—In the event of an instantaneous death by accident in the mine or outside the mine, the miners underground and all other employees may suspend work on the day of the accident in the mine where the accident occurred, but shall resume work on the following day, and continue to work until the day of the funeral, when it is optional with them whether they shall work or not.

(17) *Light Work for Aged Men.*—This question is to be mutually arranged for between the mine management and the pit committee.

(18) *Local Conditions:*—

Bull wheels to be moved as provided for in 1920 agreement or every 12 feet.

Snubbing posts to be moved every 12 feet, and paid for at the rate of \$1.95.

In cases where snubbing posts are used by Contract Miners, said miners are to be paid in excess of regular tonnage, 5 cents per ton for manipulating snubbing post ropes, said excess tonnage to apply to the driving of snubbing places from beginning up to 70 feet.

Temporary siding switches in rooms or in levels to be kept up in accord with 1920 agreement.

Dump Cars.—Dump cars to be paid for under this agreement under the two following classifications: When it is possible to work the same on a tonnage basis, the handling of the same shall be paid for at the rate of 7 cents per ton.

When the car is handled in places where it is difficult to keep tonnage record, the same work shall be paid for at the rate of 7 cents per cubic yard.

The wage scale thus adopted was substantially lower than that in the United Mine Workers district agreement, the day rate for miners being \$5.20, as compared with \$6.56 in the district agreement and \$7.50 prior to March 31, 1924, and the rate for surface labourers \$3.75 to \$4, as compared with \$5.76 in the agreement and \$6.53 prior to March 31, 1924. It is to be noted, however, that while the rate for surface labourers is given as \$3.75 to \$4 per day none are receiving less than \$4. The new scale was estimated to be 55 per cent higher than the scale in 1914, and slightly higher than the wage scales in Vancouver Island and in the interior of British Columbia.

Agreements in Alberta Mines

Following this arrangement for the mines in the British Columbia part of the Crow's Nest Pass coal areas, negotiations were entered into between the officials of the Western Canada Coal Operators' Association and the officers of the United Mine Workers on March 17 and

18, to discuss an amendment to the agreement which might provide for a wage scale at which the steam coal mines could be operated in competition with coal from the United States. The Western Canada Coal Operators' Association had already announced that on March 31, notice would be given the union terminating the agreement in force on September 30, as required by the terms of the agreement. (LABOUR GAZETTE, November, 1924, p. 936.) The negotiations for an amendment in the meantime, however, were not successful. Several of the operators then withdrew from the operators' association and entered into separate agreements with committees of their employees providing for lower wage scales. The wages were estimated to be 20 cents to 40 cents per day higher than that in the New Fernie agreement. Some of the mines in Alberta are operated by companies not belonging to the Western Canada Coal Operators' Association, but which had separate agreements with the United Mine Workers similar to the agreement between the union and the operators' association. Some of these mines were also shut down for lack of orders for coal as reported by the operators.

One of these was that at Hillcrest operated by the The Hillcrest Collieries, Limited. Parts of the mine were closed down on February 18, and the remainder on March 20. On March 21, the company addressed a circular letter to its employees stating that orders for coal could not be secured and that it had been suggested that the company post a scale of wages such as that in force at Fernie, and such a scale was posted at the timekeeper's office and men would be signed on at the rates in the scale. The letter referred to statements as to the necessity of keeping existing agreements and stated that in previous years the union officials had availed themselves of opportunities to secure wage increases despite existing agreements. The shutting down of the mine was declared by the union to be a lockout. About April 17, some of the miners went back to work under these terms and the mine was then picketted by the union and provincial police were posted. On April 25, the miners voted to work on a wage scale equal to that in the other steam coal mines in Alberta, as above noted somewhat higher than that in the Fernie neighbourhood. These settlements in the Crow's Nest Pass coal areas affected about 1,500 miners in British Columbia and about 2,000 in Alberta.

Early in May it was reported that certain steam coal mines in Alberta outside of the Crow's Nest Pass coal fields had entered into a similar arrangement.

The day wage scale adopted for the mines in Alberta is shown in the accompanying table:—

FAIR WAGE CONTRACTS, APRIL, 1925

DURING April the Department of Labour received for insertion in the **LABOUR GAZETTE** the following information relative to five fair wage contracts awarded by the Department of Public Works of Canada. All of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of

the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Construction of a dam, Woodward's Slough, Fraser River, British Columbia. Name of contractor, N. E. Broley, Vancouver, British Columbia. Date of contract, March 24, 1925. Amount of contract, unit prices as set forth in contract; approximate expenditure, \$73,796.50.

Construction of two steel floating caissons for new dry dock, Esquimalt, British Columbia. Name of contractor, Yarrows Limited, Victoria, British Columbia. Date of contract, March 25, 1925. Amount of contract, unit prices as set forth in contract; approximate expenditure, \$414,973.32.

Repairs to east pier, Cobourg, Ontario. Name of contractor, A. A. Outram, Port Hope, Ontario. Date of contract, April 20, 1925. Amount of contract, unit prices as set forth in contract; approximate expenditure, \$9,997.52.

Construction of two steel flat deck scows. Name of contractor, Dominion Bridge Company, Limited, Montreal, Quebec. Date of contract, April 1, 1925. Amount of contract, \$30,425.

Repairs, etc., to tug *Monitor*. Name of contractor, Davie Shipbuilding and Repairing Company, Limited, Lauzon, Quebec. Date of contract, March 19, 1925. Amount of contract, \$19,797.

POST OFFICE DEPARTMENT

The following table shows the payments made in April, 1925, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system, the securing of payment to working men and women of fair wages, and the performance of work under proper sanitary conditions:—

Letter carriers satchels.....	1,039 58

PRICES, RETAIL AND WHOLESALE, IN CANADA, APRIL, 1925

Cost of Living, Prices of Staple Articles, and Index Numbers

THE movement in prices in April continued downward, both the family budget in terms of retail prices and the index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.56 at the beginning of April as compared with \$10.74 for March; \$10.16 for April, 1924; \$10.64 for April, 1923; \$10.26 for April, 1922; \$12.68 for April, 1921; \$15.99 for April, 1920; \$16.92 for June, 1920 (the peak); \$12.57 for April, 1918; and \$7.51 for April, 1914. Fresh eggs showed a substantial seasonal decline while less important declines occurred in the average cost of bread, flour, rolled oats and potatoes. Increases occurred in the cost of beef, fresh and salt pork, bacon, lard, cheese and coffee. Including the cost of fuel and rent with that of foods the total budget averaged \$20.82 at the beginning of April as compared with \$21 for March; \$20.58 for April, 1924; \$21.21 for April, 1923; \$20.66 for April, 1922; \$23.31 for April, 1921; \$25.34 for April, 1920; \$26.92 for July, 1920 (the peak); \$20 for April, 1918; and \$14.32 for April, 1914. Fuel was slightly lower. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, again declined substantially, being 156.5 for April as compared with 161.6 for March; 151.1 for April, 1924; 156.9 for April, 1923; 153.7 for April, 1922; 179.5 for April, 1921; 251.0 for April, 1920; 256.7 for May, 1920 (the peak); and 198.1 for April, 1919. Seventy-three prices quotations were lower, twenty-five were higher and one hundred and thirty-eight were unchanged.

In the grouping according to chief component material five of the eight main groups were lower, two were higher and one was unchanged. The most important decline was in the Vegetables and their Products group which was substantially lower, mainly because of lower prices for grains, flour and other milled products, fresh vegetables and sugar. In this group fruits advanced. The other groups which declined were: Animals and their Products because of lower prices for butter, eggs, fish, furs and hides which more than offset advances in live stock and meats; Fibres, Textiles and Textile Products because

of declines in the prices of wool and silk and in spite of increases in cotton thread, jute, binder twine and manila rope; Iron and its Products because of declines in pig iron, steel billets and wire nails; and in Non-Ferrous Metals because of declines in the prices of antimony, brass sheets, copper, lead, tin and zinc. The Non-Metallic Minerals and their products group advanced somewhat mainly because of an increase in the price of anthracite coal. Chemicals and Allied Products were also slightly higher. The Wood and Wood Products group was unchanged.

In the grouping according to purpose both Consumers' Goods and Producers' Goods were substantially lower. In the former group higher prices for fruits, meats, cotton thread, glassware and pottery were more than offset by declines in the prices of flour, fish, butter, cheese, eggs, sugar and fresh vegetables. In Producers' Goods, painters' materials, leather goods, materials for the textile, clothing, metal working, chemical, and milling industries and also miscellaneous producers' goods declined.

In the grouping according to origin both raw or partly manufactured goods, and fully or chiefly manufactured goods were lower. Articles of farm origin, of marine origin, and of mineral origin were lower, while articles of forest origin were unchanged.

The Canadian Bank of Commerce index of exports fell from 161.89 in March to 154.74 in April. That for imports was down from 166.35 to 163.64. The combined index of both imports and exports declined from 164.12 to 159.19.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number published by the Department since 1910 has been reconstructed by the Dominion Bureau of Statistics, the new index being weighted and based upon the prices of 236 commodities in 1913.* In June, 1923, figures back to 1919 by months and back to 1890 by years were issued. From June, 1923, to the end of 1924 the Department continued to calculate and publish the old series in summary form in the LABOUR GAZETTE in order to afford comparisons with price levels back to 1913. For the detailed analysis from month to month, however, the new index number of the Bureau of Statistics was used.

As the Bureau's index number has now been constructed back to 1913 by months and is available back to 1890 by years, the index number of the Labour Department has been discontinued. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with

* LABOUR GAZETTE, June, 1923, and September, 1924.

those of the classification according to purpose or use in detail.

The special index number of wholesale prices of fifty commodities has also been discontinued. As this gives monthly figures prior to 1913 back to 1901 based on prices in 1913 as 100, it may be used to indicate the general movement of prices by months for that period, the index number of the Bureau of Statistics being available by months since 1913.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of April of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables

somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices showed an upward movement in most localities in April, sirloin steak averaging 28.5 cents per pound in April as compared with 27.6 cents in March, round steak 23 cents per pound in April and 22.2 cents in March, shoulder roast 15.3 cents per pound in April and 14.6 cents in March and stewing beef 11.8 cents per pound as compared with 11.2 cents in March. Veal and mutton showed little change. Both fresh and salt pork advanced, the former averaging 27.4 cents per pound in April as compared with 25.3 cents in March and the latter averaging 24.9 cents in April and 23.9 cents in March. Bacon was substantially higher at an average of 41.2 cents per pound as compared with 38.3 cents in March. The increases in pork and bacon were general. Boiled ham advanced 3½ cents per pound averaging 59 cents. In fresh fish cod steak was slightly higher while halibut and white fish were slightly lower.

* LABOUR GAZETTE, December, 1923, page 1442.

Lard rose from an average of 23.5 cents per pound to 24.3 cents.

Eggs declined substantially, fresh averaging 37.5 cents per dozen in April as compared with 52.5 cents in March and 65.7 cents in February and cooking eggs averaging 33.9 cents per dozen in April, 45.7 cents in March and 54.2 cents in February. Milk declined at Timmins. Butter showed little change, dairy averaging 36.4 cents per pound and creamery 40.7 cents per pound. Cheese showed a general advance from an average of 30.1 cents per pound in March to 31.1 cents in April.

The price of bread declined at Sydney, Halifax, Kitchener, Cobalt, Sault Ste. Marie, Moose Jaw, New Westminster and Vancouver. Soda biscuits were slightly higher, averaging 18.2 cents per pound as compared with 18 cents in March. Flour declined from 6.2 cents per pound in March to 6 cents in April. Rolled oats also were slightly higher averaging 6.2 cents per pound. Rice showed little change while tapioca declined slightly. Canned vegetables showed little change. Onions were slightly higher, averaging 5.4 cents per pound. Potatoes declined from an average of \$1.52 per 90-pound bag in March to \$1.47 in April. Evaporated apples and prunes were steady. Canned peaches advanced from 29.8 cents per tin to 30 cents. Marmalade was slightly lower, averaging 79.3 cents per four-pound tin. Corn syrup averaged 48.8 cents per five-pound tin in April and 49.1 cents in March. Both granulated and yellow sugar were unchanged in the average, slight increases in some localities being offset by declines in others. Coffee again advanced slightly, averaging 60.3 cents per pound in April as compared with 59.8 cents in March. Tea showed little change.

Anthracite coal averaged \$16.69 per ton as compared with \$16.81 in March. Lower prices were reported from Montreal, Belleville, Peterborough, Oshawa, Orillia, Galt, London and St. Thomas. Bituminous coal averaged \$10.28 per ton in April and \$10.34 in March. Hard wood, four feet long, averaged \$12.28 per cord in April. Coal oil was unchanged in the average.

An increase in rent was reported from Trill.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

The downward movement in grain prices continued during April. Number 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged \$1.56 per bushel in April as compared with \$1.76½ in March. The

high price for the month was \$1.69 reached on the 11th and the low of \$1.38½ reached on the 4th. Toward the end of the month prices became firmer due to the relative scarcity of wheat throughout the world and unfavourable reports of the United States winter crop together with the anticipated effect on exchange of the return of England to a gold basis. Coarse grains shared in the downward movement of wheat, oats being down from 52 cents per bushel in March to 50½ cents in April, barley from 84½ cents in March to 78½ cents in April and American corn at Toronto from \$1.36½ per bushel in March to \$1.21 in April. Flaxseed was also down from \$2.50 per bushel in March to \$2.35½ in April. Flour declined in sympathy with wheat, being \$8.95 per barrel at Toronto as compared with \$10.20 in March. Rolled oats fell from \$4.10 per 90-pound bag to \$3.50 and shorts from \$31 per ton to \$28.40. Rubber continued to advance, one grade of Ceylon being 43½ cents per pound as compared with 40½ cents in March. The sugar market was weak. The cause was said to be large prospective crops. Raw sugar declined from \$4.56 per hundred to \$4.03 and granulated from \$6.65 to \$6.41½. Coffee was down from 32½ cents per pound in March to 31½ cents in April. Potatoes at Montreal fell from 73½ cents per bag to 62½ cents. Cattle prices were higher. Western cattle at Winnipeg advanced from \$6.83 per hundred to \$7.09 and choice steers at Toronto from \$7.50 per hundred to \$7.62½. Sheep rose from \$8.37½ per hundred to \$9. Fish prices were lower. Beef, dressed hindquarters, advanced from \$14.50 per hundred to \$15.10. Dressed hogs were up from \$16.12½ per hundred to \$16.50 and mess pork from \$38 per barrel to \$42. Prices of hides continued downward, the price for beef hides being 11½ cents-12 cents per pound as compared with 12½ cents-13 cents per pound in March. Creamery butter at Montreal fell from 36 cents per pound to 35 cents. Cheese was down 3 cents per pound to 25 cents. Fresh eggs at Montreal declined from 39 cents-42 cents per dozen in March to 35 cents-36 cents in April. Raw cotton at New York averaged slightly lower at 24½ cents per pound as compared with 25½ cents in March. The lower prices were said to be due to the improved weather conditions in Texas. Raw silk was slightly lower. Wool showed a decline of from 6 cents to 8 cents per pound. The price of binder twine rose from 13½ cents per pound to 14½ cents. Foundry pig iron at Montreal was down from \$31.20 per ton to \$29.20, and steel billets fell from \$39-\$48 per ton to \$36-\$45. Wire nails at Toronto were slightly lower. Non-ferrous

metals were lower though towards the end of the month an improvement was noted. Copper was down from \$16.30 per hundred to \$15.40, lead from \$9.40 per hundred to \$8.10, tin from 56 cents per pound to 53 cents, silver from

68 cents per ounce to 67 cents and antimony from 18 cents per pound to 16 cents. Anthracite coal at Toronto rose from \$12.24 per ton to \$13.02. Gasoline declined from 24½ cents per gallon to 23½ cents.

INDEX NUMBERS OF WHOLESALE PRICES (WEIGHTED) CALCULATED BY THE DOMINION BUREAU OF STATISTICS (Average Prices 1913 = 100)

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Wholesale prices in Great Britain, France, Belgium, Germany, New Zealand and the United States showed a downward tendency while advances occurred in Italy and China.

Great Britain

The *Times* index number of wholesale prices, on the base 1913=100, was 166.6 in March as against 172.8 in February, a decline of 3.6 per cent. All groups recorded lower levels, the principal declines being in cereals, non-ferrous metals and wool. All foods declined 5.3 per cent and materials declined 2.6 per cent.

The Board of Trade index number, on the base 1913=100, was 166.3 for March, a decline of 1.5 per cent from the February level of 168.8. Cereals declined 6 per cent, meat and fish declined 2.9 per cent, and other food advanced slightly, the total food group declining 2.5 per cent. Iron and steel and other metals and minerals declined slightly; cotton advanced and other textiles declined; and other articles declined slightly. The non-food group declined about one per cent.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77) declined 2.1 per cent to 140.1 for March as compared with 143.1 for February. Both foods and materials declined. In the former group, vegetable foods, also sugar, coffee and tea were lower while animal foods advanced.

COST OF LIVING.—The official index number of the Ministry of Labour, on the base July, 1914=100, was slightly lower at the beginning of May being 173 as compared with 175 for April. The change was due entirely to declines in food prices. The May figures were as follows: food, 167; rent, 147; clothing, 230; fuel and light, 185; sundries, 180; cost of living, 173.

France

WHOLESALE PRICES.—The official index number of *Statistique Generale* on the base July, 1914=100 fell 2 points in March to 524. All foods declined 1.5 per cent, although the animal foods group rose somewhat. All industrial materials rose 0.6 per cent, minerals and metals rising while the other groups declined.

Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, on the base April 1914=100, declined from 559 in January to 551 in February. Food products, fuel, tar products, metal products, chemical products, fats, textile products, resin products, and tobacco products declined while petroleum products and rubber advanced. The other groups were unchanged.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices of 56 articles at Brussels, on the base April, 1914=100, declined from 548 in February to 542 in March. The general index number for the Kingdom declined from 517 in February to 511 in March.

The official index number of the cost of living for a middle class family, on the base 1921=100, was 135.14 in March, as compared with 137.04 in February. Foods and fuel were lower, clothing was slightly higher. The index of the cost of living for a working class family declined from 139.45 in February to 138.19 in March. Clothing advanced slightly but all other groups were lower.

Germany

WHOLESALE PRICES.—The official index number of the Federal Statistical Office for gold prices, on the base 1913=100, declined to 134.4 in March, as compared with 136.5 in February and 138.2 in January. Foods were down from 135.0 in February to 131.9 in March; materials from 139.3 to 139.0; domestic goods from 129.1 to 126.7; and imported goods from 173.4 to 172.9.

COST OF LIVING.—The new index number of the cost of living calculated by the Federal Statistical Office showed a slight advance in March to 136.0, as compared with 135.6 in February. The cost of living, not including rent, was up from 151.9 in February to 152.2 in March. Foods were up from 145.3 to 145.8; rent from 71.5 to 72.2. Heat and light was 138.0 in February and 137.9 in March. Clothing was unchanged at 172.4; sundries was slightly higher, being up from 177.1 to 177.4. The index for food, rent, heat and light, and clothing rose from 131.3 to 131.7.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 625.63 in March, an increase of 0.28 per cent for the month. The separate groups all showed increases with the

exception of miscellaneous animal foods and miscellaneous vegetable products. All foods declined 0.7 per cent and materials advanced 0.8 per cent. The levels reached by the groups textiles, chemicals, minerals and metals, and miscellaneous industrial materials as well as the general index are the highest since the beginning of the compilation in 1921.

China

WHOLESALE PRICES.—The index number of the Ministry of Finance, Bureau of Markets, Shanghai, on the base 1913=100, advanced from 159.2 in February to 160.3 in March. Cereals advanced while other foods were lower. Textiles and fuels were higher, while metals, building materials and industrial materials declined.

New Zealand

WHOLESALE PRICES.—The official index number of the Census and Statistics Office, on the base 1909-13 = 1000, continued to decline, being 1804 in February as compared with 1835 in January and 1866 in December, 1924. The agricultural produce group, the wool, hides, tallow, butter and cheese group, and the general merchandise and crockery group each declined substantially; while the flour, bran, pollard and oatmeal group, the leather group and the chemicals and manures group each showed slight declines. The building materials group and the coal group were unchanged from the previous month's level.

RETAIL PRICES.—The official index number of retail prices of foods in 25 towns, on the base, prices in four chief centres in 1909-13 = 1000, declined to 1561 for February as compared with 1576 in January. A substantial decline in groceries more than offset the advances in dairy produce and meat.

United States

WHOLESALE PRICES.—Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) continued to decline, being down 2.7 per cent in April as compared with March, and 4.4 per cent as compared with the beginning of January. The index is still 6 per cent above the low point of May a year ago, and 25 per cent above the low point, in the deflation of 1920-21, touched on June 1, 1921. The index is however 36 per cent below the peak reached on February 1, 1920. Live stock, provisions, textiles, metals, oils, building materials, chemicals and drugs declined while breadstuffs, hides and leather, naval stores and miscellaneous products advanced. Fruits, coke and coal were unchanged.

Dun's index number (showing the cost *per capita* of a year's supply of commodities) was \$193.281 for May 1, as compared with \$194.537 for April 1. The highest point touched since December, 1920, was in February this year. The index is now 5.5 per cent below that level. Compared with the peak of 1920 a decline of 26.6 per cent has occurred. Breadstuffs and the miscellaneous group advanced while meat, dairy and garden produce, other foods, clothing and metals declined.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, on the base 1913 = 100, rose 0.6 per cent in March to 161.6. Foods and clothing rose slightly; fuel and light declined; and shelter and sundries remained at the levels of the previous month.

The index number of the National Industrial Conference Board, on the base, July, 1914 = 100, was 165 in February and March against 167 in January. Foods were 151 in February and March, having been at 154 in January. Shelter declined one point each month, reaching 182 in March. Clothing declined 2 points to 172 in February and rose to 173 in March. Fuel and light remained unchanged at 169 and sundries at 175.

Boy Immigration Scheme in Australia

A committee appointed by the South Australian Legislative Council to inquire into the boy immigration scheme which was discontinued by the present Government, has presented its report. The scheme was objected to on the ground that the wages were too low, and that the boys were not well treated. The findings of the committee were to the effect that the wages laid down by the Act as a minimum compared favourably with those of apprentices of the same age in any other class of work, and that employers sometimes paid higher wages than the legal minimum. They also considered that the charges of ill treatment were unfounded. The committee, with one dissident, was of the opinion that it would have been in the interest of the State to continue the scheme, making provision for higher wages and for any needed alterations suggested by experience. It recommended that the nomination system by which boys were selected for migration be relieved of certain restrictions and that full advantage be taken of the willingness of several reputable organizations to assist in securing suitable migrants for the State.

IMMIGRATION TO CANADA DURING THE TWO FISCAL YEARS ENDING MARCH 31, 1925

THE report of the Department of Immigration and Colonization for the fiscal year ended March 31, 1924, has been issued recently. It contains statistics of immigrants for the year according to nationality, sex, occupation and destination, together with comparative figures for the previous fiscal year and in some cases for several years.

In the accompanying tables the principal figures for the fiscal year ending March 31, 1925, have been included.

The total number of immigrants during the fiscal year ending March 31, 1924 was 148,560, as compared with 72,887 in the preceding year. Of the total 87,628 were adult males, 38,763 adult females and 22,169 children, as compared with 33,286 males, 24,756 females and 14,845 children, in the preceding year. The number of British arrivals during the year was 72,919, as compared with 34,508 in the previous year. The number arriving from the United States declined somewhat, being 20,521 as compared with 22,007 the year before. In 1923-24 the number of Chinese immigrants was 674, of whom 579 were children. The total number of Chinese in 1922-23 was 711. Japanese immigration increased from 368 to 448; Finnish from 1,171 to 7,640; Belgians from 316 to 1,662; Czecho-Slovaks from 101 to 2,757; Dutch from 119 to 1,149; Germans from 216 to 1,769; Italians from 2,074 to 6,379; Polish from 2,921 to 4,211; Russians from 222 to 3,058; Swiss from 152 to 1,585; and Ukrainian from 36 to 832.

In the report of the work in the British Isles it is stated that British immigrants have been admitted freely when able to comply with the general requirements, such as having sufficient funds to maintain themselves until employment is secured. The number entering has been regulated as far as possible by the demand for labour on this side. Efforts to secure farmers with capital were made, but the lack of good farm land close to railway in the Prairie Provinces, together with the loss in exchange between British and Canadian money, were handicaps. The work of the Department was carried on through district agencies covering all the territory of the British Isles with the head office at London. In all cases when passage assistance was given a medical certificate was required.

Canada was advertised in various ways through lectures in small towns and villages, through atlases and lantern slides in the schools and through the newspapers. In addition to this two exhibition motor vans were kept on the road all the year visiting schools.

On the continent of Europe there are Canadian immigration offices at Antwerp, the Hague, Hamburg, Danzig, Bucharest, Paris and Riga. The regulations in force provided only for the admission into Canada of farmers, farm workers, house workers and the wife and children of any man domiciled in Canada. Many of the countries did not allow any propaganda work but the desire of the people to better their condition led many to emigrate, and many others to seek for information about Canada. During the summer of 1923 a Swiss organization receiving support from the Swiss Government assisted between three and four hundred emigrants to come to Canada. The Netherlands Government also assisted a party of about fifty in a similar way. A delegation from Denmark visited Canada during the year to obtain information which they could furnish their Government in regard to Canada as a field for immigration. In the autumn of 1923 nearly 2,000 experienced bushmen went from Czecho-Slovakia and Jugo-Slavia to work for various lumber companies in Canada. These men were also experienced farm labourers. The system of inspection of immigrants at embarkation ports was reported to be satisfactory. The transportation companies were aware of the regulations, of the class of immigrants desired and of the work of selection carried on by the inspectors. Thus the hardships formerly experienced by immigrants who were brought from the interior to the ports only to be sent back were avoided.

The report of the supervisor of United States Agencies referred to the difficulties in getting settlers to emigrate. The greatest of these was the inability to realize from their holdings sufficient to purchase lands in Canada. The agents confined their efforts to securing farming classes. Information on Canada was supplied to schools and further educational work was carried on in placing exhibits of Canadian produce at country fairs.

The report of the Commissioner of the Eastern Division with reference to inspection at border ports showed that 20,612 persons sought admission, of whom 11,281 were allowed and 9,331 rejected. In the Western Division 8,701 were admitted and 391 rejected. In the Pacific Division 1,763 were admitted and 71 rejected.

The number of rejections at ocean ports was 992 during the year, of these 187 were British, 6 American and 799 from other countries. The number of deportations was 2,106 of whom 1,377 were British, 417 Americans and 312 from other countries.

In the Western Division 13,587 farm labourers were admitted through border ports, while 11,800 came from Great Britain and Ireland. With regard to the latter it was pointed out that some of them had been out of employment in the old country and of these some were unable or unwilling to hold their places on the farms. These men complained that they were brought out under misrepresentation basing the claim on the fact that advertisements had appeared in the British papers stating that no farm experience was necessary to secure positions on the farms in Canada during harvest and that farmers had discharged them when they were found to be inexperienced. Many of these complaints were investigated and it was found that they were discharged not because of their lack of experience but because of unwillingness or inability to do a reasonable day's work. It was also pointed out that the majority of the men

settled down at their new work without complaint and that many though inexperienced earned wages of from \$4 to \$7 per day for the harvest season. After the harvest many found positions at their own trades and have had their families join them.

In the report of the Commissioner for the Western Division it was pointed out with regard to Chinese immigration that on October 2, 1923, the Chinese Immigration Act became operative restricting the entry into Canada of people of Chinese origin to certain classes with the result that Chinese immigration has practically ceased since that date.

The report of the Supervisor of the Women's Division showed that during the year 8,288 British women came out as houseworkers, of these 3,187 were English, 1,227 Irish, 3,789 Scotch, and 85 Welsh. Of a total of 13,471 British women who came unaccompanied 8,288 were domestics, 4,345 came to join relatives

and 838 came to be married. These women were all required to have medical certificates before sailing.

The number of unaccompanied women from the continent totalled 3,562. These were all medically examined and in future will be required to carry a certificate.

Steamship companies now carry conductresses who look after all unaccompanied immigrant women on board ship. Then on arrival in port they are met by women officers of the Department who assist the new arrivals in many ways. Government conductresses are employed on the train. All these officers are of great assistance to the women immigrants.

Women coming to Canada seeking employment are directed to the Women's Hostels and are placed in positions through the Employment Service of Canada. The hostels are in Halifax, St. John, Montreal, Toronto, Winnipeg, Regina, Calgary and Vancouver. In these free accommodation for forty-eight hours is allowed to all women coming to Canada seeking employment as houseworkers.

Under the Empire Settlement Scheme a loan to cover transportation may be made to British women to enable them to come to Canada for domestic work. It is stated that ninety per cent of these women are satisfactory and that the percentage of those failing to repay their loans is small. During the year the Society for the Oversea Settlement of British Women arranged for the transportation of 620 women and children. These were sent out in special parties in charge of a woman appointed by the Society. (On another page of this issue will be found a note on the recent progress made by the Department of Immigration in connection with settlement of British families on farms in Canada).

The report on juvenile immigration showed that 2,080 juveniles came to Canada in the year under review as compared with 1,184 in the previous year. The number of applications from Canadian homes for children during the year was 22,193 as compared with 17,005 the preceding year.

Immigration into Canada during the Fiscal Year ending March 31, 1925

The Department of Immigration and Colonization has issued a statement as to immigration during the fiscal year ending March 31, 1925, including a table showing the number of Canadians returning after an absence of six months or longer in the United States.

Immigration to Canada During First Quarter of 1925

The nature and extent of the immigration into Canada during the first three months of the year 1925 is shown in detail in the table on page 532 which gives the numbers of immigrants according to their sex, occupation and nationality. The table is compiled from information supplied by the Department of Immigration and Colonization. A summary table is also given, showing the total number of immigrants from Great Britain, the United States, and other countries for each month of the quarter, with comparative figures for certain previous quarters.

The total immigration for this twelve month period was 111,362 made up of 53,178 from the British Isles, 15,818 from the United States and 42,366 from other countries. In the same period 43,775 Canadians returned from the United States so that if this number is added to the general immigration total of 111,362 the combined count is 155,137.

IMMIGRATION TO CANADA DURING THE FIRST QUARTER OF 1925

	From Great Britain and Ireland	From U.S.A.	From other countries	Totals
January, 1925.....	543	634	830	2,007
February, 1925.....	542	801	867	2,210
March, 1925.....	3,273	1,298	2,004	6,575
First Quarter, 1925.....	4,358	2,733	3,701	10,792
Fourth Quarter, 1924.....	6,032	2,956	6,370	15,358
First Quarter, 1924.....	8,792	3,274	11,814	23,880

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1925

THERE was a noticeable falling off in the number of fatal industrial accidents reported to the Department of Labour during the first quarter of the present year. The number of deaths reported was 202, of which one resulted from an accident in August, 1923, and eleven from accidents which happened in 1924. The total number of fatalities reported for the quarter was 191 (77 in January, 59 in February and 54 in March) as compared with 325 in the previous quarter, and with 291 in the first quarter of 1924. No large catastrophes were reported. There were, however, four deaths among seamen due to the foundering of the *Malaspina* at Millbank Sound, British Columbia, in January, and three deaths of snowplough men in February when a train split the switch and struck a snowplough at Lachute, Quebec. Forty-seven deaths were reported in the transportation and public utilities group, 28 of which were on the steam railways and 10 in water transportation. Thirty-eight deaths were reported in the logging industry, 33 in the mining industry, 29 in the manufacturing industries, 16 in the construction industries and 16 in agriculture. Infection following injuries resulted in death in four cases, septicaemia in one and pneu-

monia in one. Strain in lifting was specially stated as the cause of death in two cases. Among the accidents due to machinery nine resulted from being caught in the machinery, in most cases being due to the clothing catching; the breaking of machinery caused three deaths, and falls against saws, etc., three deaths.

During the quarter attention was drawn to three accidents which were duplicated in the annual report of the Department published for 1924 in the March issue of this GAZETTE. These had to do with accidents to a miner at Matheson, Ontario, a miner at St. Thomas Township, Ontario, and a stone contractor at Kingston, Ontario, in the months of March, June and May respectively. After deducting these three accidents and adding the twelve appearing in the supplement attached hereto, the total number of industrial fatalities reported to the Department for the year 1924 to date is 1,279.

The following table has been prepared from information received from all sources available, but it does not necessarily include all the industrial accidents that may have occurred:—

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1925

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farm boy.....	New Liskeard, Ont.....	Jan. 2..	14	Struck by saw which burst.
Farmer.....	Grenville, Que.....	" 4..	Kicked by horse.
Labourer.....	Toronto, Ont.....	" 4..	Trapped while burning slash in bush.
Farmer.....	Stamford Township, Ont.....	" 12..	69	Fell from barn which was being demolish- ed.
Farmer.....	Milestone, Sask.....	" 21..	67	Crushed under rack blown over in wind- storm.
Farmer.....	Kemptville, Ont.....	" 21	Struck by falling tree.
Farmer.....	Brockville, Ont.....	" 21	42	Struck by falling tree.
Farmer.....	Crossfield, Alta.....	Feb. 2..	18	Clothing caught in key of crankshaft of engine.
Farmer.....	Burks Falls, Ont.....	" 7..	Crushed between loads of bark. A load left at top of hill slid back.
Farmer.....	Swan River, Man.....	" 24	65	Struck by falling tree.
Farmer.....	Estevan, Sask.....	Mar. 5..	17	Fell from windmill.
Farmer.....	Milo, P.E.I.....	" 8	62	Slipped on ice striking head against bob- sleigh.
Farmer.....	Osceola, Ont.....	" 17..	22	Misjudged height of load and was caught by top of doorway when entering barn.
Farmer.....	Glanworth, Ont.....	" 24..	Struck by falling limb.
Farmer.....	Markstay, Ont.....	" 24..	42	Jumped from box car of moving train.
Farmer.....	St. George, Que.....	" 27	over 21	Crushed under load of logs which capsized.
LOGGING—				
Labourer.....	Pakesley, Ont.....	Jan. 2	26	Kicked by a horse.
Labourer.....	Riding Mountains, Man.....	" 7..	20	Crushed by falling tree.
Feller.....	Lake Cowichan, B.C.....	" 7	28	Falling tree struck log which flew up striking workman in stomach.
Labourer.....	Rainy Lake, Ont.....	" 8	61	Crushed by rolling log.
Labourer.....	Blind River, Ont.....	" 9	36	Crushed by tree.
Woodsmen.....	Riding Mountain, Man.....	" 10	Struck by falling tree.
Woodsmen.....	Minnedosa, Man.....	" 14	20	Struck by falling tree.
Woodsmen.....	Hodgson, Man.....	" 15	Pneumonia following lockjaw caused by frost bite.
Logger.....	Roy, B.C.....	" 16	18	Struck by falling snag.
Bull cook.....	Topaz Harbour, B.C.....	" 17	54	Slipped and fell in log chute.
Logger.....	Hopetown Pass, B.C.....	" 17	30	Carried between stump and log when knocked under haulback by swinging log.
Labourer.....	Glendale, Ont.....	" 19	36	Crushed leg under log.
Signalman.....	Reid Bay, B.C.....	" 19	Struck by small tree knocked down by yarding line.
Riggerman.....	Reid Bay, B.C.....	" 20	28	Struck on neck by haulback line.
Loggers (2).....	Courtenay, B.C.....	" 23	40, 30	Struck by log being hauled through woods.
Labourer.....	Flanders, Ont.....	" 26	24	Struck by tree.
Logger.....	Allico, B.C.....	" 27	44	Fell against valve gears.
Woodsmen.....	Abercorn, Que.....	" 29	Struck by falling tree.
Woodsmen.....	Port Coquitlam, B.C.....	" 29	Crushed by falling tree.
Woodsmen.....	Yahk, B.C.....	" 29	40	Crushed by rolling log.
Teamster.....	Flanders, Ont.....	" 30	Crushed by log.
Woodsmen.....	Hawkesbury Island, B.C.....	" 31	39	Struck by beam. Roof collapsed owing to weight of snow.
Logger.....	Calahoo, Alta.....	Feb. 2	21	Struck by tree which fell when hit by another falling tree.
Manager and scalar with timber company.	Buckley Bay, B.C.....	" 11	Drowned when gas boat sank.
Loader.....	Port Renfrew, Ont.....	" 21	Struck by log which rolled from car.
Hookman.....	Nimkish Lake, Ont.....	" 23	Unhooking on float, slipped off log and was drowned.
Logger.....	Otway, B.C.....	" 24..	55	Jumped off tree and fell on end of small hidden stump.
Boomman.....	Frederick Arm, B.C.....	" 27	24	Slipped off boom stick—drowned.
Loader.....	Campbell River, B.C.....	" 27	40	Crushed by top log which fell while chokers were being unhooked.
Engineer.....	Fanny Bay, B.C.....	Feb. 27	29	Derailment of logging engine.
Sanding man with lumber com- pany.	Nelson, B.C.....	" 28	17	Struck by log. Either fell or walked into flume.
Logger.....	Robson, B.C.....	" 28..	19	Struck by log while sanding the log chute.
Sawyer.....	Chisholm, Alta.....	Mar. 2..	17	Struck by falling tree.
High rigger.....	Headquarters, B.C.....	" 3	Tree fell across guy line causing it to unwrap from stump encircling workman.
Hookman.....	Allico, B.C.....	" 5	26	Struck by top of spar tree which broke off.
Woodsmen.....	Bromptonville, Que.....	" 17..	15	Struck by falling tree.
Labourer.....	New Liskeard, Ont.....	" 25	Legs broken in runaway.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1925—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAP- PING—				
Fisherman.....	Ridgeway, Ont.....	Mar. 3..	Drowned when ice broke.
Fishermen (2)....	At sea (Atlantic).....	" 18..	Dory swamped—drowned.
MINES, SMELTERS AND QUARRIES: Metalliferous Min- ing—				
Miner.....	Anyox, B.C.....	Jan. 2..	47	Caught between cars one of which was struck by incoming empties.
Mucker.....	Levack, Ont.....	" 2..	37	Crushed between car and platform.
Miner.....	Kirkland Lake, Ont.....	" 21..	24	Finger crushed—died under anesthetic.
Labourer.....	Levack, Ont.....	Feb. 8..	Burned in bunkhouse.
Smelterman.....	Trail, B.C.....	" 11..	30	Fell from trestle.
Trip runner and labourer (2).	Springhill, N.S.....	" 17	21, 24	Cars ran off road.
Miner.....	Keer Lake, Ont.....	Mar. 6	21	Crushed by rock.
Trammer.....	Britannia Beach, B.C.....	" 10	37	Premature blast.
Labourer.....	Timmins, Ont.....	" 23	Buried in rock in a slope.
Coal Mining:				
Miner.....	North Sydney, N.S.....	Jan. 1..	Struck by fall of stone.
Miner.....	Wayne, Alta.....	" 2	36	While pulling out coal, piece came down on hand. Infection.
Miner.....	Drumheller, Alta.....	" 8..	Buried by fall of rock.
Machiner helper..	Nacmine, Alta.....	" 8..	28	Struck by falling cap-rock.
Miner.....	Lomond, Alta.....	" 22	Cave-in of coal.
Miner.....	New Waterford, N.S.....	" 22	57	Caught between box and prop.
Miner.....	Glace Bay, N.S.....	" 30	34	Crushed by box from the tippie.
Miner.....	New Aberdeen, N.S.....	" 30	Crushed between box cars.
Miner.....	Bridgeport, N.S.....	" 31	34	Crushed by coal box.
Machine helper..	Evansburg, Alta.....	Feb. 2..	37	Struck by falling coal.
Miners (2).....	Springhill, N.S.....	" 17..	21, 24	Crushed by trip which jumped track.
Miner.....	Glace Bay, N.S.....	Mar. 4..	Fall of stone.
Timekeeper.....	Wayne, Alta.....	" 28	52	While shovelling ashes into river place on which he stood was undermined.
Non-metallic min- eral mining and quarrying:				
Driller.....	Thetford Mines, Que...J	an. 19	25	Fell from side of open pit.
Employee at gravel pit.	Allumette Island, Que..	" 19..	60	Premature explosion.
Trammer.....	Thetford Mines, Que.....	Feb. 25..	23	Uncoupling of train on incline—crushed.
Millman.....	East Broughton, Que.....	Mar. 4..	Caught by belt and pulley.
Workman at gravel pit.	North Gower, Ont.....	" 3..	20	Cave-in of gravel pit.
Workman at gravel pit.	Selkirk, Man.....	" 9..	Cave-in of overhanging clay.
Labourer.....	Buckingham, Que.....	" 13..	Struck by derrick box in open pit.
Clay products and structural materi- als:				
Labourer.....	Toronto, Ont.....	Mar. 6..	Cut skin—infection.
Employee at cem- ent works.	Point Anne, Ont.....	" 7..	Struck by material precipitated from blast.
MANUFACTURING— Vegetable foods, drink and tobacco:				
Miller.....	Souris, Man.....	Jan. 13..	47	Fell from car during switching operations.
Miller.....	Medicine Hat, Alta.....	Feb. 12..	44	Fell from elevator.
Animal Foods:				
Employee at packing plant.	Elmwood, Man.....	Mar. 14..	Clothing caught in revolving shaft.
Textiles:				
Employee of flax company.....	Exeter, Ont.....	Feb. 18..	42	Shive entered finger—infection.
Rubber Goods:				
Labourer.....	Toronto, Ont.....	Jan. 12	Strain in lifting.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FIRST QUARTER OF 1925—*Con.*

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
<i>Con.</i>				
<i>Saw and planing mills:</i>				
Mill worker.....	Madawaska, N.B.....	Jan. 17..	26	Struck by log from saw.
Proprietor.....	Broughton West, Que....	" 26..	Hit by piece of iron when machinery broke.
Mill worker.....	Gloucester Co., N.B....	" 28..	42	Struck by board from saw.
Mill worker.....	Pictou, N.S.....	Feb. 16..	Clothing caught in machinery.
Mill worker.....	Vancouver, B.C.....	" 20..	Struck by descending cant while cleaning carriage.
Mill worker.....	Drummond, N.B.....	" 23..	42	Lockjaw developed from injury to hand.
Rotary sawyer....	York Co., N.B.....	Mar. 5..	27	Struck by pulley which burst.
Employee.....	Quebec, Que.....	" 20..	Caught in machinery.
Millwright.....	Bell River, Ont.....	" 19..	43	Fell against trimmer saw.
Employee.....	Ste. Rose de Waterford, Que.	" 27..	21	Fell upon circular saw.
<i>Wood Products:</i>				
Employee at furniture factory.	Stratford, Ont.....	Mar. 6..	70	Fell down stairway.
<i>Pulp, paper and paper goods:</i>				
Employee at paper mill.	Cap Madeleine, Que....	Jan. 9..	21	Crowbar slipped and entered man's abdomen while using it to remove belt from pulley.
Employee.....	Thorold, Ont.....	Feb. 9..	34	Crushed between bale and steel plate which slipped when man was standing on it loading truck.
Employee.....	Sheet Harbour, N.S....	Mar. 26..	66	Struck by piece of wood which flew from saw.
Labourer.....	Connaught, Ont.....	" 26..	Caught in shafting.
<i>Iron, steel and products:</i>				
Machinist.....	Winnipeg, Man.....	Feb. 19..	Scalded.
Employee at metal factory.	Toronto, Ont.....	" 26..	Train struck automobile.
Labourer.....	Hull, Que.....	" 28..	21	Crushed by falling moulding box.
Car repairman...	Halifax, N.S.....	Mar. 7..	46	Crushed under car which fell when jacks gave way.
Car repairman...	Toronto, Ont.....	" 19..	24	Crushed by steel chute on coal car.
<i>Chemical and allied products:</i>				
Employee of chemical factory.	Hamilton, Ont.....	Jan. 6..	53	Caught in shafting of revolving machine.
<i>Miscellaneous Industries:</i>				
Machinist.....	Oshawa, Ont.....	Mar. 18..	Strained back while lifting.
Labourer.....	Toronto, Ont.....	" 25..	18	Fell off building.
Glazier.....	Sydney, N.S.....	Jan. 31..	Slipped, striking head while carrying box of glass.
CONSTRUCTION—				
<i>Building and Structures:</i>				
Carpenter.....	Toronto, Ont.....	Jan. 10..	50	Fell while fastening brace to framework of window.
Painter.....	Victoria, B.C.....	" 28..	41	Fell while altering lever of swinging platform.
Carpenter.....	Trail, B.C.....	Feb. 11..	31	Fell from trestle.
Workman.....	Toronto, Ont.....	" 12..	61	Fell off scaffold.
Carpenter.....	Hamilton, Ont.....	" 13..	47	Cut finger—infection.
Workman.....	Toronto, Ont.....	Mar. 5..	Fell.
Workman on church spire.	St. John, N.B.....	" 13..	42	Fell while taking down staging.
<i>Railway construction:</i>				
Bridgeman.....	Napanee, Ont.....	Feb. 26..	57	Struck by train.
Labourer.....	Ford, Ont.....	Mar. 19..	26	Struck by train.
<i>Miscellaneous Construction:</i>				
Labourer.....	Humberstone, Ont.....	Jan. 23..	Fell off crane.
Labourer.....	Oliver, B.C.....	Feb. 5..	58	Crushed by falling cement panel while repairing ditch.
Labourer.....	Senneville, Que.....	" 16..	22	Fell down bridge landing on block of cement.

Labourer.....	Cumberland, B.C.....	" 15..	40	Was handling big sewage pipe when he slipped and was jammed between that pipe and another.
Longshoreman...	St. John, N.B.....	" 19..	Fell down port tank of steamer.
Woodsmen.....	York Co., N.B.....	" 27..	20	Struck by falling tree. Septicaemia.

Progress of Co-operation Since the War

A report presented to the United States Senate last December by the Federal Trade Commission on "Co-operation in Foreign Countries," has since been published. It contains the conclusions reached by special investigators who visited fifteen countries in Europe. They found that the total number of persons directly belonging to co-operative societies was over thirty million, representing, with their families a total of 120,000,000 people who benefit by co-operative effort in some form. The world war has given such an impetus to the movement that, as the report states, "it stands out as one of the most prominent features of the economic structure of the world to-day." In some of the larger European countries, the United Kingdom, France and Germany, consumers' co-operative societies rank among the largest producers and distributors of the necessities of life. In England and Germany the commissioners found that nearly half the population was affiliated with the consumers' wholesale and retail societies.

"While all classes," it stated, "have shared in the advantage of co-operation in various countries of Europe it is mainly the wage-earners' families and the middle classes generally, as well as the population in the agricultural districts, which have attached themselves to the co-operative movement."

The Commission recommends consideration of the following features of the co-operative movement in foreign countries with a view to their application on this continent: (1) Farmers' co-operative sales societies for marketing agricultural produce as directly as possible from the farm to the urban household; (2) rural co-operative credit societies of the Raiffeisen type managed by the farmers themselves and limited to small areas; (3) distribution of electric power in rural communities through farmers' co-operative societies; (4) retail consumers' societies in thickly populated rural districts; (5) co-operative distribution of fuel; (6) distribution of milk by consumers' co-operative societies; (7) co-operative export

associations of farm producers; (8) decentralization of administration of co-operative organizations.

The report groups co-operative societies into three classes (1) consumers' societies, (2) agricultural societies, and (3) credit societies. The so-called "workers' co-operatives," where workmen are their own employers and work under a self-appointed manager, as well as co-operative insurance and building societies, are not included.

The functions of the consumers' co-operative or as it is also known, the distributive society, is to supply its members with unadulterated goods free from the middleman's profits. For this purpose consumers' societies operate retail stores, where members purchase their household supplies. The retail co-operative stores generally purchase their supplies from a co-operative wholesale society of which they are members. The total number of co-operative consumers' societies throughout the world

is in excess of 90,000, with about 40,000,000 individual members. Consumers' organizations in the United States number about 3,000, with a membership of about 775,000.

The co-operative agricultural societies obtain for the individual small farmer the benefits of large-scale organizations, either through collective buying of farm supplies or through joint disposal of farm products. There are more than 80,000 co-operative farmers' societies with millions of members in the various countries of the world. Agricultural organizations of this class in the United States number about 15,000.

The function of the co-operative credit society is to promote thrift among its members by accumulating their savings and to make loans to them and to supply its members with cheap credit facilities. The total number of co-operative credit societies in the world exceeds 105,000. Of these, about 536 are in the United States.

RECENT LEGAL DECISIONS AFFECTING LABOUR

City Policemen May be Members of Union

IN a decision given last month in the Superior Court at Montreal, Mr. Justice Coderre declared illegal and null and void certain resolutions and orders which had been passed by the City Council of Montreal, forbidding the members of the City Police Force to be members of Policemen's Federal Labour Union No. 62, a union which holds a charter from the Trades and Labour Congress of Canada.

The circumstances leading up to this judgment were outlined in the Department's publication "Labour Organizations in Canada," as follows:—

Acting on the recommendation of its executive committee, the Montreal city council, on March 19, 1923, reaffirmed its decision of September 15, 1922, expressing its opposition to municipal employees belonging to trade unions. It appears that three police sergeants (all members of Policemen's Federal Union No. 62) were suspended. The policemen's union regarded all three suspensions as resulting "from the animosity of the executive committee to the union."

At a meeting of the union a resolution was adopted calling upon the City Council to initiate an investigation into the causes that brought about the suspensions. In its demand, the union received the support of the Montreal Trades and Labour Council. The agitation for a civic inquiry had the effect of reopening the entire question as to whether or not civic authority should countenance the functioning of a union of civic employees, or to what extent, if any, such employees had the right to organize. This question had arisen on several previous occasions, notably in December, 1918, when a dispute, bordering on a strike, occurred between the city and the unions of policemen, fire-

men and the aqueduct workers. At that time a board of investigation appointed under the provisions of the Industrial Disputes Investigation Act adjudicated the dispute. The decision of the board was accepted by both parties, the first clause of which was in part as follows: "Policemen may have their society or association for the consideration of their own affairs, but must not be affiliated with any other association, society or a union."

The City Council at its meeting on March 19, 1923, by a vote of 24 to 8, reaffirmed its decision as embodied in the text of the executive committee's report of September 15, 1922. This report was as follows: "Your committee is opposed to the police union as it now exists; your committee is of the opinion that no federation of municipal employees should exist as regards the members of the police force, the firemen, and the employees of the aqueduct; the committee, however, has no objection to the existence of the police benevolent association and that of the firemen, or of any other similar organization in the aqueduct department."

As an outcome of the action of the City Council, the executive committee, after consultation with the chief of police, issued an order requiring that all new members of the city police force sign an affidavit that they "would not belong to any union."

The controversy between the executive committee of the City Council and the union was resumed on November 29, 1923, when the executive committee, according to press reports, promulgated an order, through the chief of police, to the effect that the policemen must resign from their union or leave the force. The union then made application for an injunction, and on December 11 of the same year, Mr. Justice Coderre granted the union's petition for an interlocutory injunction to restrain the city from putting its order into effect, pending the decision of the court proceedings taken to quash the order. The move to secure this injunction was made in conjunction with an application asking that the court declare as *ultra vires* the resolutions of the civic administration opposing the union. As on a previous occasion, the Montreal Trades and Labour Council again sup-

ported the union, and by a unanimous vote on December 6, it protested against the attitude of the City Council towards the policemen's organization. On December 7, the City Council passed a resolution (by a vote of 21 to 12) instructing a committee of investigation to inquire "into all grievances which might effect the good understanding that should prevail between the administrators of the city and the members of the police force." This special aldermanic committee decided (by a vote of 8 to 5) at a meeting on December 26) not to recognize the policemen's union, this attitude being based on the decision of the board of investigation established in 1918. In so doing, the committee was sustained by the City Council on December 28, 1923, by a vote of 22 to 10. Subsequently, argument was commenced in the Superior Court on the double action taken against the city by the union in which the court was asked to annul the resolutions of the administrative bodies (referred to above) and also to make permanent the temporary injunction.

Judge Coderre's Decision.—Mr. Justice Coderre reviewed fully the circumstances which gave rise to the action. Referring to the award of the Board of Arbitration in 1919, which is mentioned above, he stated that it condemned any federation comprising organizations of civic employees, and censured any affiliation of those whose principal duty it was to protect public safety, with societies or organizations which would render the execution of their duties to the public more difficult. But, on the other hand, the answers given in the award by the arbitrators to demands made by the police authorized the latter to associate within certain limits.

By the arbitrators' decision, the police were given permission to belong to a society or association for the government of their affairs, but they were not to affiliate with any other association, society or union. According to the terms of the Board's award, the city agreed to negotiate directly with the union, through its officers or agents, on all questions relating to the welfare and interests of members of the union. The then existing administrative commission of the city also agreed to receive and negotiate promptly with the representatives of the union. In another paragraph of the award, the city undertook that no member of the union should be solicited or required, verbally or in writing, to discontinue his membership in the union. The corporation also gave the union permission to receive contributions in police stations, and to put up notices therein relating to union business.

The judge based his decision on the provisions contained in the act passed by the Legislature of the province of Quebec in 1921 (chapter 46) the Municipal Strike and Lockout Act, as follows:—

"2520ob. In this section the following words, expressions and terms shall have the meaning and application respectively given them, to wit:—

"(a) The word 'employer' means any person or body of persons presiding over, administering or con-

trolling any public municipal service as defined in this article;

"(b) The word 'employee' means and includes policemen, firemen, waterworks employees and those in charge of the incineration of garbage;

"(c) The words 'public municipal service' include every municipal corporation having a fire, public safety, waterworks or sanitary incineration service, in which at least ten persons are employed.

"2520oc. This section shall apply to any claim or dispute between employers and employees in connection with the following matters:—

"(a) The price to be paid for work done or in course of being done, whether the disagreement has arisen with respect to wages, working hours, by night or by day, or the length of day or night work;

"(b) The dismissal of one or more employees on account of membership in any labour union.

"2520od. It shall be unlawful for an employer to declare or cause a lockout or for employees to strike, on account of any dispute mentioned in the foregoing article before such dispute has been submitted to a board of arbitration.

The court declared that this Act expressly prevented the city from ordering the disbanding of the union. "This dispute," he continued, "should have been submitted to a board of arbitration under the provisions of the provincial law relating to municipal strikes and lockouts. It is erroneous to contend that the word 'lockout,' meaning the case where employers close their establishments and refuse to give work to workmen, in order to force the latter to accept conditions imposed upon them, cannot be applied to the city of Montreal, which is obliged, at the risk of compromising public safety, to assure the continuity of this essential service. This is one of those cases where one must stop at the intention of the legislator, rather than at the strict acceptance of the words in which he expressed such intention. The intention is evident, and failing a term to express the meaning exactly, the legislator used one which is sufficiently, or very nearly, clear and precise. Therefore, it must be held that the law of 1921 forbade the city from adopting the resolutions in question, and from causing the issuance of the order complained of. These resolutions are illegal and exceed the power of the city council and the executive committee as well as those of the chief of police."

Workman's Loss Measured by Percentage of Disability

A young man earning wages at the rate of about \$900 yearly met with an accident which resulted in ankylosis of the left middle finger. The court awarded him compensation under the Workmen's Compensation Act on the ground that there had been a reduction in his earning capacity estimated at 2 per cent, with a resulting loss of about \$18 in the year. The employer was therefore ordered to pay the sum of \$180.50 which would be required to

compensate the employee for his loss. The judge based his calculation on the principle that the amount of compensation should be determined by the degree of loss in earning capacity rather than of loss in actual earnings (This principle was discussed in connection with the case *Labrecque versus Charette*, reported in the March issue of this GAZETTE.)

(Quebec—Auger versus Gatineau Company Limited.)

Heir of Deceased Workman May Claim Compensation

A workman who had received injuries in the course of his employment brought an action for damages against his employer under the Workmen's Compensation Act. The employer contested the claim, and before the case was settled the workman died. He had made a will bequeathing all his property to his sister, who continued the claim for compensation in her own name. The sister's claim was denied by the Superior Court at Three Rivers, but the Court of King's Bench, on appeal, reversed that decision, holding that no reason existed for denying the right of the claimant as legatee to recover any sums due to her brother at the time of his death.

(Quebec—Duperron versus the St. Maurice River Boom and Driving Company, Limited.)

Master not Liable to Indemnify Servant for Defence Against Unfounded Charge

A chauffeur was employed by the owner of a private automobile, who arranged that his wife's mother should have the car at her disposal during his absence from home. While she was being driven in the car by the chauffeur the car upset and she was killed. The police prosecuted the chauffeur for manslaughter, but he was acquitted. Before the trial, however, the owner of the car returned home, and dismissed the chauffeur from his employment. The chauffeur now sought under the Master and Servant Act to recover from his former employer the costs incurred by him in defending the charge of manslaughter. The case was tried before a jury in the County Court, and the plaintiff was awarded the amount of the costs incurred in the criminal proceedings subject to taxation, with costs of action. The owner appealed against the decision in the Second Divisional Court. The chauffeur rested his right to recover entirely upon the supposed obligation of a master to indemnify his servant for the expense of defending himself against an unfounded charge of misconduct when engaged upon his master's business. The Appeal Court held that no authority existed for sup-

posing that a master is bound to indemnify his servant against a false accusation of misconduct, even though that misconduct might be in the course of employment. "If the precise thing constituting the misconduct had been authorized and instructed by the master there would be an implied obligation to indemnify the servant against the consequence of his obedience. That was far from being the case." The owner's appeal was allowed with costs. (Ontario—Proctor vs. Seagram).

Dominion and Provincial Authority

The Chief Justice of Canada, the Right Honourable F. A. Anglin, in his judgment in the recent case of *The King versus the Eastern Terminal Elevator Company*, dissented from the judgment of the majority of the judges of the Supreme Court of Canada in regard to the validity of section 95, subsection 7, of the Canada Grain Act, which enables the Dominion authority to regulate the export grain trade of Canada. In opposition to the majority opinion, the Chief Justice held that the enactment of such a provision was within the competence of the Parliament of Canada. In the course of his judgment he referred in the following terms to the judgment by Lord Haldane in the case recently before the judicial committee of the Privy Council regarding the validity of certain sections of the Industrial Disputes Investigation Act, 1907 (LABOUR GAZETTE, February, 1925):—

"It is established that in legislation properly ascribable to the exercise of jurisdiction conferred by one of the enumerative heads of s. 91 of the British North America Act, the Dominion Parliament is supreme. Such legislation, even in provisions properly ancillary, may deal with matters that would fall under provincial jurisdiction, if they were not appurtenant to a subject specifically assigned to the Dominion. Viscount Haldane, in the judgment cited, attributes the like right to Parliament 'when the subject matter (of its legislation) lies outside all of the subject matters enumeratively entrusted to the province under s. 92.' This view was reiterated by his Lordship in the Lemieux Act case, 1925, when, referring to *Russell v. The Queen* (1882), he says: 'It has been observed subsequently by this Committee that it is now clear that it was on the ground that the subject matter lay outside Provincial Powers. . . . that the Canada Temperance Act was sustained.'

That Act undoubtedly deals with some matters *prima facie* within section 92. In alluding to the Lemieux Act judgment I feel that I should respectfully take exception to the suggestion there first made, that the Board which decided *Russell v. The Queen* must be considered to have had before their minds 'an emergency putting the national life of Canada in unanticipated peril' as the occasion of the enactment by Parliament of the Canada Temperance Act, 1878. Referring to this supposed emergency, his Lordship says: 'Their Lordships think that the decision in *Russell v. The Queen* can only be supported to-day, not on the footing of having laid down an interpretation, such as has sometimes been invoked of the general

words at the beginning of s. 91, but on the assumption of the Board, apparently made at the time of deciding the case of *Russell v. The Queen*, that the evil of intemperance at that time amounted in Canada to one so great and so general that at least for the period it was a menace to the national life of Canada so serious and pressing that the National Parliament was called on to intervene to protect the nation from disaster. An epidemic of pestilence might conceivably have been regarded as analogous. I cannot find anything in the judgment delivered by Sir Montague E. Smith in the *Russell* case suggestive of such a view having been entertained by the Judicial Committee. On the contrary, the whole tenor of the judgment seems to me inconsistent with its having proceeded on that basis. I should indeed be surprised if a body so well informed as their Lordships had countenanced such an aspersion on the fair fame of Canada even though some hard driven advocate had ventured to insinuate it in argument."

Elsewhere the Chief Justice, after setting forth the rights of the Dominion Parliament to legislate in matters of national concern continued as follows:—

"So regarded, the Canada Grain Act may, I think, be supported without having recourse to the existence of abnormal conditions involving some extraordinary peril to the national life of Canada recently indicated as a justification for the invasion by Parliament of the provincial field when legislating under the general power conferred by s. 91. But if there should be in the statute provisions essential to its effective operation for the purpose aimed at which must be regarded as trenching on the provincial domain, and if it should therefore be deemed necessary to meet this test of their validity, I know of nothing more likely to create a national emergency in Canada than a judicial determination that the Dominion Parliament lacks the power to legislate for the regulation of the export grain trade of the country."

Agreement Against Public Policy Cannot be Enforced

A County Court of Appeals in Ohio recently decided that "contracts by which an employer agrees to employ only union labour, are contrary to public policy when they take

in an entire industry of any considerable proportions in a community so that they operate generally in that community to prevent or seriously deter craftsmen from working at their craft or workmen from obtaining employment under favourable conditions without joining a union. And such was the contract here, and it must necessarily be held to be in conflict with the public policy of our law, and illegal and void."

The case in which this judgment was given concerned a contract that was in force from 1906 to 1924 between the Cleveland Railway Company and Local 268 of the Amalgamated Association of Street and Electric Railway Employees of America, which contained a section providing that all employees must, after 60 days of employment, become members of the union. A disagreement arose last year between the parties to the contract, and the legality of the agreement was challenged by Company. The Court further stated: "Contracts that are illegal and against public policy, have always been discouraged by the courts and no action based upon such a contract is maintainable either in law or in equity either directly or indirectly to uphold the contract. The authorities quite uniformly agree that the court should look upon such a contract as no contract at all, and that an effort to enforce it either directly or indirectly, or to claim benefits thereunder in a court of law or equity, is an effort to procure the assistance of the court to carry out something that is against the interest of the public. And this the court will not do, even though the parties have acted under such an agreement, and reaped the benefits thereof or have been lax and tardy in invoking the claim of illegality."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

JUNE, 1925

[NUMBER 6

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE employment situation in Canada continued to show an improvement during April, but the general level of employment was still slightly less favourable than in the same month last year. Reports from the Employment Service of Canada indicated a considerable increase in the volume of business transacted over the preceding month, the average number of vacancies and placements recorded daily being about 57 per cent higher than in March and although the daily average of orders received was slightly lower than April of last year, placements were more than ten per cent higher than during that period. At the beginning of May the percentage of unemployment among the members of trade unions throughout Canada was 8.7 as compared with 8.5 per cent at the beginning of April and with 5.1 per cent at the beginning of May, 1924. The number of local unions from which reports were tabulated was 1,500, with a combined membership of 154,738 persons. Reports from 5,923 firms showed that they were employing 748,448 persons on May 1, as compared with 716,866 persons on April 1. The employment index number, which is based on the number of workers employed on January 1, 1920, as 100, stood at 90.8 on May 1, 1925, as compared with 87.2 in the previous month, and with 91.8 on May 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.48 at the beginning of May as compared with \$10.56 for April; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, advanced to 159.1 for May as compared with 156.5 for April; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); and 201.4 for May, 1919.

The time loss caused by industrial disputes was somewhat greater in May than either in

the previous month or in May last year. Fifteen disputes were in progress at some time during the month, involving 12,975 employees, and resulting in a time loss of 299,369 working days. Corresponding figures for April, 1925, were as follows: Twelve disputes involving 11,951 and resulting in a loss in working time of 290,633; and for May, 1924, fourteen disputes, 7,955 employees, and 202,710 working days.

Industrial Disputes Investigation Act, 1907

The full text of the new act to amend the Industrial Disputes Investigation Act, 1907, is given on another page of this issue. The purpose of the amending act was stated in the issues for March and May, as being to limit the application of the act of 1907 to matters that are not within the legislative authority of any province. The bill was amended in the House of Commons to provide that either party to a dispute should be required to give at least 30 days' notice of an intended or desired change in existing working conditions affecting wages and hours, and in the event of a dispute, to make it unlawful to declare a strike or lock-out until a Board under the act shall have dealt therewith; further, employers violating the provisions of the act by declaring a lock-out, or by making a change in wages and hours contrary to the act, become liable to a fine ranging in amount from \$100 to \$1,000 for each day of the lockout.

Combines Investigation Act, 1923

An interim report of the registrar under the Combines Investigation Act in connection with an alleged combine among potato dealers in New Brunswick, was presented in Parliament by the Minister of Labour early this month. An outline of the report is given on another page of this issue.

New safety regulations in Alberta.

The Workmen's Compensation Board of Alberta issued during May revised regulations under the Workmen's Compensation Act (Accident Fund). These regulations dif-

fer in some respects from those issued in April last year, the most important changes being in the accident prevention rules for freight and passenger elevators, which have been expanded so as to ensure the adoption of the most modern safety appliances.

The regulation governing contributions by workmen for medical aid is amended by the omission of the former provisions in regard to industries in which no plan for medical aid has been approved by the Board. In such industries, if they come under Schedule I of the Act each employer was formerly required to deduct four cents per shift from each of his men, and if they were in the logging, sawmill or box-making group under Schedule II the employer was similarly to retain two cents per shift, the amount so collected to be forwarded to the Board as required. Employers are still required to submit quarterly medical aid reports, accompanied by a remittance of the amount due.

Another important amendment is in the section governing the furnishing by employers of first aid kits, employers having more than 50 workmen being now required to have continually in their employment a workman holding a certificate of competency to render first aid to the injured, approved by the Board.

A new regulation (No. 2) provides that no person shall use, or allow to be used or operated, any machine or other appliance unless the regulations of the Board have been complied with; and that "every workman shall properly use all accident prevention devices provided by the employer" in accordance with the act or regulations under the act. (In this connection it may be noted that in a recent police case in Alberta, a workman who had received injuries in the eyes through not wearing goggles while working at an emery wheel, was made to pay the cost of the action. Rule 49 for Accident Prevention provides that "goggles shall be supplied for workmen while working at emery wheels.")

Workmen's payments for medical aid.

mentions that in the mining and steel and iron groups most of the medical aid is furnished under schemes adopted by the workmen themselves. The section of the Workmen's Compensation Act relating to the provision of medical aid by employers or by workmen was added in 1920, and reads as follows:—

15A. (7) Where any employer has now established or hereafter establishes in connection with any industry carried on by him an arrangement for furnishing medical aid to his workmen which in the opinion of the Board is at least as favourable to the workmen as that herein provided for, the Board, after investigating the facts and considering the wishes of both the workmen and employer, may approve such arrangement, and as long as such approval remains unrevoked such arrangement may be continued in lieu of the medical aid herein provided for, and the employer may be entitled to such reduction in his rate of assessment as the Board shall deem just.

The Board for the purpose of approving of any such arrangement may take into consideration contributions voluntarily or by agreement with workmen made by the employer to any relief or other association of which at least the majority of workmen of such employer are members. Any arrangement or practice in force on December 31, 1919, and which has since been continued for providing medical aid for workmen in any industry although at the expense of workmen may be temporarily continued unless otherwise ordered by the Board pending the adoption of such arrangement as may meet with the approval of the Board, and while such temporary arrangement or practice is so continued the Board shall not be liable to furnish medical aid to any workmen entitled to medical aid under such arrangement or practice. This section shall be effective as of January 1, 1920.

Notice of accidents in Manitoba.

The account in the last issue of the GAZETTE of recent labour legislation in Manitoba mentioned an amendment to the Workmen's Compensation Act limiting to 30 days the period within which an injured workman or his dependent must notify the employer of the injury. Notification was previously called for "as soon as practicable." When this amendment was under discussion in the legislature Mr. John Queen, the leader of the labour party in the House, endeavoured to have its wording modified by the addition of the words "whenever possible" in connection with the requirement as to thirty days. He believed this change would bring the amendment more into line with the actual intention of the special commission on whose recommendations the amending bill was based. The legislature agreed that if the clause as it stood in the bill should be found to operate to the detriment of the workmen a new clause would be substituted next year on the lines of Mr. Queen's proposal. Elsewhere the amending act enlarges the discretionary powers of the Board in such a manner as to permit them to consider deserving cases even although the time limit for reporting to the employer may not have been observed.

It should be noted that the time limit of thirty days, which is fixed in the amendment refers only to notices to be given by workmen to their employers, and is not connected with the notices that are to be given to the Workmen's Compensation Board. Longer periods

are generally allowed for notices to the Boards, this limit being fixed at one year in Manitoba, British Columbia, New Brunswick and Nova Scotia, at six months in Ontario, and at three months in Alberta.

Interprovincial conference on vocational education.

The Technical Education Branch of the Department of Labour of Canada has just issued a special bulletin (No. 12) containing a full report of the proceedings at the interprovincial conference on vocational education which was held at Calgary last April. The meeting was called by the Federal Director of Technical Education at the request of the officials who are responsible for the administration of secondary vocational education in the four western provinces. The object of the conference was to secure co-operation between the four provinces in regard to vocational training so that fuller benefits might be secured under the grants received by the provinces severally under the Dominion Education Act, particularly in connection with evening school work and correspondence courses.

In regard to instruction by correspondence it was considered that such work could be conducted from a common centre at a considerable reduction in the cost of overhead, equipment and supervision. The conditions surrounding evening class instruction are common to the four provinces, and while it was felt that each province should continue to administer its own classes; it was also considered that efficiency would be furthered if all the provinces could use their material jointly and revise their systems in the light of common experience. The conference adopted the following resolution:—

Whereas, it is desirable that co-operative action be taken in the four western provinces in the formulation of standard courses for vocational correspondence and evening schools and, whereas it is desirable that investigation be made of the feasibility of co-operative action along other lines of vocational education; therefore this conference recommends that each of the four western departments of education appoint one representative to act upon an interprovincial vocational education committee for the purposes of: (a) considering and reporting upon standard courses for correspondence and evening schools and indicating methods for their compilation and distribution; (b) reporting to the various departments upon the scope of interprovincial co-operation; (c) preparing the details of any scheme or agreement arising out of clauses (a) and (b) and submitting same to the departments of education concerned.

Copies of the bulletin may be obtained on application to the Technical Education Branch, Department of Labour, Ottawa.

The Miners' International

The Miners' International, an organization founded in 1890, established a permanent office at London on May 1, the thirty-fifth anniversary of its birth. The decision to have a permanent bureau and permanent staff was made at the convention held at Geneva in 1920, but until this year no action could be taken owing to the general financial depression. The International Secretary is Mr. Frank Hodges, J.P., who was general secretary of the Miners' Federation of Great Britain from 1918 to 1924, and was a member of the late labour government. Mr. Hodges recently issued a statement on the lessons of the past and the future problems of the International.

"Its main object," he says, "will be to establish for all the maximum uniformity of conditions of hours, wages, safety legislation, etc., upon the basis of the country where these have reached their highest point. The variations at present existing in the coal-producing nations are many. Their very existence in the present state of the world's coal trade threatens to become a source of great danger, not only to the miners of those countries, that are socially backward, but they keep the miners of the best situated countries either chained to their present conditions or tend to drag them down to the inferior conditions of the backward countries. Through the medium of the Permanent Bureau correct information as to the economic and social conditions of the miners in each country will be made known to all and it will exert both its economic and moral influence upon the various Governments and coal-owning groups throughout the world, not only to elevate the conditions of the badly situated, but make possible a steady improvement in the lot of all.

"It will be clearly understood that the Miners' International in no way claims to be an effective substitute for strong and well-disciplined national organizations, nor is it intended in the slightest degree to interfere with the national autonomy of any great national organization. These must continue their steady march, fulfilling their own national destiny. In many cases they have not yet reached national unity. There will always arise questions as between employers and employed which will be truly national in character, and must be settled on a national basis. In the pursuance of these national objectives the Miner's International hopes to play a useful and effective role. There are questions, however, which are already assuming international importance and which will have to be tackled with spirit and energy

upon a purely international basis. Whilst it would be most anxious to help every national miners' movement in an hour of trial, it must proceed beyond national confines in such questions as the unifying of miners' conditions throughout the world; the orderly regulation of the world's coal supply to the world's demand, with the consequential elimination of the haphazard, senseless, and cutthroat methods of to-day, typical of unbridled and uncontrolled capitalism."

Unemployment and investments. The Industrial Institute, a body recently formed in Great Britain for the study of the fundamental problems of industry, has recently published a memorandum on the subject of unemployment. This memorandum is signed with the following well-known names:—Henry Bell (late general manager, Lloyds Bank), Miss Margaret Bondfield (chief woman officer, National Union of General and Municipal Workers), Lord Burnham (president, Empire Press Union), Mr. F. S. Button (member of the Industrial Court), Mr. J. R. Clynes, M.P. (president National Union of General and Municipal Workers), Mr. C. T. Cramp (industrial general secretary, the National Union of Railway Workers, and chairman of the Executive of the Labour Party), Mr. Frank Hodges, Mr. J. M. Keynes (editor, *The Economic Journal*), Mr. Walter Leaf (chairman, Westminster Bank), the Bishop of Manchester, Sir Richard Redmayne (chairman-governor, Imperial Mineral Resources Bureau), Lady Rhondda (vice-chairman of Messrs. David Davis and Sons, Limited, coal owners), Lord Salvesen (member of the Judicial Committee of the Privy Council), Captain H. Riall Sankey (past president, Institute of Mechanical Engineers), Mr. Roger T. Smith, past president Institution of Electrical Engineers), Sir Josiah Stamp (hon. secretary and editor, Royal Statistical Society), Mr. Gilbert C. Vyle (deputy president, the Association of British Chambers of Commerce), Mr. J. C. A. Ward (chairman, London and District Association of Engineering and Allied Employers), and Lieutenant-Colonel the Hon. F. V. Willey (president, Federation of British Industries).

The memorandum suggests, as a remedy for unemployment, the further regulation by the State of the flow of the investment of capital. The working population of Great Britain is increasing at the rate of about 500 persons daily, less the number who emigrate, but the increase of national savings, if properly directed, would suffice to develop industry so as to engage all the available labour resources.

At the present time, however, in the absence of effective state control "the direction of the flow of investment is determined by the security of the proposed investments and the return which may be anticipated from them."

State control of investments has been considered on two recent occasions. The authorities of the Treasury and the Bank of England suggested some months ago, in this connection, that special attention should be concentrated on the development of such industries as would add quickly to employment. Again, the committee under the Trade Facilities Act concentrated their efforts on the support of industries "which do not appeal immediately to private enterprise."

The report proceeds to discuss the question: "Can this practice, based on a principle which has now the sanction of experience, be applied to a somewhat different though related end? Is it possible that in addition to, or instead of, devoting a small percentage of our available national resources to the development of certain industries on the ground that they can, immediately, employ labour,...a corresponding amount, under similar expert advice, might be invested in industries which, though not immediately attractive to the private investor, might yet correct a certain lack of balance in industrial development which arises from co-ordinated activities, and produce results in regularity of employment much more than proportionate to the sum thus invested?"

"Experience has shown" the report continues, "that in certain directions the practice of letting things alone tends to confusion. The disorderly growth of our industrial towns is a case in point. Every one can see, to-day, that the town planning movement is giving good results, and if such an act could have been put into operation, say, in 1780, rather than in 1909, our modern towns would be much better than they are. Is this not something comparable with the orderly development of industry, the study of the possibilities of which we advocate as desirable and possible?"

The Industrial Institute is constituted so as to include, as far as practicable, representative men associated with each of the various group interests and points of view concerned in industry. Its principal object is "to develop a descriptive science of the present working of the industrial system, including production, distribution, and finance, especially from the point of view of the human relations and ethical considerations involved, and to strengthen the foundations of the science of industrial ethics." The Institute will also promote scientific research into "those questions

of industrial economics and industrial ethics which touch the relations and interests of the groups into which the development of the industrial system has divided the nation."

Joint board in the garment industry

An account is given on another page of this issue of the constitution and aims of the Joint Board of Sanitary Control in the Garment Industry at Toronto. This Board is modelled on a similar board which has been in existence in connection with this industry in New York for the past twelve years, in which period it has succeeded in bringing better sanitary and working conditions and improving the health and efficiency of the workers. A full account of conditions in the garment industry in New York is contained in the report of the "Governor's Advisory Commission" in New York State, giving the results of an investigation into conditions in the Cloak, Suit and Skirt Industry in New York city. Among other recommendations the commission suggests that the duties of the Sanitary Board should be extended. They consider that all the factors in the industry should be represented on the board. While they do not concur in the proposed adoption of a union label in this industry, they recommend that a sanitary label approved by the Joint Sanitary Board should be used by manufacturers conducting union shops.

The Commission strongly recommend "that the manufacturers and jobbers' association shall co-operate with the union in establishing and maintaining an unemployment insurance fund for the benefit of the members of the union. The fund shall be made up by contributions from the manufacturers, sub-manufacturers or contractors and the union or individual members of the union; the contributions of the employers to the unemployment insurance fund shall be equal to 2 per cent of the weekly payroll and that of the workers to 1 per cent of their weekly wages. The fund shall be administered jointly under proper rules and provisions to be agreed upon by both parties."

"We believe," the report elsewhere states, "that the parties in a highly seasonal industry as the cloak and suit industry should establish an unemployment insurance fund by voluntary arrangement with a view to encouraging the lengthening of the seasons of employment and to relieving the employees from some of the more acute hardships that a highly seasonal industry imposes upon them."

In regard to industrial peace the Commission is firmly of the opinion "that in order

to maintain peace in the industry and to promote the welfare of all the parties concerned, as well as of the consuming public, machinery should be set up for the impartial determination of all questions in dispute that may arise between the four factors already mentioned, that is, the union, the independent manufacturers, the sub-manufacturers and the jobbers. Each party to any dispute may name a representative to serve on a trial board but in the event that the representatives do not reach an agreement satisfactory to all of them, the decision of the impartial chairman shall be final and binding upon the parties involved. If the parties are unable to agree upon the impartial chairman within two weeks after the agreements have been entered into he shall be appointed by the Commission."

Many of the special difficulties in this industry arise out of the complications created by the multiplication of sub-manufacturers and contractors who conduct shops. Some of these difficulties were outlined in the LABOUR GAZETTE for June, 1924, in connection with an unemployment insurance scheme which was established last year in the industry in New York.

In regard to seasonal unemployment the Commission suggests that the industry might be stabilized by a more scientific organization of production by standardizing products, storing of surplus stock, and securing orders in advance.

Conditions in Toronto garment workshops

A report on conditions in the garment factories and workshops at Toronto was presented early this month to the Joint Board of Sanitary Control by Miss Pauline Newman, of New York. The report states that common towels and common cups are in use in many of the factories visited. Several employers occupying lofts where sanitary and safe conditions were difficult to obtain from the owners of the building, had signified their intention of moving when their lease expired. In only four factories did she find poor lighting and a need for artificial illumination. In 13 factories she found the floors were not clean, and in nine factories the windows were thick with dust and dirt. Lavatory accommodation in eight factories was bad and in direct violation of the Factory Act of the province, while in 29 factories there were no dressing rooms, let alone rest rooms, for female workers. In practically every factory the first-aid kit consisted of a bottle of iodine and some cotton. In twelve factories there were no fire extinguishers.

Importance of building construction in winter

The American Construction Council, at their recent Spring conference in New York strongly recommended that construction work should be spread over the entire year to avoid the present extravagantly wasteful periods of intensified operation over a few months and the resulting idleness during the rest of the year. This problem has been under the consideration of the council for the last two years, working in accord with the United States Department of Commerce, which has been engaged in a special analysis of the causes of this condition under Secretary of Commerce Hoover.

It was stated that the present custom of doing the principal construction work at practically the same time in all parts of the United States has given rise to serious congestion in the transportation system of the country in time of prosperity and has compelled the railroads to provide abnormal car facilities, which has left them with empty cars during slack periods of the year.

The Canadian Association of Building and Construction Industries also recommend spreading building operations over the year. In their memorandum presented to the National Conference regarding Winter Employment in Canada, held at Ottawa last September (LABOUR GAZETTE September, 1924) the following statement was made:—

"The crowding of the market in June, and the neglect of it in January, is one of the most important causes for high costs in construction. The summer congestion means high cost not only for summer but for the whole year. It is the scarcity of men at that time which dictates our relations with labour both as to working conditions and rates of wages. It is the short abnormal market which affects our material prices. Contrast the excitement of the summer months of an average building season with its scarcity of workmen, its material and supply houses vainly trying to keep everyone satisfied with deliveries, with the unemployment of the winter and the idle plants and material yards with overhead charges piling against them higher every day. What a burden summer construction, yes, all construction, carries on account of this.

"If then it can be shown as fact that the prejudice against fall and winter work is not properly founded—it becomes an urgent duty on the part of all of us who have a knowledge of these things to correct this condition as quickly as possible."

Guaranteed wage not a minimum wage.

last issue, states that "it was the custom of this company to guarantee a certain amount to many of the piece-workers. Thus, their

records, whether cards or pay-sheets, showed this guaranteed rate. The earnings above the line of this basis guarantee were known as 'bonus.' The better workers commonly earned wages above the guarantee, while the slowest workers commonly received only the guarantee, as their earnings by the piece-rates fell short of it. The Board had no authority, nor concern, with the size of this guarantee. Its interest lay entirely in the wages paid. A piece-work system with a guarantee is none the less a piece-work system. . . . The great majority of the female employees of the company were piece-workers with a guarantee. A very few had no guarantee. About one-fifth were time-workers.

It transpired that the company was accustomed to pay piece-workers for any time during which piece-work was not supplied to them, and that the rate of pay for such periods was that of the guarantee, which sometimes fell below the prescribed levels of the Order of the Board. The Board's accountant was instructed to investigate to what extent these time-work intervals prevailed. He reported that they represented a very small proportion of the working time of the piece-workers, and it would seem that they may be considered as a negligible factor in respect of wage payments. Evidence was submitted, . . . and confirmed by the Board's accountant, that the company had met the condition that at least eighty per cent of its piece-workers were earning, at least, the minimum wages prescribed. Thus, nothing is legally due other piece-workers."

As already noted in this GAZETTE, the Board found that there were no grounds for the charge that this company had falsified its records for the purpose of eluding the Board's orders.

Minimum wage laws in United States.

The legislature of Ohio, in 1913, appointed a special committee, composed of three members of the Senate and three of the House, to study the subject of minimum wage legislation for women, having in view the enactment of a minimum wage law for Ohio. The Committee recently filed their report, which contained the following conclusions:—

"1. That the so-called mandatory minimum wage legislation is unconstitutional and, therefore, should not be enacted by the General Assembly. 2. That the non-mandatory law similar to that which is in operation in Massachusetts is of little effect because its provisions cannot be properly enforced, the only weapon of enforcement being public opinion. 3. That minimum wage legislation in other states has not brought about the remedial result which was sought, and has not

been enforced in several of the states which have enacted it. 4. That such legislation would have a serious effect upon Ohio's industries and employees in competition with those of other states if the minimum wage were fixed at a point above the wages paid in other states. 5. That there is no necessity for enacting minimum wage legislation for the State of Ohio because women employees of this state are receiving wages equal to those paid in states where this law is in operation."

The committee refers to the decision of the United States Supreme Court in 1923 declaring unconstitutional the minimum wage law enacted by Congress for the District of Columbia. This judgment, which was noted in the LABOUR GAZETTE, May, 1923, was to the effect that the law in question violated the article of the United States constitution under which freedom of individual contract is secured to citizens, and that it widened the police powers of the state to a degree that was dangerous to private liberties. Following this decision of the United States Supreme Court the Wisconsin and Minnesota minimum wage laws were found by the state courts to be unconstitutional, except that in the Minnesota case the court recognized the right of the State legislature to regulate contracts made in regard to employees who were under age. (LABOUR GAZETTE, January and March, 1925.)

Progress of old age pensions in United States.

The *American Labour Legislation Review* states that the movement for non-contributory old age pensions continues in the United States. Old age pension bills have been passed this year by Wisconsin and California. By the middle of April similar measures had been passed by one House in the Legislature of Indiana and of New Jersey; in Massachusetts, an old age pension bill was lost by 116 votes to 100; in Texas and Kansas bills were reported favourably by a committee, but failed to pass either House; the Connecticut measure was rejected by the Committee; and bills were pending in Michigan, Illinois, Minnesota, Ohio, and Maine. An investigating committee has been created by the Colorado Legislature, and a bill to create a commission, with an appropriation of \$10,000 to investigate the condition of needy aged persons in New York State, passed one House. In Pennsylvania the old age pension act of 1923 was recently declared unconstitutional by the Supreme Court of the State (LABOUR GAZETTE, April, 1925), but the legislature has already made appropriations for the further study of the question. In Nevada the 1923 law has been repealed and a new law enacted. The Montana law of 1923, and the pioneer act of Alaska still stand.

Mothers' aid in Manitoba

A reduction of 5 per cent in the individual allowances to mothers under the Child Welfare Aid of Manitoba was made on May 1. The reduction became necessary, it was announced, owing to the unexpected extension of the services coming under the Act when it took effect last September, without a proportional increase in the general appropriation for its administration. Further consideration of the allowance will be made by the Provincial government when a report on the situation has been received from the Welfare Supervision Board.

By an amendment of 1924 to the Child Welfare Act of 1922, the functions of the Mothers' Allowance Commission established under the Mothers' Allowance Act, 1916, were transferred to the new Child Welfare Board, the latter body having authority to promote the welfare of children generally. Some account of the act was given in the issues of the LABOUR GAZETTE of May and July, 1924. An Alberta Child Welfare Act similar to the Manitoba act is outlined in the present issue.

First number of Official Labour Gazette of South African "Labour Gazette"

The first number of the *Official Labour Gazette of the Union of South Africa* was published in April. An introductory note states that "the *Gazette* has followed logically upon the creation of a separate Department of State to deal with labour and kindred questions, and will supply a need in keeping the public of South Africa in touch with the work of the Department and with the more important aspects of labour and industrial conditions in the Union and in other countries." The purpose and functions of the new Ministry of Labour are described in a special article. "The Constitution of the Ministry of Labour (25th July, 1924) was due to a realization of the existence of acute conditions in the economic and industrial life of the Union with which no department was appointed to deal comprehensively and effectively. One department here, another department there, had certain duties of administration of certain laws dealing with labour and industrial questions, but it was not the special duty of any department to deal with labour questions as a whole; nor was there any administrative machinery to co-ordinate the various functions and to give effect to a national policy. The Department of Labour has assumed some of the scattered functions of Government which were in existence. It has, for example, taken over the relief works under the Labour Division of the Mines and Industries Department; it has

taken over from the same Division the administration of the Industrial Conciliation Act, the Apprenticeship Act, the Juveniles Act, and the Regulation of Wages Act (1918); but its functions will extend further and have been designed definitely to this end."

The primary functions of the Department are as follows: (1) Employment generally, including Government and relief works; (2) Conciliation boards, industrial councils, registration of trade unions and employers' organizations, private registry offices, etc.; (3) Juvenile affairs; (4) Apprenticeship; (5) Wage boards; (6) International Labour Office affairs; (7) Factories.

The *Official Labour Gazette* at present appears under the same cover as the *South African Journal of Industries*, the official organ of the Ministry of Mines and Industries.

South African advisory council of labour Colonel the Honourable F. H. P. Creswell, the first Minister of Labour of the Union of South Africa, has appointed an Advisory Council of Labour designed

to keep his department "in effective touch with the views of the people outside the range of its own machinery and personnel," and to investigate and advise upon the problems of labour and unemployment from various aspects. The interests for which the Council stands include (1) the rural interests, including the difficult problem of the "poor white"; (2) the three great urban industries of mining, manufacturing, and commerce; (3) labour in its broadest sense; and (4) social welfare and women's interests.

The Council is an advisory body only, and is not responsible for the policy of the Ministry of Labour. At the same time the aim has been to place on the Council persons of outstanding experience in different sections of the industrial life of the country, and to ask them to pool their experience in dealing with and advising upon the subjects referred to them for consideration. The Council meets at intervals at the instance of the Minister. Committees of the Council have already examined the problem of unemployment as relating to the rural areas and to the large urban centres respectively.

International Goodwill Day. By a proclamation dated May 15, 1925, the Lieutenant Governor of British Columbia appointed May 18 to be observed throughout the Province as "International Goodwill Day," when teachers were required to hold exercises aiming to make their schools an influence in the movement

to promote goodwill among the nations and to advance world peace.

This movement originated in a convention held at San Francisco in 1923, by the World Federation of the Education Association. The Association, which aims at promoting goodwill and world peace through education and the work of the schools, recommended that May 18 should be observed in all countries as International Goodwill Day. Strong support for this suggestion was given in British Columbia by several public bodies, including the Parent-Teacher and the Teachers' Federations, and the Lieutenant Governor's proclamation followed.

Bonus payments in pulp and paper mills in U.S.A. Some bonus systems in connection with wage payments in the pulp and paper mills of the United States are described in the bulletin of the United States Bureau of

Labour Statistics, which was reviewed in the last issue of the *LABOUR GAZETTE*. Twenty-one out of 199 mills paid bonuses which increased the earnings of employees over and above the regular fixed wage rates. These bonus systems are based on earnings, service, production, speed, and in one case on a premium plan. Only one establishment had a bonus based on earnings, and that firm discontinued it on December 31, 1920. Five establishments had bonus systems based on length of continuous service of wage earners in the establishment. One establishment paid a bonus of 1 per cent for each year of continued service, based on earnings at the end of the year. One establishment paid a bonus to skilled labour of 2 cents an hour for each year of service while unskilled labour received a bonus of 1 cent an hour for each year of service. One establishment paid a bonus of 5 per cent for service of 5 years and less than 10 years; of 10 per cent for service of 10 years and less than 15 years; of 15 per cent for service of 15 years and less than 20 years; and of 20 per cent for service of 20 years or more. Twelve establishments had a production on efficiency bonus. Under this bonus plan, as the mill earned more because of greater production in the same working time and with the same number of employees, the employees' earnings were increased at a specified rate; for example, if the standard normal or average capacity of the mill is 100,000 pounds of paper per day and the mill produced during any period 1,000 or more pounds in excess of that normal amount, then the company gave the men concerned an additional rate as a bonus, the rate being based usually on 1,000 pounds produced over and above specified amount. One establishment had a

"speed bonus" in addition to a "premium plan," two systems of bonus which are seldom found. This establishment had a scale of six speeds, ranging from the minimum to the maximum speed of each machine. The bonus was paid on an hourly basis according to the rate specified in the speed scale; for example, for the number of hours that the machine was kept at No. 1 speed the sum of 1.04 cents per hour was added to the regular rate of compensation; for the number of hours that the machine was kept at No. 2 speed the sum of 1.66 cents per hour was added.

Dangerous practices at railway crossings

The Board of Railway Commissioners for Canada has again issued a warning against the dangerous practices of motorists, drivers of other vehicles and of pedestrians at railway crossings. They state that notwithstanding safety devices and cautionary signals, people take chances and disregard safety, and that negligence is found both at unprotected and protected crossings. The Canadian National Railway lines, from November 1, 1924, to May 20, 1925, show 30 cases where there was danger at protected crossings due to negligence of those using the crossings. The Toronto, Hamilton and Buffalo lines during the same period show two cases. The Canadian Pacific Railway lines, from November 1, 1924, to January 31, 1925, show 99 cases of dangerous practices by automobile drivers; 134,369 cases of pedestrians, and 8,143 cases of bicycles passing under lowered gates. The Board publishes tables showing the careless practices at these crossings. In one case an automobile ran over a crossing and struck a train injuring the brakeman; in two other cases the watchman was nearly knocked down through the reckless driving. A number of cases are recorded where gates were broken and other damage resulted through automobiles running into lowered gates.

Mr. Victor A. Sinclair, K.C., of Tilsonburg, formerly a member of the Provincial Legislature, has been appointed chairman of the Workmen's Compensation Board of Ontario in succession to Mr. Samuel Price, who is retiring on account of ill-health. Mr. Price had been chairman of the Compensation Board since its inception under the Act of 1914.

Acting on representations from the Toronto Building Trades Council, Premier Ferguson of Ontario stated early this month that an investigation would be undertaken into the use of prison labour at the Whitby Asylum for

the construction of the central heating tunnels, and into the alleged underpayment by 10 cents an hour of carpenters on the new administration building. The representatives of the Council stated that they had no objection to long-term prisoners learning trades, but short-term men, such as were being used, could not master the work. The Premier said that prisoners would be used only for the excavating of the tunnel.

A delegation from the Civic Employees' Protective Association of Victoria, British Columbia, waited upon the works committee of the City Council asking that the bylaw governing vacations be amended to permit of holidays with pay for seasonal employees having two seasons of service to their credit, provided that at least six months' service shall have been given the city in each year. One day's holiday for each month served in a year was the basis proposed. Many of the men have served the city for periods of nine to twelve years it was stated. Under a former bylaw they claimed seasonal men were given vacations with pay.

A new building scheme has been adopted by the Mond Nickel Company in connection with houses for their workmen. The company offers building lots to their employees for a nominal rental and is backing them in the building of homes. Under the scheme, a workman can build his house for the cost of the materials making a deposit of about 20 per cent of the cost of materials, the remainder to be paid in monthly instalments which amounts in most cases to about \$12 a month, or the usual rental of a company house. The interest is about two per cent, or just enough to cover the cost of administration of the plan.

The New York State Federation of Labour, in its educational programme, urges the establishment of public forums in every school, under the direction and control of elected boards of education and of advisory committees.

The Council of the Quebec Bar Association is considering action in regard to the alleged practice of certain persons in exploiting workmen in the City of Quebec by professing to act as their agents in securing compensation for injuries. One of these agents recently entered into an arrangement with an injured workman to approach the employer in order to secure indemnification. Compensation was paid and the agent claimed 75 per cent of the amount, and in addition \$78 which he stated to be due to the Company's doctor.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of May showed a further increase, which exceeded that registered on May 1, 1924; the index number however was slightly lower than on that date.

The employment situation at the end of May, 1925, was reported by Superintendents of the Employment Service of Canada to be as follows:—

In the Maritime Provinces farm work was reported as progressing favourably, although it had been retarded to some extent by the weather. In both Nova Scotia and New Brunswick the catches of fish were reported as bountiful. In both provinces road construction was gradually increasing; building construction, while it showed considerable activity in New Brunswick, was not so brisk in Nova Scotia. Manufacturing seemed to be retaining its former steady pace. In the mining districts of Nova Scotia the strike continued to effectually prevent any operations in the larger coal mines. Trade was reported as fair.

In the province of Quebec the demands for farm hands were reported as good. Summer logging operations, which were on the increase, were requiring the services of some workers. Manufacturing was improving quite noticeably, particularly in the City of Montreal. The boot and shoe, textile, and rubber industries all showed more activity. All kinds of construction were favourable from an employment point of view and seem to be developing in magnitude with the progress of more favourable weather conditions. The demand for women domestics was heavy in Montreal so much so, in fact, that it deserves special mention.

Ontario superintendents reported that, while the heavy demand for farm labour which had been experienced in previous weeks, had slackened, calls for workers of this sort continued to be frequent. In the manufacturing centres of Southwestern Ontario factories continued to show improvement. In many cases former employees were taken back, and in some cases new workers were taken on. In certain factory centres this gradual improvement on the part of the chief industries was reflecting itself in lessened unemployment. In the Northern Section of the province outside work did not appear to be gaining momentum with its usual rapidity, although bush and railway construction were serving to diminish unemployment to some

extent. The fact that the demands for labour in Northern Ontario were somewhat less than is customary at this period of the year may be attributed largely to the less favourable weather conditions during the early part of the season.

In the province of Manitoba earlier heavy demands for farm hands had fallen off, and at the end of May there was no difficulty in securing plenty of experienced men for all vacancies. In the city of Winnipeg building construction was fairly active, but elsewhere there was not much activity reported in this line. Railroad construction was expanding, with several workers being taken on. Very little work of a casual nature was presenting itself, and in Winnipeg particularly there were many applicants to accept any employment of this kind which might develop.

From Saskatchewan superintendents came reports that the demands for farm hands were decreasing and in some centres slight surpluses of available help were reported. This was in contrast with some weeks earlier, when shortages of workers were reported in some districts, but this is accounted for by the progress which had been made in the interim on spring farm work. The demands for construction workers were not very heavy and consequently were easily met. Railroad construction was not as yet very brisk, though some work was in prospect. A shortage of domestic workers, particularly for rural jobs, appeared to be practically uniform throughout the province.

In common with the other western provinces, Alberta reported decreased demands for farm hands with plenty of labour available, though the demand for the period of the year might well be considered as favourable. In the Lethbridge zone sugar beet growing, a new industry in this section, had already created employment for considerable numbers of men, and indications pointed toward the further expansion of this type of work. Building and railroad construction work was fair throughout the province. From the Calgary district some activity in oil well development was reported. The logging and coal mining industries were both seasonally quiet. Generally speaking, a gradual improvement throughout the province was noticeable.

The logging and lumbering industries of British Columbia were quiet, but some summer cutting was about to commence. Forest fires were reported in some zones and though they would appear to be of minor proportions

they required the services of a number of workers in an endeavour to check them. Coal mining was slack. Though not many men were being taken on by the metal mines this industry continued to be active and some development work was proceeding. Railroad construction continued to afford employment to gangs in different parts of the province. Building construction remained fairly active, although no new large projects were reported as being started. Generally speaking, conditions in the Coast province showed no startling change from previous months and only appeared to reflect such an amelioration as is customary with the return to summer weather conditions.

EMPLOYERS' REPORTS. The trend of employment at the beginning of May continued to be favourable, the gains exceeding those recorded on the same date of last year and of 1923. The index number, however, was slightly lower than on May 1 of the two preceding years, although it was higher than in 1922 and 1921. The largest increases at the beginning of May, 1925, were in manufacturing and construction. Transportation, trade, communication, services and mining (exclusive of coal mining) also recorded improvement.

All provinces shared in the upward movement. In the Maritime Provinces, manufacturing establishments, especially fish canneries and lumber mills, showed increased employment, while construction and quarrying also recorded heightened activity. Transportation, on the other hand, reported reductions, largely owing to the re-opening of the St. Lawrence ports. In Quebec, there was on the whole a decidedly favourable movement, manufacturing, logging, transportation, construction and trade showing the greatest gains. The only large declines were in leather, boot and shoe factories. In Ontario, construction, manufacturing and transportation reported the most extensive increases, but there were also considerable additions to staffs in mining and trade. Further, though less extensive contractions took place in logging. The commencement of seasonal operations on railroad construction and maintenance caused important increases in the Prairie Provinces; improvement was also indicated in other branches of construction and in manufacturing and communication, while logging, coal mining and transportation registered the only large reductions. In British Columbia, manufacturing and construction reported marked gains, but logging camps continued to show seasonal declines.

Improvement was indicated in all the cities for which separate tabulations are made, except Quebec. In Montreal, fluctuations in manufacturing produced a net increase which, however, was exceeded by the expansion in transportation, construction and trade. In Quebec, there was a considerable falling off in employment in construction, and leather boot and shoe factories were also slacker. Shipping and stevedoring, on the other hand, reported seasonal improvement. In Ottawa, the most pronounced increases took place in construction, but there was also a moderately upward movement in manufactures and transportation. In Toronto, there were numerous but generally slight increases in manufacturing establishments; construction, transportation, and trade also reported heightened activity. In Hamilton, manufacturing continued to gain, the additions to staffs in rubber and iron and steel being most pronounced. Other industries showed a moderately favourable trend. In Winnipeg, building contractors registered greater activity and manufacturers were slightly busier. Trade, on the other hand, showed a falling off. In Vancouver, seasonal operations in lumber mills caused increases, which were supplemented by minor gains in other branches of manufacturing, and in trade. Transportation, however, afforded slightly less employment.

Further marked increases were reported in manufacturing; lumber mills and fish canneries showed the largest gains. Construction was very decidedly more active. Transportation, trade, communication, services and quarrying also employed many more workers than at the beginning of April. Leather boot and shoe factories and coal mining showed the most pronounced declines reported.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of May, 1925.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

A minor increase in unemployment was indicated at the end of April by the 1,500 local trade unions from which reports were received

with a membership of 154,738 persons; the percentage out of work stood at 8.7 at the close of April as compared with percentages of 8.5 and 5.1 for the months of March, 1925, and April, 1924, respectively. Garment workers in Quebec had an unusually slack season and were mainly responsible for the decline in that province, as compared with March. The Alberta coal mines also showed curtailment in operations due to lack of orders and more unemployment was reported in New Brunswick owing to depression in the steam railway division. In the remaining provinces a slightly higher level of employment was maintained than in March. In the manufacturing industries as a whole, there was a decline in the volume of work afforded, especially in the garment trade. In addition brewery workers showed considerable unemployment and reductions on a much smaller scale were reported by paper makers and hat, cap and glove workers. On the other hand, there was more activity among glass and cigar and tobacco workers, bakers and confectioners, metal polishers and wood workers. Leather and iron and steel workers showed some improvement and printing tradesmen and textile workers also were better employed. Organizations of coal miners in Nova Scotia which were not affected by the strike situation reported more favourable conditions though strike conditions still continued to affect the majority of the miners in the district. Employment in the Alberta mines showed a substantial falling off due to lessened demand for coal. In British Columbia no miners were reported out of work. Asbestos miners in Quebec were fully employed. Improvement continued to be registered in the building trades, 18.4 per cent of the members being out of work at the end of April as compared with 22.5 per cent in March. The situation was also rather better than in April of last year when 19.1 per cent of the members were reported idle. All tradesmen in the group with the exception of bricklayers, masons and plasterers, tile layers, lathers and roofers and hod carriers were more active than in March. In comparison with April of last year steam shovel and dredge-men, bridge and structural iron workers, carpenters and joiners, granite and stone cutters, painters, decorators and paperhangers and tile layers, lathers and roofers all reported more unemployment, which was more than counterbalanced by increased activity among bricklayers, masons and plasterers, plumbers and steamfitters and hod carriers and building labourers. The situation for electrical workers remained stationary. Reports received from 591 unions of transportation workers with a

membership of 56,104 persons showed that 4.7 per cent of the members were out of work as compared with 5.4 per cent in March. Navigation workers were slightly less fully engaged than in March, but the situation was more favourable for steam railway and street and electric railway employees. Workers in the transportation division were not so busy as in April of last year when 3.6 per cent of the members were idle, all groups showing slight reductions. Retail clerks were better employed than in March. Hotel and restaurant employees and theatre and stage employees were slacker, but more work was afforded barbers and stationary engineers and firemen. Fishermen showed improvement during April. Lumber workers and loggers reported a somewhat larger percentage of idleness.

EMPLOYMENT OFFICE REPORTS. During the month of April, 1925, the offices of the Employment Service of Canada made 33,544 references to positions and effected a total of 32,188 placements. The placements in casual employment during this period were 9,076, while those in regular work were 19,670 of men and 3,442 of women, a total of 23,112. Employers notified the service of 35,563 vacancies of which 25,683 were for men and 9,880 for women. The number of applications for work was 43,166; those from men were 32,819 and from women 10,347. A comparison of the reports for this period with those of the preceding month shows a considerable increase in the volume of business transacted, the weather being more favourable for expansion in industry. A slight increase is also shown in the work carried on in the offices of the Employment Service as compared with that of April, 1924.

PRODUCTION REPORT. The Dominion Bureau of Statistics reports that the production of pig iron in Canada in April was 60,065 long tons, a slight decline from the March output of 63,932 tons. In March the whole output consisted of basic iron, and in April this grade dropped 17 per cent to 52,851 tons; 2,899 tons of foundry iron and 4,315 tons of malleable iron were also produced. The cumulative output for the four months ending April was 181,805 tons, as compared with 285,155 tons produced during the same period of last year. Five furnaces were in blast at the end of April, located as follows: two at Sydney, Nova Scotia; two at Sault Ste. Marie, Ontario, and one at Hamilton, Ontario. The daily capacity of the active furnaces was 2,075 tons or about 41 per cent of the total daily capacity of the

15 furnaces now being carried on the Bureau's list. Ferro-alloys at 2,262 tons marked an increase of 15 per cent over the 1,962 tons of March, and consisted mainly of the grade composed of 80 per cent manganese, a small quantity of ferro-silicon also was produced.

In April the production of steel ingots and castings in Canada was 88,355 long tons, or about 18 per cent below the 107,605 tons of March. The output was composed of 86,472 tons of steel ingots and 1,883 tons of steel castings, all the ingots and 10 per cent of the castings being intended for the further use of the producing firms. For the four months ending April, the cumulative production was 260,307 tons, as compared with 311,386 tons for the same period of last year. This production was made up of 253,808 tons of steel ingots, and 6,499 tons of steel castings, a fall of 15 per cent and 51 per cent respectively from the 298,045 tons of ingots and 13,341 tons of castings produced during the same period last year.

The report from the Department's correspondent at Cobalt shows that seventeen cars, containing approximately 1,308,454 pounds of silver ore, were shipped from the Cobalt camp during the first twenty-nine days of May, as compared with 10 cars of silver ore, containing 807,570 pounds, in the previous month (the latter is a revised figure showing the shipments for the entire month, as against the shipments in eighteen days reported in the *MAY GAZETTE*). The Nipissing mine shipped 354 bars, containing 403,348.54 ounces of silver, and The Mining Corporation of Canada shipped 84 bars, containing 84,181.54 ounces of silver, making a total of 438 bars, containing 487,530.08 ounces of silver, shipped during the month of May, as compared with 456 bars, containing 499,434.49 ounces, shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of April, 1925: Intercolonial Coal Company, Limited, Westville, 20,176 long tons; the Greenwood Coal Company, Limited, 5,908 tons. As complete figures showing the coal production in Canada for April are not yet available, the statistics for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch shows that 652,396,468 feet of timber, board measure, were scaled in the province during April, 1925. The total includes 321,886,767 feet of fir; 160,686,160 feet of cedar; 43,482,218 feet of spruce; 81,270,856 feet of hemlock; 15,337,233 feet of balsam; 5,313,653 feet of yellow pine; 8,502,964 feet of white

pine; 3,113,056 feet of jack pine; 11,741,497 feet of larch, and miscellaneous species, 1,062,064 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$17,656,889 during April, 1925, as compared with \$18,233,944 in the previous month and \$19,051,093 in April, 1924.

The gross earnings of the Canadian Pacific Railway are given in a preliminary statement as \$12,608,789 for April, 1925, as compared with \$12,931,547 for March and \$13,806,122 for April, 1924.

Coal Statistics for March.—There was a reduction of 32 per cent in the output of coal from Canadian mines during the month of March as compared with the month of February, the total output amounting to 786,389 tons, as against 1,156,902 tons in February. Compared with the average for the month during the five preceding years, there was a decrease of 44 per cent, or 609,049 tons. The reduction in output was due largely to the strike in Nova Scotia and to lack of orders. The production in March by provinces when compared with the five-year average for the same month, showed a decrease in all the coal-producing provinces.

The total number of men employed in the coal mines of Canada during March was 24,477, of whom 18,452 worked underground and 6,025 on the surface, as compared with a total of 29,449 in February, of whom 22,830 worked underground and 6,619 on the surface. The production per man in March was 32.1 tons as against 39.3 tons per man in February; but during March the production per man-day was 2.3 tons, as compared with 2.5 tons in February.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in April in sixty cities throughout Canada showed a substantial increase of 77.9 per cent over March, 1925. There was also a gain of 12.1 per cent over the value of the permits issued in April, 1924. The total for April, 1925, was \$15,042,519; for March, 1925, \$8,457,791; and for April, 1924, \$13,422,456.

For the month of May, 1925, the total Canadian construction awards, as compiled by MacLean Building Reports, Limited, were \$34,052,100, as compared with \$24,886,900 in the previous month and \$32,996,900 in May, 1924. Residential building accounted for 38.2 per cent of the May total and amounted to

\$13,020,400. Business building totalled \$11,752,200, or 34.5 per cent; industrial building, \$3,259,500, or 9.6 per cent; and public works and utilities, \$6,020,000, or 17.7 per cent. The activity was distributed among the provinces as follows: Ontario, 50.9 per cent; Quebec, 35.4 per cent; Prairie Provinces, 7.1 per cent; British Columbia, 4.8 per cent; and the Maritime Provinces, 1.8 per cent.

FOREIGN TRADE.

The summary of Canadian trade prepared by the Department of Customs and

Excise shows that in April, 1925, the merchandise entered for consumption amounted to \$59,104,651, as against \$60,173,141, in April, 1924. The domestic merchandise exported amounted to \$59,909,377 in April, 1925, as compared with \$94,815,802 in March and \$48,880,914 in April, 1924. Foreign merchandise exported amounted to \$799,173 in April, 1925, and \$637,530 in April, 1924. The chief imports in April, 1925, were: fibres, textiles and textile products, \$13,167,792; iron and its products, \$13,060,590; agricultural and vegetable products, mainly foods, \$7,195,689; non-metallic minerals and products, \$6,841,593; agricultural and vegetable products, other than foods, \$4,831,825.

The chief exports in the same month were in agricultural and vegetable products, mainly foods, \$18,456,283; wood, wood products and paper, \$15,948,462; animals and animal products, \$8,071,725; non-ferrous metals and their products, \$5,810,665.

Strikes and Lockouts

The time loss due to industrial disputes was greater in May than in April, 1925, or May, 1924. There were in existence during the month 15 disputes, involving 12,975 employees, and resulting in a time loss of 299,369 working days, as compared with 12 disputes in April, involving 11,951 workpeople and resulting in a time loss of 290,633 working days. In May, 1924, there were recorded 14 disputes involving 7,955 employees and resulting in a time loss of 202,710 working days. Seven new strikes and lockouts commenced during May with a time loss of 7,005 working days. Two of the strikes and lockouts commencing prior to May, and four of the strikes and lockouts commencing during May terminated during the month. At the end of the month, therefore, there were nine strikes and lockouts on record affecting 11,743 workpeople, not including these strikes and lockouts in which employment conditions were

reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices were again slightly lower due partly to seasonal changes. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.48 at the beginning of May as compared with \$10.56 for April; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. Eggs were again substantially lower while there were less important declines in the prices of potatoes, milk, flour, rolled oats and sugar. Increases occurred in the prices of beef, fresh and salt pork, mutton, bacon and lard. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.73 at the beginning of May as compared with \$20.82 for April; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was slightly lower. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics advanced to 159.1 for May as compared with 156.5 for April; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); and 201.4 for May, 1919. In the grouping according to chief component material three of the eight main groups were higher, three were lower while two were practically unchanged. The higher level for the index number was due almost entirely to the movement in the Vegetables and Their Products group which advanced substantially because of higher prices for grains, flour and other milled products, fruits and rubber. The Non-Ferrous Metals group and the Non-Metallic Minerals group both were somewhat higher, the former mainly because of higher prices for copper, silver and tin and the latter because of increases in the prices of lime and anthracite coal. The groups which declined were: Animals and Their Products because of seasonal declines in the prices of milk, cheese and eggs; Fibres, Textiles and Textile Products because of lower prices for cotton, wool, flax fibre and jute; Iron and Its Products because of declines in pig iron and steel sheets. The Wood and Wood Products group and the Chemicals and Allied Products group were steady.

ACT AMENDING THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, ADOPTED BY PARLIAMENT

REFERENCE was made in the March, 1925, issue of the *LABOUR GAZETTE* to the introduction in the House of Commons by the Minister of Labour of a bill to amend the Industrial Disputes Investigation Act, 1907. The necessity for this legislation arose out of the recent judgment of the Judicial Committee of the Privy Council declaring the Act of 1907 to be *ultra vires* of the Parliament of Canada. It was mentioned in the May issue of the *LABOUR GAZETTE* that the bill in question completed its passage through the House of Commons on May 13; and that during the consideration of the bill by the House of Commons, three clauses were added to the amending bill as originally passed. These clauses were to the effect that employers and employees would be required to give at least thirty days' notice of an intended or desired change affecting wages and working hours, and that, in case of dispute arising, it would be unlawful to declare a strike or lockout until a board under the Act had dealt with the dispute. Another change provided that an employer declaring a lockout or making effective a change in wages contrary to the provisions of the Act, would be liable to a fine of not less than \$100 and not more than \$1,000 for each day the lockout exists.

An amendment was also made to paragraph 2 of Section 15 of the Act, as enacted by Section 2 of Chapter 29 of the Statutes of 1910, in order to permit of the establishment of a Board of Conciliation and Investigation where it has been certified by statutory declaration that it is found impossible to secure a conference between the employees' committee and the employer, or to enter into negotiations.

The bill passed its second reading in the Senate on May 19. It was considered in committee on May 27, and passed its third reading on the following day without amendment. The bill as amended in the House of Commons and adopted by the Senate is in the terms following:—

AN ACT TO AMEND THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

1. The Industrial Disputes Investigation Act, 1907, is amended by inserting after section two thereof the following:—

APPLICATION OF ACT

2a. This Act shall apply to the following disputes only:—

(i) Any dispute in relation to employment upon or in connection with any work, undertaking or business which is within the legislative authority of the Par-

liament of Canada, including but not so as to restrict the generality of the foregoing:—

- (a) works, undertakings or business operated or carried on for or in connection with navigation and shipping, whether inland or maritime;
- (b) lines of steam or other ships, railways, canals, telegraphs and other works and undertakings connecting any province with any other or others of the provinces, or extending beyond the limits of the province;
- (c) lines of steamships between a province and any British or foreign country;
- (d) ferries between any province and any British or foreign country, or between two provinces;
- (e) works, undertakings or business belonging to, carried on or operated by aliens, including foreign corporations immigrating into Canada to carry on business;
- (f) such works as, although wholly situate within the province, have been or may be declared by the Parliament of Canada to be for the general advantage of Canada, or for the advantage of two or more of the provinces;
- (g) works, undertakings or business of any company or corporation incorporated by or under the authority of the Parliament of Canada.

(ii) Any dispute which is not within the exclusive legislative authority of any provincial legislature to regulate in the manner provided by this Act.

(iii) Any dispute which the Governor in Council may by reason of any real or apprehended national emergency declare to be subject to the provisions of this Act.

(iv) Any dispute which is within the exclusive legislative jurisdiction of any province and which by the legislation of the province is made subject to the provisions of this Act.

"2a. The provisions of this Act shall be construed as relating only to the application of The Industrial Disputes Investigation Act, 1907, and not so as to extend the meaning of the word "employer" as defined by section two, paragraph (c) of the said Act."

2. Subparagraph (b) of paragraph two of section fifteen of The Industrial Disputes Investigation Act, 1907, as enacted by section two of chapter twenty-nine of the statutes of 1910, is repealed, and the following is substituted therefor:—

"(b) A statutory declaration setting forth that, failing an adjustment of the dispute or a reference thereof by the Minister to a Board, to the best of the knowledge and belief of the declarant a lockout or strike will be declared, and (except where the application is made by an employer, in consequence of an intended change in wages or hours proposed by the said employer) that the necessary authority to declare such lockout or strike has been obtained; or, where a dispute directly affects employees in more than one province and such employees are members of a trade union having a general committee authorized to carry on negotiations in disputes between employers and employees and so recognized by the employer, a statutory declaration by the chairman or president and by the secretary of such committee setting forth that, failing an adjustment of the dispute or a reference thereof by the Minister to a Board, to the best of the knowledge and belief of the declarants a strike will be declared, that the dispute has been the subject of negotiations between the committee of the employees and the employer, or that it has been impossible to secure conference or to enter into negotiations, that all efforts to obtain a

satisfactory settlement have failed, and that there is no reasonable hope of securing a settlement by further effort or negotiations."

3. Section fifty-seven of the said Act, as amended by section five of chapter twenty-nine of the statutes of 1910, and as further amended by section five of chapter twenty-nine of the statutes of 1920, is repealed, and the following is substituted therefor:—

"57. Employers and employees shall give at least thirty days' notice of an intended or desired change affecting conditions of employment with respect to wages or hours; and in the event of such intended or desired change resulting in a dispute, it shall be unlawful for the employer to make effective a proposed change in wages or hours or for the employees to go on strike, until the dispute has been finally dealt with by a Board, and a copy of its report has been delivered through the Registrar to both the parties affected; the application for the appointment of a Board shall be made by the employers or employees proposing the change in wages or in hours; neither of those parties shall alter the conditions of

employment with respect to wages or hours, or on account of the dispute do or be concerned in doing directly or indirectly, anything in the nature of a lockout or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute; but if, in the opinion of the Board, either party uses this or any other provision of this Act for the purpose of unjustly maintaining a given condition of affairs through delay, and the Board so reports to the Minister, such party shall be guilty of an offence, and liable to the same penalties as are imposed for a violation of the next preceding section."

4. Section fifty-eight of the said Act is repealed, and the following is substituted therefor:—

"58. Any employer declaring or causing a lockout or making effective a change in wages or hours contrary to the provisions of this Act shall be liable to a fine of not less than one hundred dollars, nor more than one thousand dollars for each day or part of a day that such lockout or change exists."

STRIKES AND LOCKOUTS IN CANADA DURING MAY, 1925

THE number of strikes and lockouts in existence during May was fifteen, as compared with twelve during April. The time loss for the month was greater than in May, 1924, being 299,359 working days, as compared with 202,710 working days in the same month last year. The considerable time loss and number of employees in May, 1925, was chiefly due to a dispute in the coal mining industry in Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
May, 1925.....	15	12,975	299,369
April, 1925.....	12	11,951	290,633
May, 1924.....	14	7,955	202,710

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 11,764 workpeople, were carried over from April. Two of the strikes and lockouts commencing prior to May, and four of the strikes and lockouts commencing during May terminated during the month. At the end of May, therefore, there were on record nine strikes and lockouts

as follows: coal miners, Nova Scotia; cigar-makers at Montreal; clothing workers at Toronto; hat and cap makers at Toronto; fur workers at Montreal; paper makers at Fort William; moulders at Owen Sound, and trunk makers at Montreal. The record does not include minor disputes as described in the previous paragraph, nor does it include any dispute which the union or organization concerned has not yet called off, although information has been received indicating that employment conditions are no longer affected thereby. Information is available as to six such disputes, namely, clothing workers (ladies' garment makers), Toronto, commencing February 5; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925, and street railway employees at St John, June 29, 1921.

Information was received in the Department during May that an adjustment in the wage scale in coal mines at Coalhurst, Alberta, on April 3, resulted in a lockout. Negotiations at Cumberland, B.C., for a similar purpose occurred. These cases are discussed in a special article on wage changes for coal miners in Western Canada, appearing elsewhere in this issue of the LABOUR GAZETTE. A stoppage of work for forty-five minutes at Hamilton, Ont., on May 21, involved 40 printing compositors in two establishments during negotiations as to a new wage scale, it being agreed to refer the question to arbitration. A cessation of work which lasted four hours and affected about seven waitresses in a restaurant at Port Arthur during May

was reported. The dispute arose over the duties of one of the waitresses and all returned to work.

Of the disputes which began during May, two were for increased wages, two more were against reduction in wages, one was for increased wages and other changes, one for recognition of the union, and the seventh concerned other union questions. Of the strikes and lockouts which terminated during May, one was in favour of the employees, one in favour of employers, and four ended in a compromise being effected or strikers being partially successful.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

FISHERMEN (SALMON), NEW WESTMINSTER AND VICINITY.—A strike occurred on May 11, of 630 fishermen in the employ of about 75 firms, because the price to fishermen on the Fraser River for red spring salmon was cut from 13 cents per pound to eight cents per pound. The fishermen proposed that the price be fixed at ten cents per pound. After being on strike six days, the men returned to work, accepting nine cents per pound for the month of May and eight cents per pound for the month of June. Work was resumed May 18.

COAL MINERS, NOVA SCOTIA.—The dispute of coal miners in Nova Scotia affecting some 11,000 coal miners was carried over from the previous month's record and remained unsettled at the end of May. On May 6, picketing was commenced at most of the collieries, and it was reported at some points the pickets succeeded in holding up maintenance work for a time. On May 7 the first act of violence during the dispute was reported at Glace Bay when one of the company's officials suffered injuries from a rock, alleged to be thrown by one of the pickets, who was arrested and released on \$1,000 bail. By May 9 most of the pickets had been withdrawn. On May 13 a move was made to invoke the power of the Industrial Peace Act,* in order to end the situation. At a meeting of the Glace Bay Town Council a motion to hold a special meeting to discuss the advisability of applying for a Board of Arbitration under Part I of the Act was lost on the casting vote of the Mayor. On May 15, damage to pumps was reported in some localities. On May 18, the Premier of Nova Scotia again visited Sydney and other places affected by the dispute, at the request of one of the

members of the Dominion Parliament. On May 21, a district convention was held by the United Mine Workers of America, which lasted several days. The proceedings were not published but it was reported that questions such as increased strike benefits, policy of picketing, etc., were discussed, and the executive was authorized to raise funds by subscription, and to borrow \$100,000. It was decided to send speakers to the other provinces to raise the desired funds.

Early in June, in connection with closer picketing, disturbances occurred, following which the militia was requisitioned by the county judge with the approval of the Provincial Attorney-General, as required by the Militia Act, as amended in 1924. On June 14 the Minister of Labour left Ottawa for Nova Scotia, by request.

CLOTHING WORKERS, TORONTO, ONTARIO.—On May 18, 75 clothing workers went on strike owing to the employer refusing to recognize the union. This strike remain unsettled at the end of May.

BOOT FACTORY EMPLOYEES, MONTREAL, QUEBEC.—The strike of seven boot factory employees which began on February 26, against a reduction in wages (reported in the May issue of the LABOUR GAZETTE as having lapsed at the end of April), was called off by the union on May 4, after negotiations had been carried on and a re-adjustment in wages had been granted to the workers.

FUR WORKERS, MONTREAL, QUEBEC.—In the last issue of the LABOUR GAZETTE mention was made of a strike of 75 fur workers on April 1, following the refusal of the employers to renew the wage agreement which expired January 31, or to sign a new agreement which involved an increase of 15 per cent in wages. On May 27, a general strike was declared among the fur workers which greatly augmented the number on strike, but at the end of May no information was obtainable as to the exact number involved. These late strikers were reported to be demanding a minimum wage of \$40 per week, a minimum apprenticeship of one year and pay for Dominion holidays.

PAPER MAKERS, FORT WILLIAM, ONTARIO.—On May 20, a strike involving some 32 paper-makers was declared at Fort William, the employer refusing to renew the agreement unless a clause permitting the management to have a skilled man go over machines on Sunday preparatory to starting work on Monday morning was inserted. When the papermakers ceased work the plant was closed down, and 200 other employees were thus indirectly involved. This strike remained unsettled at the end of May.

* This Act, which was passed late in the recent session of the provincial Legislature was outlined in the last issue of the GAZETTE.

STRIKES AND LOCKOUTS DURING MAY, 1925

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to May, 1925.			
MINING, NON-FERROUS, SMELTING AND QUARRYING—			
Coal miners, Nova Scotia.....	11,463	286,575	Commenced March 6; failure to agree on certain changes of wages and working conditions, and stoppage of credit at company's stores. Underminated.
MANUFACTURING—			
<i>Tobacco and liquors:</i>			
Cigarmakers, Montreal, Que..	5	125	Commenced March 24, against a reduction in wages. Underminated.
<i>Clothing, including knitted goods:</i>			
Hat and cap makers, Toronto, Ont.	8	200	Commenced March 3, for changes in working conditions. Underminated.
<i>Boots and shoes (other than rubber and felt):</i>			
Boot factory employees, Montreal, Que.	7	14	Commenced February 26, for increased wages. Settled by negotiations and work resumed May 4; compromise.
<i>Fur and leather products (other than boots and shoes):</i>			
Fur workers, Montreal, Que..	75 (a)	1,875	Commenced April 1, failure to agree on certain changes in agreements and on proposed substitution of separate agreements. Underminated.
Fur workers, Toronto, Ont....	16	400	Commenced February 20, for recognition of the union. Underminated.
<i>Wood products:</i>			
Carpenters, joiners and machine operators, Montreal, Que.	175	2,800	Commenced April 24, against a reduction in wages. Work resumed May 18, at reduced rate of wages.
<i>Iron, steel and products:</i>			
Moulders, Owen Sound, Ont..	15	375	Commenced January 19, against a reduction in wages. Underminated.
(b) Strikes and lockouts commencing during May, 1925.			
FISHING AND TRAPPING—			
Fishermen (salmon), New Westminster and Vicinity, B.C.	630	3,780	Commenced May 11, against a reduction in wages. Settled by negotiations and work resumed May 18; compromise.
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Clothing workers, Toronto, Ont.	75	825	Commenced May 18, for recognition of the union. Underminated.
<i>Pulp and paper products:</i>			
Papermakers, Fort William, Ont.	32	272	Commenced May 20; for renewal of agreement without changes in working conditions. Underminated.
<i>Miscellaneous:</i>			
Trunk makers, Montreal, Que.	54	378	Commenced May 22, against a reduction in wages. Underminated.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Carpenters, Vancouver, B.C..	185	1,480	Commenced May 1, for a minimum rate of \$7 per day. Settled by negotiations; work resumed May 11; compromise.
<i>Railway construction:</i>			
Tracklayers, Port Hope to Belleville, Ont.	200	200	Commenced May 20, for increased wages and other changes. Work resumed May 21; compromise.
TRANSPORTATION AND PUBLIC UTILITIES—			
<i>Water transportation:</i>			
Seamen, Vancouver, B.C.....	35	70	Commenced May 7, to obtain bonus which had not been paid. Settled by negotiations; work resumed May 9.

(a) Others, number not reported, ceased work May 27, 1925.

TRUNK MAKERS, MONTREAL, QUEBEC.—On May 22, 54 trunk makers went on strike against a ten per cent reduction in wages, and the strike was still in existence at the end of May.

WOOD WORKERS, MONTREAL, QUEBEC.—The strike of 175 carpenters, joiners and machine operators in a sash and door factory which commenced April 24, against a reduction in wages of from 10 to 15 per cent, terminated May 18, when the strikers returned to work at the reduced wage scale.

CARPENTERS, VANCOUVER, BRITISH COLUMBIA.—A strike of 185 carpenters occurred at Vancouver on May 1, to establish a minimum rate of 87½ cents per hour. Several contractors had been paying 81½ cents per hour, and some 87½ cents per hour. After negotiations work was resumed May 11, at 87½ cents per hour for most of the men working.

TRACKLAYERS, PORT HOPE TO BELLEVILLE, ONTARIO.—A cessation of work on one day,

May 20, was reported in the press, involving some 200 tracklayers for increased wages and changes in working conditions. The rate being paid was 25 cents per hour, and the men demanded 30 cents per hour. They had also been charged for blankets as well as \$1 per day for board. Negotiations were carried on with the result that 125 returned to work May 21, while the remaining 75 left the locality. The men resumed work on the understanding that the money deducted for blankets would be refunded.

STEAMSHIP CREW, VANCOUVER, BRITISH COLUMBIA.—A dispute involving some 45 engine room and deck hand employees on a steamship at Vancouver occurred on May 7. The complaint was that a bonus which the men usually received was not paid. A crew was secured for a short voyage and after some negotiations the bonus was paid and the seamen returned to work on May 9.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING APRIL

THE British *Ministry of Labour Gazette* for May contains the following table which analyses the disputes in progress in April, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in March			Number of workpeople involved in all disputes in progress in April	Aggregate duration in working days of all disputes in progress in April
	Started before Apr. 1	Started in Apr.	Total		
Mining and quarrying.....	6	10	16	8,000	62,000
Metal, engineering and shipbuilding.....	5	4	9	2,000	9,000
Textile.....	4	9	13	1,000	7,000
Food, drink and tobacco.....		3	3	2,000	8,000
Other.....	11	18	29	12,000	36,000
Total, April, 1925.	26	44	70	25,000	122,000
Total, March, 1925	25	55	80	44,000	161,000
Total, April, 1924.	21	46	67	51,000*	471,000*

Of the 44 disputes beginning in April, 19, directly involving 3,000 workpeople, arose out of demands for advances in wages; 15, directly involving 5,000 workpeople, on other wages questions; 3, directly involving 1,000 workpeople, on details of working arrangements; 4, directly involving 2,000 workpeople, on questions of trade union principle; and 5, directly involving 200 workpeople, on other questions. In addition, about 13,000 workpeople were involved, either directly or indirectly, in 26 disputes which began before April and were still in progress at the beginning of that month. The number of new and old disputes was thus 70, involving about 25,000 workpeople, and resulting in a loss during April of about 122,000 working days.

Settlements were effected in the case of 23 new disputes, directly involving 5,000 workpeople, and 11 old disputes, directly involving 2,000 workpeople. Of these new and old disputes, 7, directly involving 2,000 workpeople, were settled in favour of the workpeople; 15, directly involving 2,000 workpeople, in favour of the employers; and 12, directly involving 3,000 workpeople were compromised. In the case of 4 disputes, directly involving about 10,000 workpeople, work was resumed pending negotiations.

*A dispute involving about 27,000 shipyard workers in the Federated districts of Great Britain accounted for more than half of the time lost in April, 1924.

COMBINES INVESTIGATION ACT, 1923

Report of Registrar on Investigation of Alleged Combine Operating to Limit Competition in Connection with the Marketing of the New Brunswick Potato Crop

THE Minister of Labour published early in June an interim report of the Registrar under the Combines Investigation Act, who is investigating a combine alleged to exist amongst potato dealers in New Brunswick, resulting in the limitation of competition in the buying, transporting and sale of potatoes.

A formal complaint, signed by six residents of New Brunswick complaining of a combine, resulted in the Registrar being instructed by the Minister of Labour to carry out an investigation (LABOUR GAZETTE, January, 1925, page 1).

The report is a volume of 144 pages containing details of the evidence taken in the course of the investigation, and is divided into sections of which the principal are as follows: Production and Producers; Co-operative Shipping; Export Trade with Cuba; Existence of a Combine; Arrangements with Cuban Buyers in Havana; The Struggle for Business in Cuba; Arrangements with Steamship Companies (including Profit Taking on Freight Overages; Unfair Competition; The New Brunswick Potato Exchange; Frost-Proof Warehouses at Saint John.

In the opinion of the Registrar, the evidence establishes the fact of the existence of various agreements, arrangements and combinations at different times, fixing a common price and preventing and lessening competition in and substantially controlling the transportation, purchase, sale and storage and otherwise restraining or injuring trade or commerce in potatoes, to the detriment, or against the interest, of the public, and that these arrangements were made between the various shipping groups known as the Porter group and the McCain group, and between the Porter group and the Munson Steamship Line, of 67 Wall Street, New York City, including their agents, Furness-Withy & Co., Ltd., Steamship Brokers, Saint John, N.B., and between the Porter group and O. R. Estey of Woodstock, N.B.

The personnel of the groups referred to above is as follows:—

Porter Group—

Guy G. Porter, Ltd., Perth, N.B.
 Hatfield & Co., Ltd., Hartland, N.B.
 C. E. Gallagher Co., Bath, N.B.
 B. Frank Smith, East Florenceville, N.B.
 Nelles & Clark, Woodstock, N.B.
 Johnston & Turbill, Woodstock, N.B.

McCain Group—

McCain Produce Co., Ltd., East Florenceville, N.B.
 Noddin & Schriver, Woodstock, N.B.
 Chipman Phillips, Woodstock, N.B.
 Henry Phillips, Woodstock, N.B.
 Wilson, Patterson & Gifford, Saint John, N.B.

The part in the arrangements outlined above, that was played by the McCain group, was a lesser one than that of the Porter group. They were, in the first instance, co-operating in the chartering of vessels; but were forced by the Porter group into agreements with that group, which affected selling prices in Cuba, and prices paid to the farmer in New Brunswick.

The report refers to the necessity for some better method of handling potatoes, and points out that if the farmer is to receive a larger proportion of the consumer's dollar, he must pay more attention to marketing methods, and that any organization set up for the marketing of the potato crop to take the place of the present system, should be owned and controlled by the grower.

The report closes with the following comment:—

"Perhaps the most important aspect of this investigation is the opportunity of throwing light on certain transactions for the information of the farmer and the public generally. In the past the inside of these transactions has not been known except to the big men of the trade themselves."

Peter J. Hughes, K.C., of Fredericton, N.B., conducted the enquiry before the Registrar.

A deputation of male teachers waited upon the Central Board of the Catholic School Commission, at Montreal, recently, asking that the collective insurance scheme accepted by the Board some time ago should be begun. A high percentage of the teachers coming under the Board have applied for the insurance. The project entails the paying by the Board of 30 per cent of the premiums and by the teachers of 70 per cent. The Board stated that the scheme would probably be opened on July 1.

REFERENCE TO SUPREME COURT OF CANADA REGARDING THE EIGHT-HOUR DAY CONVENTION OF THE INTERNATIONAL LABOUR CONFERENCE

AN article appeared in the January, 1925, issue of the *LABOUR GAZETTE*, concerning a reference which had been made by Order-in-Council of the Dominion Government to the Supreme Court of Canada of certain questions as to the obligations of Canada arising under the labour part of the Treaties of Peace, and also as to the legislative authority of the Dominion Parliament, or of the Provincial Legislatures, to deal with a certain Draft Convention adopted by the International Labour Conference in 1919, limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week.

The hearing of this reference occurred in the Supreme Court on June 11. Counsel appeared on behalf of the Dominion Government, and also on behalf of the Provincial Governments of Quebec, Ontario and Nova Scotia. All the provinces had been notified of the intended reference but only those mentioned were represented at the hearing.

On conclusion of the arguments, judgment was reserved by the Court.

This subject was considered by a Committee of the House of Commons last session, and it was under the authority of a resolution of the House of Commons and of the Supreme Court Act that the reference was made. The questions submitted to the court were as follows:

(1) What is the nature of the obligation of the Dominion of Canada as a member of the International Labour Conference, under the provisions of the Labour Part (Part XIII) of the Treaty of Versailles and of the corresponding provisions of the other Treaties of Peace, with relation to such draft conventions and recommendations as may from time to time be adopted by the said Conference under the authority of and pursuant to the aforesaid provisions?

(2) Are the legislatures of the provinces the authorities within whose competence the subject-matter of the said draft convention in whole or in part lies and before whom such draft convention should be brought, under the provisions of Article 405 of the Treaty of Peace with Germany, for the enactment of legislation or other action?

(3) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the legislatures?

(4) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the Parliament of Canada?

It was contended on behalf of the Dominion Government by Eugene Lafleur, K.C., of Montreal, and J. G. O'Donoghue, K.C., of Toronto, that no obligation rested on the Dominion to enact into law the different draft conventions or recommendations which

may be adopted from time to time by the International Labour Conference, and that the obligation of the Federal Government was satisfied if the different recommendations or conventions were brought before the competent authority, Dominion or Provincial, as the case may be. In regard to the eight-hour day convention, adopted by the International Labour Conference in 1919, an Order-in-Council was passed in November, 1920, on the advice of the then Minister of Justice, declaring that the proposals contained therein were within provincial jurisdiction excepting as to Dominion works and undertakings. The Convention in question was considered at a conference between representatives of Dominion and Provincial Governments three years later. Doubt was expressed by some of the provincial representatives in attendance at this conference as to the soundness of the view expressed in the Federal Order-in-Council of November, 1920. The Supreme Court reference is intended to secure an authoritative expression of view as to whether the eight-hour day convention referred to is within the Federal or Provincial sphere of control. The argument of Mr. Lafleur supported the position which was taken by the Hon. C. J. Doherty, former Minister of Justice, in the Order in Council of 1920.

Mr. Geoffrion, K.C., of Montreal, on behalf of the Attorney General of the Province of Quebec, supported the view of the Dominion Government that the regulation of hours of labour was exclusively within provincial control under the British North America Act as affecting directly the civil rights of both employers and workmen.

Edward Bayly, K.C., appearing for the Attorney General of Ontario, argued that the Dominion Parliament has exclusive power to sanction ratification of the draft convention of the International Labour Conference, and that if a draft convention is formally ratified, thereupon becoming binding upon the Dominion, a further obligation will rest upon the Dominion authorities to take whatever action is necessary to make its provisions effective. In the absence of ratification of the eight-hour day convention by the Federal authorities, it was contended on behalf of the Province of Ontario that its subject-matter is probably within provincial legislative control.

Mr. Mathers, K.C., appearing for the Attorney-General of Nova Scotia, supported the Ontario Government in the view that the responsibility in regard to the eight-hour day convention rested upon the Federal authorities.

RECENT LABOUR LEGISLATION IN CANADA

Outline of Measures enacted in 1925 in Quebec, Ontario and Alberta

Quebec

The second session of the sixteenth legislature of the Province of Quebec opened on January 7 and concluded on April 3, 1925, many acts being passed, of which several particularly affected labour.

Workmen's Compensation.—The report of the Commission appointed at the second session of 1922 (chapter 38) to inquire into the subject of workmen's compensation for industrial accidents, was laid before the legislature early in the session. (The report was outlined in the February issue of the *LABOUR GAZETTE*). No action was taken to give effect to these recommendations, but the Minister of Labour stated that the Government was considering the various suggestions in the report, and that they proposed to wait until after the next International Labour Conference at Geneva before modifying the present legislation, if it should be expedient to do so. (The subject of Workmen's Compensation occupies the first place in the agenda of this Conference).

An amendment was made by the insertion in the existing act of a new subsection providing that workmen who are the victims of accidents happening outside Quebec while working for an employer who is domiciled outside the Province, shall not participate in the benefits provided by the Quebec act, if the country or province in which the accident occurs entitles the workman or his representatives to compensation, and if the employer has fulfilled his obligations under such a law. The amendment is directed against the possibility that the workman in such a case should receive a double indemnity.

An appropriation was made by the legislature for the education in the elementary schools of the children of workmen who have died as the result of injuries sustained in the course of their occupation. In announcing the government's policy in this matter, Premier Taschereau said:—

It is true that the law governing industrial accidents provides an indemnity to the worker in case of accident and to his widow and children if the accident results in death; but we must consider the education of the children and we intend accordingly to ask the House to vote a sum for the purpose of furnishing education in primary schools for the sons of the worker killed in the course of his employment. The employer provides them with bread; we will supply them with the food of intelligence. It is a new measure in which we have taken the initial step. I trust it will be appreciated by the labouring class, and that later the sons of workers will be proud of a province which has taken the trouble to

assure them such an education as their fathers would have desired them to have.

Minimum Wages for Women.—The Women's Minimum Wage Act of 1919, was amended so as to permit the remuneration of the members of the Minimum Wage Commission, who are to receive an amount to be fixed by the Lieutenant Governor in Council for their services. The Women's Minimum Wage Act, which became law in 1919 (chapter 10) provides that the Lieutenant Governor in Council may appoint, under the direction of the Minister of Public Works, a minimum wage commission consisting of three members, none of the members to receive remuneration. The commission had not been appointed as the session closed. (An outline of the act was given in a note in the February issue of this *GAZETTE*).

Weekly Rest For Hotel Employees.—The one day of rest each week which was provided by an act of 1918 (chapter 53) for hotel and restaurant employees was amended so as to make it clear that the day of rest is to be a complete period of twenty-four hours.

Pensions of School Teachers.—The existing law relating to public instruction was amended to provide that no primary school teacher on the retired list after January 1, 1924, shall receive a pension less than \$125; and that the pension of every teacher on the list after that date, if under \$300 shall be increased by \$5 multiplied by the number of years, over 20 and under 35, which the teacher has served, provided that no pension shall exceed \$300.

Electrical Inspection.—The existing act respecting the protection of public buildings against fire was amended by a new provision fixing the rate of charges for examination of new electrical installations in public buildings at one half of one per cent of the value of the installation, and by providing for the appointment of a special staff of inspectors in the Department of Inspection of Industrial Establishments and Public Buildings at a salary not to exceed \$1,800 a year. The electrical inspectors are to be qualified journeymen electricians and besides these there will be other special inspectors qualified to judge heating systems of high and low pressure as well as sectional hot water boilers.

Provincial Civil Service.—An act was passed enabling the Lieutenant Governor in Council to prescribe such classification and remuneration as he shall deem just for the public officers and employees of the Province, subject

however to the approval of the legislature. In the discussion on this bill the Premier stated that the Government had not had sufficient time to study thoroughly the report of a special commission of deputy ministers who had been engaged in the study of reclassification. He pointed out that the Government paid its employees each year in pensions \$100,000, of which the employees contributed only \$39,000, and in addition paid for a group insurance policy on all employees.

Co-operative Societies.—The existing act governing co-operative societies (Revised Statutes, 1909, article 6763 sqq.) was amended to provide for an annual inspection of all the operations of a society by the Board of Supervision of Co-operative Societies. In connection with this act a member of the government stated that government control of co-operative societies might become necessary if they carry on a large banking business.

Licensing of Peddlers.—The Peddlers' Act of 1924 was amended by the inclusion among those not requiring licenses under the act of persons selling lubricating oils and gasoline.

Miscellaneous Acts.—"The Order of Agricultural Merit of the Province of Quebec" was instituted for the purpose of encouraging agriculturalists by honours and rewards, and to acknowledge services rendered to agriculture.

The charter of the City of Quebec was amended to permit the council to pass a by-law for the closing of barber shops at 8 o'clock p.m. during the week and 11 o'clock on Saturday.

Ontario

The second meeting of the sixteenth legislature of Ontario opened on February 10, and concluded on April 14.

Unemployment Relief.—The opening speech from the Throne announced that the government proposed, in view of the extent of unemployment, that the province should pay a proportion of the cost of works undertaken by municipalities for relief purposes, and that public undertakings should be continued, as far as possible, during the winter season. In accordance with this announcement the Unemployment Special Rate Act was passed enabling the council of any municipality during the year 1925 to levy, in addition to all other rates, a special rate not exceeding one mill in the dollar on the whole rateable property in the municipality, for the purpose of meeting the cost of any work or service undertaken for the express purpose of providing work for those out of employment. This special rate is not to be counted in ascertaining whether

the limit of taxation as fixed by the Municipal Act has been reached.

Garnishment of Wages.—The Wages Act was amended to provide that when the primary creditor garnishees wages he is to serve the garnishee with a statement whether or not he intends to apply for a reduction in the 70 per cent exemption of the amount of wages which is exempt from seizure or attachment under another section of the act; failing such notice the employer of the workman may pay into court only the balance of the wages after 70 per cent has been deducted. Either party however is permitted to apply to a judge for an order fixing the amount of the debtor's exemption.

Workmen's Compensation.—Two amendments were made in the Workmen's Compensation Act. The first enabled the Board to withhold the payment of benefits to widows who are found to be living an irregular life. In such cases compensation may be retained or diverted in whole or in part and paid for the benefit of any other dependents of the deceased workman.

The second amendment related to compensation in connection with accidents happening outside the province, being similar to an amendment to the Quebec act which is mentioned in the preceding section of this article. By this amendment no compensation is payable when an accident occurs outside the province and the workman is entitled to compensation under the law of the place where the accident happens. In such a case however compensation may be paid if the workman's usual place of employment is within the province, and if he happens to be outside the province at the time of the accident for some casual purpose connected with his employment in Ontario; compensation may be paid also if the accident happens on a steamer, vessel, or railway, and the workman is a resident of the province but engaged in work which lies partly inside and partly outside the province. (The Workmen's Compensation Act, as amended in 1915, allowed the payment of compensation for accidents outside the province only if the employer's chief place of business and the workman's usual place of employment is in Ontario, and if the workman's employment outside Ontario has lasted less than six months, or if the accident happened on a boat or railway and the workman is resident in the province, but engaged in work which is performed both inside and outside the province.)

Special Elections.—The Railway Employees' and Commercial Travellers' Voting Act of

1923, providing for special polls for these classes in municipal elections so as to enable municipal councils to extend the time for these polls, was again amended to permit councils to reduce the special voting days from three to two days.

Early Closing in Villages.—The amendment of 1921 to the Factory, Shop and Office Building Act, which permitted city and town councils to pass a by-law requiring the closing of shops within their respective districts under certain conditions, was enlarged to extend this privilege to village councils. The conditions referred to are that three-fourths of the shop-owners of the class concerned shall apply for the by-law; the council may then, within one month after the application, pass a by-law requiring all the shops of that class to close on a particular day of the week after 12.30 o'clock noon, and until 8 a.m. next day, and during such periods of the year as are named in the application.

Pensions for Public Library Employees.—The boards of public libraries established under the Public Libraries Act of 1920 were authorized to pay to any employee retiring by reason of age, ill-health or other disability, such retiring allowance or gratuity as they think proper, up to the amount of the aggregate salary of the employee for the last three years of service. In cities of more than 50,000 inhabitants library boards may establish contributory or non-contributory funds for providing pensions or life insurance or both, in the interest of these employees, but such action by a board must first receive the approval of the city council.

Requisitioning Labour for Forest Fires.—By an addition to the Forest Fires Prevention Act of 1917 reeves of townships are given authority, when dangerous fires are in progress, to summon the assistance of male persons between the ages of 18 and 60 years, excepting only railway trainmen, telegraphers and dispatchers on duty, doctors and persons physically unfit. In such a case municipal councils have authority to fix by by-law the remuneration to be paid to the persons so employed.

Agricultural Loans.—The Agricultural Development Act of 1921 was amended by the addition of a section which provides for the establishment of the office of Commissioner of Agricultural Loans, to whom all the powers, duties and obligations of the existing board are transferred.

Social Legislation.—Among the general social legislation enacted was an amendment to the Adoption Act, providing that the consent of the child is not to be required in a

case in which it appears to the judge before whom application is made that the child has lived since infancy with the applicant and has known no other parent.

Another act, which takes effect on July 1, 1925, provides for the establishment as a corporation of "The Boys' Welfare Board of Ontario," to consist of thirty members. The Board will have power to establish a home for boys, who become its wards, to provide for their training and to fix the age and the conditions under which boys may be admitted, the period for which they may be kept, and the conditions under which they may leave the home, etc.

The Landlord and Tenant Act was amended to provide that when a landlord unreasonably withholds from the tenant permission to sublet the tenant may refer to a judge the question whether or not such permission should be given.

Alberta

The fifth session of the fifth legislature of the Province of Alberta opened on February 17, and on April 19 the measures that had been passed received the Royal Assent, the legislature adjourning until June 15, when it was to reconvene for the consideration of the railway situation in Northern Alberta.

Payment of Miners' Wages.—The Mines Act was amended with the object of ensuring the payment of wages to miners. The amending Act provides that the manager or overman of a mine shall keep a record showing the sums due and the amounts actually paid on each pay-day. This record must be open for inspection at any time by any inspector under the act. A monthly statement must be furnished to the chief inspector, in reply to the question: "Have all wages due and payable under the terms of the Mines Act, up to this date, been duly paid to all the workmen employed in or about the said mine?" In the event that any wages remain unpaid the chief inspector may apply to a judge for the appointment of a receiver of the profits of the mine. The order appointing a receiver may require an accounting of all sums received by the mine company for six months, and a return of these sums to the receiver.

Minimum Wages for Women.—A new Minimum Wages for Women Act was passed, to take the place of the Minimum Wage Act of 1922, which was repealed. The construction of the earlier act was subjected to criticism in connection with the refusal of the Hudson's Bay Company last year to comply with certain of the Board's orders and the subsequent decision of the Supreme Court of Alberta declaring these orders to be invalid. (LABOUR

GAZETTE, January, 1925, page 2; December, 1924, page 1109; October, 1924, page 908).

The new act is largely a reprint of the act of 1922. A memorandum attached to the bill stated that most of the changes are in the direction of giving specific legislative endorsement to the practices of the Board, which though properly authorized by the old act were not clearly set out therein. The major changes from that act are as follows: (1) It is made clear that the Board can determine with greater freedom as to what class of employees or class of employment the minimum wages are to affect. Thus it is made clear that a process such as box-folding, which might be common to many trades, can be treated as a separate employment; (2) It is made clear that if an order does not state to what place it is applicable, it shall be taken to be applicable to all the places mentioned in the schedule to the Act. These places are the same as those mentioned in the earlier act, namely, Calgary, Edmonton, Lethbridge, Medicine Hat, Red Deer, Wetaskiwin, Blairmore, Camrose, Cardston, Coleman, Drumheller and Redcliff; (3) Specific power is given to the Board to authorize deductions when hours less in number than the ordinary shift are worked, and in cases where meals or lodgings are furnished in lieu of wages; (4) Specific powers are given to the Board as to fixing learning periods, and as to instruction of learners; (5) Provision is made for individual permits for handicapped employees; (6) Signature of orders by the chairman and the secretary is specially provided for; (7) Publication in the *Alberta Gazette* is to be sufficient notice of the existence and of the terms of the order; (8) Provision is made for the temporary increase of working hours on the occasion of a breakdown of machinery, etc.; (9) Learners in any industry are not to be called upon to pay premiums.

Workmen's Compensation.—Frost-bite was added to the list of industrial accidents which are compensable under the Workmen's Compensation Act, this amendment being retroactive in its effect to September 30, 1924. (It was stated in the legislature that several unemployed men at Calgary who had accepted work clearing snow drifts off the railway tracks had lost fingers or toes or sustained other injuries during a blizzard last December). Schedule 1 of the act, detailing the nature of the works in connection with mines that come under the act, was amended so as to include beyond dispute subsidiary operations, such as the removal of overlying strata.

School Holidays.—Ash Wednesday, the King's Birthday and Labour Day were re-

moved from the list of compulsory school holidays, but district boards were given power to declare a holiday on any of these days..

Fire Departments' Hours of Labour.—The Fire Departments' Hours of Labour Act, passed at the session of 1924, to provide for the granting to fire fighters of one full day's rest in seven, was amended in regard to the procedure which municipal councils are to follow in order to give effect to its provisions. The act originally provided that action could be taken after ratification of the proposal by a vote of the electors at the next civic election, but under the amendment a by-law must be submitted to a vote of the electors upon receipt of a petition to that effect signed by at least 10 per cent of the electors who voted at the last preceding municipal election.

Hours in Retail Stores.—The charter of the City of Edmonton was amended in the section governing the closing of retail stores on public holidays, at 6 p.m. on week days, and at noon on each Wednesday from April 30 to September 1, provision being made that these requirements are not to apply during the three business days preceding Christmas in any year.

Child Welfare.—A Child Welfare Act was passed to take the place of the Children's Protection Act of 1909. It provides for the consolidation under one department of the government of all branches of administration pertaining to child welfare. The new act contains provisions similar to the Manitoba Act of 1922 respecting the Welfare of Children, which took effect on September 1, 1924, and which was described by the general secretary of the Social Service Council of Canada as "the most modern child welfare act in Canada or on the continent."

The Alberta Act is to take effect on its proclamation by the Lieutenant-Governor in Council. It establishes the office of Superintendent of Child Welfare, who will have numerous duties in addition to those formerly carried out by the Superintendent of Neglected and Dependent Children. These duties include, in general, the "encouragement and promotion of the conservation of child life in Alberta; the encouragement and supervision of child welfare associations and children's aid societies; to secure, through these associations, a system of suitable foster homes, which will be subject to his supervision; to supervise immigrant children and secure their enrolment as wards of the province, etc." Part II of the act deals with the treatment of neglected children. Among other conditions which warrant police officers in treating children as being in the "neglected" class the act

names the peddling by children under 12 years of age of newspapers or other articles, or the distributing of advertising matter for hire in any public place during the day or night; the employment of children under 16 years of age between the hours of 10 p.m. and 6 a.m.; the peddling, by children under 14 of any articles during school hours or after 9 p.m. Children found to be neglected may be returned to their parents, subject to supervision, or they may be committed to the care of the Superintendent or of a society. Part III outlines the procedure to be taken in connection with handicapped children, and Part IV deals with immigrant children, who are to be enrolled as wards of the Province, and placed in general charge of the Superintendent of Child Welfare. Part V governs child welfare organizations; Part VI, contains general provisions, defines the powers and duties of Municipal Councils, makes rules for shelters and child welfare officers, and provides penalties for the ill-treatment of children. It is stated to be an offence under the act, punishable by a fine up to \$200, with imprisonment for six months, to cause children under 16 years of age to beg in public "whether under the pretence of singing, playing, performing, offering anything for sale," or otherwise; to cause a child under 16 to be employed for hire between 9 p.m. and 8 a.m.; to cause a child under 16 to perform for profit at a circus or any place of public amusement, except under a special license from the Superintendent. The act defines the responsibility incurred by municipalities in connection with the financial support of children in shelters or other institutions.

Farmers' Co-operation.—The opening Speech from the Throne stated that the most notable development of the past year was the interest displayed by the people of Alberta in the co-operative marketing of products of the farm. The adoption of more effective methods of marketing, it was stated, could not fail to bring larger returns to the farmer, which in turn would result in a general improvement of business. The Alberta Co-operative Credit Act was amended in the section prohibiting borrowers from disposing of stock, etc., so as to provide that chattels subject to the lien of a co-operative society may not be sold without the consent of the directors. The section regarding the security to be required of persons endorsing the note of a borrower was revised, and a new section was added providing for the formation of beet sugar co-operative credit societies.

Relief of Farmers.—The Provincial Relief Act of 1922, concerning advances made by

the Provincial Government for the purchase of feed and for the relief of farmers and the securities for the repayment of these advances, contained a provision to the effect that chattel mortgages taken to secure money advanced by way of relief do not require renewal if they were taken in the years 1919, 1920 and 1921. This provision was amended so as to include mortgages taken in 1922.

Help for Settlers.—Reference was made in the Speech from the Throne to the joint arrangement between the Federal and Provincial Governments and the Railway Companies providing free transportation for settlers, with their stock and equipment, who desire to move to more favourable locations in the province. This step was taken in order to relieve adverse conditions in certain sections. The government had also, it was stated, shown its appreciation of the need for the careful selection and training of immigrants by re-opening the Vermilion School of Agriculture, where 57 young men from Great Britain were receiving elementary agriculture instruction.

Over 3,200 employees of Imperial Oil, Limited, in Canada, Newfoundland and South America recently received stock certificates from the company through the Co-operative Investment Trust inaugurated in April, 1920 (LABOUR GAZETTE, April, 1920, page 422, and April, 1925, page 347). Shares valued at about \$10,000,000 have been distributed to these employees.

The United States Department of Commerce announces that the biennial census of manufactures, 1923, shows the value of products (at factory prices) of manufacturing establishments in the United States in that year to have aggregated \$60,481,135,000. This aggregate represents an increase of 38.5 per cent as compared with \$43,653,283,000 in 1921, but is 2.5 per cent below the corresponding total for 1919, which was \$62,041,795,000. Measured, however, in quantities, not values, manufacturing industries showed a considerable increase in production between 1919 and 1923, the increase being estimated at 19 per cent. The average number of wage earners employed during 1923, 8,763,233, exceeded by 28.2 per cent the number reported for 1921, 6,946,570, but was 2.6 per cent less than the 1919 total, 9,000,059. The total wage payments in 1923, \$10,985,895,000, shows increases of 34 per cent as compared with \$8,200,324,000 in 1921 and of 5 per cent as against \$10,461,787,000 in 1919.

WORKMEN'S COMPENSATION IN NOVA SCOTIA IN 1924

THE report of the Workmen's Compensation Board of Nova Scotia for 1924 gives in its general review an outline of the cost of compensation under the Workmen's Compensation Act since it became operative on January 1, 1917. In the eight-year period ending December 31, 1924, 53,542 accidents occurred in the industries within the jurisdiction of the Board; 43,660 compensable claims were presented, all but 81 of which had been finally adjusted. The total compensation paid or payable to workmen or their dependants amounted to \$7,801,573. This amount does not, however, represent the entire cost of the accidents for the period, as the administration expense is not included. The amount actually paid to workmen or their dependants was \$3,779,192, and the amount at the end of 1924 required for the purpose of paying life and other pensions and compensation to disabled workmen was \$4,022,381. One thousand and one children under 16 years of age were awarded monthly pensions while under that age, and 417 widows were awarded pensions for life or until re-marriage. Dependant mothers and fathers to the number of 201 were awarded compensation; 24 members of the family other than widows, children and parents, more or less dependent upon workmen who had been killed, received benefits; and life pensions were awarded to 1,873 workmen who were disabled, wholly or partially, for life. Prior to January 1, 1920, medical aid was not furnished except in special cases. Since that date injured workmen have been entitled to free medical aid for thirty days from date of disability, and in the five-year period \$234,155 was paid for such service. The total amount allowed for bad and doubtful debts since the Act came in force was \$35,000, which was less than one-half of one per cent of the assessment.

Special attention is drawn in the report to a provision of the Workmen's Compensation Act which enables the Board to provide special medical aid in cases requiring exceptional treatment. In commenting on this provision the Board says that in such cases relief has been given under the Act "of a nature which cannot be realized in dollars and cents." Examples are given showing how this provision is applied. The report also quotes an example showing how the changes made in the Act have been to the advantage of the workmen.

There were 6,301 accidents reported to the

Board in 1924, this being 482 less than in 1923. Of the total number, 79 were fatalities. In two cases no claim was made. In one case the claim was disallowed, and in another case there were no dependants left by the deceased. In 10 cases the Board paid the burial expenses but the question as to the compensation payable had not been finally decided at the end of the year. In 61 out of the 77 cases in which compensation was demanded, compensation was granted and the payments begun to the dependants during the year. Apart from the fatal accidents there were 563 accidents during the year that were found to be non-compensable, and in 755 cases medical aid only was paid. In 162 cases permanent partial disability resulting from accidents were dealt with by the Board, and there were in all 4,665 accidents which caused total disability for a week or over.

The total cost of compensation in 1924 was \$1,163,710.64 as compared with \$1,324,759.88 in the previous year. The decrease or increase in accident cost in 1924 as compared with the previous year is shown below by classes:—

Industry	Increase	Decrease
	\$	\$
Coal and other mining.....		97,491 00
Lumbering.....	11,142 00	
Iron and steel.....		34,931 00
General manufacturing.....		12,494 00
Building and construction.....		14,791 00
Public utilities.....	6,359 00	
Transportation.....		13,268 00
Shipping and navigation.....	49,787 00	
Provincial Highways Board.....		55,651 00

The average ratio of the cost of accidents to the total wages paid was 2.57 in 1924; 2.37 in 1923; 1.96 in 1922; 1.55 in 1921; 1.68 in 1920. 1.53 in 1919; 2.55 in 1918; and 2.25 in 1917.

The wages paid in each of the years during the eight-year period was given as follows: in 1924, \$45,197,952; in 1923, \$55,746,721; in 1922, \$48,211,601; in 1921, \$60,970,120; in 1920, \$74,600,999; in 1919, \$60,017,418; in 1918, \$51,108,492; and in 1917, \$39,326,243.

The estimated cost of providing medical aid amounted to \$62,564.18 in 1924, as compared with \$61,304.02 in 1923. The ratios of the cost of medical aid to the compensation cost of accidents in those classes in which the Board paid medical aid for 1923 and 1924 are as follows:—

	1923	1924
Lumbering, sawmills, etc.....	12.7	12.9
General manufacturing.....	9.9	10.1
Building and construction.....	6.5	13.2
Public utilities.....	8.7	15.7
Transportation.....	8.2	10.4

In the Mining and Iron and Steel classes, and in the Navigation class the ratio is not given. In the former classes the greater por-

tion of medical aid is furnished under medical aid schemes adopted by the workmen, and consequently is not furnished by the Board. In the Navigation class medical aid is as a rule furnished under the Merchants' Shipping Act.

At the end of 1924 the book surplus of the Board was \$184,971.05, but assessments amounting to \$111,580.61 were outstanding, leaving a cash surplus of \$73,390.44.

Nova Scotia Accident Prevention Association

The Nova Scotia Accident Prevention Association held its sixth annual meeting in Halifax on April 22, employers in all classes of industry in the province attending. This association has authority, under the Workmen's Compensation Act, to make rules for the prevention of accidents, these rules when approved by the Workmen's Compensation Board, being binding on all the employers included in the class affected thereby.

A code of safety rules for sawmills was submitted for the consideration of the meeting and after discussion was adopted by the Association. This code had already been given tentative approval, but the sanction of a general meeting of the Association was required before it could become binding upon sawmill operators in the province of Nova Scotia. On the conclusion of the regular business of the meeting, an interesting address was given by the chairman of the Workmen's Compensation Board Mr. V. J. Paton, on the operation of the Act during the past year, with special reference to payrolls, method of assessment and collection, administration expenses, medical aid, and investment of pension funds.

In presenting his report for the year 1924-25, as president of the Association, Mr. C. V. Monaghan pointed out that the general theory of workmen's compensation is that industry should bear the cost of the loss of life or limb occasioned by production in the same manner as it bears the expense of worn out machinery, and it devolves therefore upon the employers to take an active interest in reducing the number of accidents. The president also took occasion to state that the work of the Association is made somewhat difficult owing to the limited industrial development of the province and the absence of large industries wherein safety activities could be carried on in an organized manner. It was pointed out by the president that aside from this accident prevention work, the Association had been endeavouring during the past year to promote a better understanding of the workings of the Compensation Act in the various classes of in-

dustry. The field officer in his visits to employers had sought to correct false impressions in this regard, and the literature issued by the Association had at various times been used for the purpose. The president expressed the opinion that these activities had been instrumental in bringing about a more general attitude of co-operation between employers and the Board.

The secretary's report showed that with the object of keeping in touch with organizations engaged in accident prevention work in other provinces, an exchange service was arranged whereby bulletins and other safety literature would be interchanged. The chief benefit of this arrangement to the Association was in keeping in touch with the means used by other organizations in carrying on the work; the literature received being in most cases not applicable to conditions existing in this province. Referring to the expenses during the year 1924, the secretary reported the total cost as \$8,904; the total expenses in the year 1923 amounted to \$8,833. Owing to the fact that accident prevention work is carried on in a varied manner in the other provinces it was not possible to make an accurate comparison of costs. In the province of Ontario, however, where Associations similar to that in Nova Scotia are in operation, the cost in the year 1923 amounted to about two per cent of the total income of the Board, as compared with a percentage of .54 (about one-half of one per cent) in Nova Scotia.

A comparative statement was read by the secretary showing the chief items in connection with the expenses of the Association during the years 1923 and 1924. There was a decline of about 20 per cent in the total payroll for the year 1923 in comparison with the previous year; there decreases being chiefly in the coal mining and metal trades groups, which, incidentally are the largest classes of industry under the Act. The payrolls for the other classes were all somewhat smaller with the exception of the lumbering industry which

had an increase in payroll of nearly 25 per cent.

The field officer, in a review of his activities during the year, discussed among other matters the general attitude of employers in the lumbering class toward compensation legislation. He stated that the employers felt that many doctors were not dealing as fairly as they might with compensation cases, as they were inclined to encourage malingering on the part of the workmen. Many employers feel that an injured employee should be required to report an injury immediately or within a reasonable time, to his employer or some representative of his, such as the superintendent or foreman. The field officer concluded by suggesting that a direct appeal should be made to

all doctors to remember that the accident fund from which they were paid was a public fund raised by direct taxation.

The election of officers for the year 1925-26 resulted as follows: President, A. W. MacDonald, Dominion Coal Company, Limited, Glace Bay, Nova Scotia; first vice-president, A. E. H. Chesley, Dominion Atlantic Railway, Kentville, Nova Scotia; second vice-president, R. E. Dickie, Canadian Lumber Company, Limited, Stewiacke, Nova Scotia; secretary-treasurer, H. R. Thompson, Canadian Manufacturers' Association, Amherst, Nova Scotia; assistant-secretary, R. J. Walsh, Box 267, Halifax, Nova Scotia; field officer, M. L. Fraser, Box 326, New Glasgow, Nova Scotia.

Pension Plan of Metropolitan Life Insurance Company

The Metropolitan Life Insurance Company, New York, has established a retirement or pension system for its employees, described as a "group refunding retirement bond system." It is to cover all employees of the company except executive officers, and will supercede the former saving fund. The essential features of the plan are: (1) That the company will at its own expense purchase each year for each employee with more than five years service one group annuity bond. Each bond provides for a retirement income of \$1 per month commencing at "normal retirement age" of 65 years for males, and 60 years for females, provided the employee has rendered 20 years of service. In case an employee shall have reached the retirement age and has not served 20 years, payment begins at the age attained after 20 years of service;

(2) In addition to the "group annuity bond" which the company purchases, each employee with more than five years service may purchase each year, in co-operation with the company, one "group refunding retirement bond." This bond, which is paid for by employees in twelve monthly contributions, will provide an annuity of \$1 or more per month commencing at normal age of retirement and continue for life; (3) For all employees purchasing group refunding retirement bonds the company will, at its own expense, provide separate group disability benefit. Benefit for all employees becoming totally incapacitated consists in the payment of one-third of their salary.

The company has 2,500 employees in Canada, those with five years' service being eligible for pensions.

Workers' Social Insurance in Czechoslovakia

The Czechoslovak Republic, in October, 1924, enacted a social insurance act which insures employees against sickness, invalidity and old age. The act, which is not to come into force until the passing of a further act for the insurance of persons working on their own account, creates an organization consisting of a Central Insurance Institution, formed on the basis of the existing local provident institutions. The employer and the insured each pay half the required contribution, and the state pays a subsidy to invalidity, old age, and widows' and orphans' pensions. The administrative bodies of all the insurance institutions are composed of representatives of the government, the employers, and the insured. In order to provide for adequate control of the local institutions, their officials are

appointed by, and are responsible to, the Central Insurance Institution. Disputes are dealt with by a system of arbitration courts and insurance courts, with final appeal to the Superior Insurance Court at Prague. The act is expected to come into force in 1926.

An article in the April issue of the *International Labour Review* (Geneva), gives details of the measure. The existing system of sickness insurance was used as a basis for the general scheme. This system was begun in 1919, the intention being to enlarge its scope so as to provide invalidity and old age insurance to all persons under a contract of employment. Agricultural workers and domestic servants share in the benefits provided by the new act.

MINING OPERATIONS IN QUEBEC IN 1924

THE annual report of the Department of

Colonization, Mines and Fisheries on mining operations in the province of Quebec in 1924 shows a decrease of 11.3 per cent in the value of the minerals produced during the year as compared with 1923. The total value of production in 1924 was \$18,952,896, divided as follows: building materials, \$11,380,977; other non-metallic minerals, \$7,191,115; metallic minerals, \$380,804. The production of metallic ores, although small, was slightly higher than in 1923, the increased production being due to better prices of the metals; lead and zinc ore mining was much more active; the production of copper sulphur ores, which had practically ceased for three years, was resumed, and molybdenite also appeared on the list after having dropped out since 1919. A small amount of gold and silver was produced in the shape of by-products from the treatment of the copper, lead and zinc ores. There was, however, intense prospecting and developing activity in the Northwestern Quebec gold belt. Conditions in the asbestos market were unsatisfactory, due mainly to a keen price-cutting competi-

tion in selling fibre to manufacturers, which resulted in a fall of prices. Feldspar mining was comparatively active, but mica showed a serious falling off after a good year in 1923, the decrease being due to over-production in 1923, and also to the competition of Madagascar mica in European, and even in United States markets. Building materials showed a decrease of about 4 per cent as compared with the 1923 figure, remaining at about the same figure as in 1922, a reduction in the building of large edifices and in industrial and road construction being largely responsible. It is estimated that 8,270 persons were employed in the mines and quarries in 1924 as compared with 8,925 in 1923. This is a decrease of 7 per cent. Producing mines numbered 3,298 and non-producing mines, 417.

The accompanying table shows for each mineral produced in Quebec, the actual number of workers engaged, the wages paid and quantities produced in 1924, as well as comparative figures of the value of the mineral products for the years 1923 and 1924:—

Substance	Number of workmen	Wages	Quantities	Value in 1924
		\$		\$
Asbestos, tons.....	2,309	2,823,633	225,224	6,571,594

Tile, drain, and sewer pipe, pottery, etc.....	90	76,930		436,696
Totals.....	8,270	7,581,481		18,952,896

Of the \$7,581,481 received in wages by the workmen, the miners received \$3,915,506 and the quarrymen, \$3,665,975. The number of 300-day men at work at the mines was 3,016,

and at the quarries 2,458. The average wage earned by a 300-day workman during 1924 was \$1,171 and for the previous year \$1,068. The increase in wages was partly due to

higher wages paid by companies engaged in the development of mining properties in Northwestern Quebec. [The method employed to ascertain the number of 300-day men represented by the 8,270 persons employed during the most active season of the year, is to divide by 300 the number of days worked by the men at each mine and quarry.] The following table shows the actual number of workers employed in the mines, quarries and connected plants during 1924; also the number of workers calculated on a 300-day basis in the years 1923 and 1924:—

Mines, Quarries and Plants	Number of men employed 1924	Number of men calculated on 300-day basis	
		1924	1923
Asbestos (quarries and mills)...	2,399	2,109	2,852
Copper and pyrite.....	87	101	62
Chrome (mines and mills).....			20
Feldspar, kaolin (mines and mills).....	166	118	87
Gold and silver.....	367	304	101
Graphite, mica, phosphate.....	240	130	102
Magnesite, dolomite.....	99	48	61
Mineral paints, ochre (pits and mills).....	42	26	47
Molybdenite.....	25	15	1
Quartz and silica rock (quarries and mills).....	59	44	32
Talc.....	21	16	13
Titaniferous iron ore, zinc and lead.....	207	105	68
Brick, pottery (clay pits and plants).....	1,036	764	1,007
Cement (quarries and plants).....	593	655	839
Granite (quarries and works)...	356	255	339
Lime (quarries and kilns).....	252	234	137
Limestone (quarries and dressing works).....	1,609	1,110	1,032
Marble, slate, sandstone (quarries and works).....	327	162	169
Sand (pit and river sand).....	382	278	152
	8,270	6,474	7,123

During the year the Bureau of Mines received notices of 305 serious accidents, of which 12 were fatal, the remainder entailing

loss of time of ten days or more. The accident average was 47.3 per 1,000 men working on a 300-day basis; in the mines the average was 71.2 per 1,000 workers and in the quarries 21.6. The twelve fatalities in the mines and quarries gave an average of 1.83 per 1,000 men-year. The corresponding averages were 3.36, 2.51, 2.72 and 2.38 for 1920, 1921, 1922 and 1923 respectively. In the mines proper the proportion of fatal accidents was 2.98, and in the quarries .86.

An analysis of the accidents shows that the causes were similar to those reported in previous years: in the mines, 87 per cent of the fatalities were due to falls of rock, and 14.3 per cent were caused by hoisting apparatus; in the quarries, falls of ground and explosives each accounted for 50 per cent of the deaths among the workmen; and in the connected plants the deaths were attributed equally to falls of rock, falls of objects, and shafting.

The report draws attention to the regulations for the safety of mine shaft operations which were issued by order of the Lieutenant-Governor in Council on April 17, 1924. It is now ruled that shafts 100 feet or more in depth must be divided into two compartments, one to be exclusively used as a passage-way. The regulations set the length of pannels of ladders, their inclination, the space between the rungs, etc.; it established the principle of the double exit from underground workings; it provides for the construction of fences around shaft openings, of safety apparatus for cages and hoisting machinery; it makes compulsory a code of mine signals with signalling apparatus, and it indicates the means to be taken to insure safety for miners during the process of shaft sinking.

Arbitration in British Civil Service

The British Chancellor of the Exchequer, intimated, in May, 1923, that the Government were prepared to accept the principle of arbitration for the Civil Service. Later, the Civil Service National Whitley Council was instructed to consider what arrangements could be made to give practical effect to this decision. The council recommended the establishment of a Civil Service Arbitration Board, which has now been constituted. The Council recommended that the machinery for arbitration should be the Industrial Court established by the Industrial Courts Act, 1919. The Court will consist of a Chairman, who will be either the president of the Industrial Court or the Chairman of a division of the Court, together with one member drawn from a panel of persons appointed to the Industrial Court by the Minister of Labour as representing the

Chancellor of the Exchequer for the time being, and one member drawn from a panel of persons appointed to the Industrial Court by the Minister of Labour as representing the Staff Side of the National Whitley Council for the administrative and legal departments of the Civil Service. The Court thus constituted will not hear claims in respect of classes with salaries in excess of £700 a year exclusive of bonus (except in cases of classes for which the scale of pay commences at a figure of less than £700 a year, but rises to a figure above £700 a year, in both cases exclusive of bonus), unless by the consent of both parties concerned in the claim. Claims eligible to be dealt with by the Court will be those affecting the emoluments, weekly hours of work, and leave of classes of civil servants. Cases of individual officers are excluded.

JOINT SANITARY BOARD FOR GARMENT INDUSTRY AT TORONTO

A NOTE in the issue of the *LABOUR GAZETTE* for April, 1925, referred to the recent establishment of a Joint Board of Sanitary Control by mutual consent of the employers and employees in the garment industry at Toronto. This development followed an investigation undertaken by the president of the Toronto Board of Trade into allegations that had been made by a representative of the International Garment Workers' Union as to the existence of unsanitary conditions in some of the smaller shops (*LABOUR GAZETTE*, September 1924, page 738). The agreement between the associations and union, under which the Board was established, is outlined in this issue, in the section "Recent Industrial Agreements".

Members of the Joint Board

The members of the Joint Board of Sanitary Control are as follows:—

Representing the public: Dr. J. A. Dale, Professor of Social Science, Toronto University; Mrs. Adeline Plumptre, of the Canadian Red Cross Society; Mrs. J. Wesley Bundy, President of Toronto Womens' Civic Association; Dr. C. P. Fenwick, Head of the Hygiene Department, and Mrs. A. Selick, *Canadian Jewish Review*.

Representing the Cloak Manufacturers' Protective Association: Mr. B. A. Sutin, President Cloak Manufacturers' Protective Association; Messrs. M. Shankman, A. Rovner, J. H. Winters, A. Roth and Sol Polakoff.

Representing Joint Board International Ladies' Garment Workers' Union and the Joint Board of Cloak Makers of Toronto: A. Kirzner, Dr. D. Esser, Charles Shatz, and H. Reingold.

In addition to the above the Union has arrangements made for an Arbitration Board for the settlement of trade disputes, in the person of Dr. J. W. MacMillan, who is also chairman of the Minimum Wage Board of the Province of Ontario. Dr. MacMillan was chosen as chairman by both employers and employees.

Constitution of the Board

The nature and functions of the new organization are set forth in its constitution, which is as follows:—

Preamble.—As a result of a Collective Agreement signed between the Toronto Cloak Manufacturers' Protective Association and the Joint Board of the International Ladies' Garment Workers' Union of Toronto, a Joint Board of Sanitary Control to be formed for the purpose of introducing, defining and enforcing that

section of the said Collective Agreement that provides for sanitary and safety conditions to be introduced in the various factories with whom the Union has contractual relations. Therefore, for the governing of the said Board of Sanitary Control, the following constitution has been adopted.

Article I.—The name of the Organization shall be the Joint Board of Sanitary Control of Toronto, Ontario, Canada.

Article II.—The purpose of the Board shall be to define and assist in establishing and maintaining such standards of sanitation and fire prevention in the various shops or factories of the Ladies' Garment Industry of Toronto, with whom the Joint Board, International Ladies' Garment Workers' Union, has contractual relations collectively or independent as the Board may deem necessary for the preservation of the health and lives of the workers, and the safety of the public.

Article III.—1. The Board shall have the absolute right to designate through its authorized inspectors, a general or periodical inspection in the Cloak and Suit Industry with which the Union has contractual relationship collectively or independent, for the purpose of introducing and defining standards of sanitation, health, and fire prevention in such factories; and as a result of such inspection the Board may issue sanitary certificates to such shops. The reports of the inspectors will be in conformity with the standards introduced and approved by the Joint Board of Sanitary Control.

2. The Board shall have the right to withdraw such certificates of any factory in case of violations of standards of sanitation and fire prevention committed by manufacturers who are under the jurisdiction of this Board, and the Board may notify the public to that effect.

3. All union members in good standing of the International Ladies' Garment Workers' Union, employed in union shops under the jurisdiction of this Board shall have a medical examination to establish whether they are free from contagious disease. Those members of the union who will pass medical examination shall carry with them a health certificate card approved by the Board, and those workers who will fail to carry such health certificate card shall not be allowed to work in any of the shops under the jurisdiction of this Board.

Article IV.—1. To promote the best interests of the public and to safeguard their health, it is agreed that the Joint Board of Sanitary Control shall have the power to issue a sanitary label in the Cloak and Suit Industry in the City of Toronto, and in accordance with Paragraph II of the Collective Agreement with the Cloak Manufacturers' Protective Association in Toronto, and also on the principles based upon the rules and regulations now existing in the New York Market issued by the New York Joint Board of Sanitary Control.

2. Such sanitary label shall be issued only to those manufacturers who have contractual relations collectively or independent with the Toronto Joint Board, International Ladies' Garment Workers' Union, in having a sanitary certificate issued by the Joint Board of Sanitary Control of this city, in accordance with Article III Paragraphs 1 and 2 of this Constitution.

Article V.—The Board shall consist of not less than five representatives from each of the following groups:—

1. Toronto Cloak Manufacturers' Protective Association,

2. Joint Board of the International Ladies' Garment Workers of Toronto,

3. The Public of Toronto.

Article VI.—The officers of the Board shall consist of a Chairman, a Vice-Chairman, a Secretary and a Treasurer, two of whom at least shall be chosen from among the representatives of the public.

The term of office shall be until successors of the officials have been duly chosen.

Vacancies occurring between elections may be filled temporarily by the Board.

Article VII.—An Executive Committee consisting of the Chairman, the Secretary, the Treasurer, and one representative of the Union and one of the Employers' Association shall be empowered to act in emergencies during the intervals between meetings of the Board, but any action taken by the said Executive Committee shall not be deemed as a precedent until ratified by the Board.

Article VIII.—Each of the three groups represented on the Board shall be entitled to one vote. Matters relating to policy or concerning standards to be adopted shall be voted upon at regular or special meetings of the Board only when qualified representatives of all groups are present, or after ten days' previous notice in writing to all members of the Board of a meeting, and the matters proposed to be voted upon.

Article IX.—The expenses authorized by the Board shall be borne equally by the Manufacturers' Association and the Joint Board of the International Ladies' Garment Workers' Union of Toronto, including the Independent Manufacturers.

Manufacturers who have separate contracts with the union: It is recommended by the Board that each of these manufacturers shall share his burden of the expense authorized by the Joint Board of Sanitary Control by contributing an equal share amounting to the budget worked out by the Board.

Article X.—The Board shall hold at least one meeting each month, time and place designated by the previous meeting or by the officers of the Board.

Article XI.—This Constitution may be amended upon a majority vote of the Board at any regular meeting after due notice of the proposed amendment has been given in writing to all members of the Board.

Sanitary Standards for Workshops

The Board has already established sanitary standards for workshops as follows:—

1. Workshops located in the rear of houses, dwelling houses, or in tenement houses, or attics, or converted tenement houses, are prohibited by the Board. In case where such shops exist under a short lease with the property owner, and to be expired in a short time, special permission must be obtained from the Board to remain in such shop until the expiration of such lease or contract. If alterations should be necessary in such shop or factory in order to conform with the standards of the Board, such alterations must be made under the guidance of the Board.

2. All machines and other appliances which are in use, must be placed so as to have sufficient natural or artificial light at all times. The Board to determine in individual cases in regard to all complaints concerning insufficient or improper lighting.

3. All lights must be so placed as not to glare in the eyes of the worker; they must be at a proper distance from the operative with shades approved by the Board.

4. All shops should be properly aired during noon pauses. Proper ventilation should at all times be maintained. In the event of a dispute on the question in a shop, decision as to what constitutes proper ventilation to be left to the Joint Board.

5. "No irons heated directly with coal or gas tubes may be allowed in the shops. Whatever gas irons are used they must be applied with air pressure; they

must be properly adjusted and the pipes made gas tight." Any new invention which will improve the present method of ironing shall be first approved by the Joint Board of Sanitary Control.

6. Each shop to be maintained by the employer in a clean and sanitary manner at all times. Floors to be swept regularly by a special caretaker who shall deposit all sweepings in covered metal waste cans, and see that contents of all waste cans are placed for garbage men at all collections. The shop walls and windows to be kept clean and metal rubbish receptacles with metal covers to be provided.

7. Toilet rooms to be kept clean and in good condition. Adequate toilet facilities to be maintained with separate toilets for men and women screened from public view. Toilets to be ventilated and lighted during working hours.

8. Rest room in a suitable place in the factory adequately furnished by the concern shall be provided for each shop.

9. Each shop shall be provided with an approved first aid medical kit approved by the Joint Board. Medical or nursing service shall be available in case of minor as well as of major accident. (This is an attempt to meet the conditions that some Toronto factories are too small to maintain a regular nursing service.)

10. It is recommended that proper and sufficient lunch accommodations shall be provided apart from the work benches and machines, the employer to provide service for the maintenance of these accommodations in good condition, the employees to deposit their leavings in a metal can with cover provided by the employer in efforts to maintain cleanliness in the place provided for lunch. This shall apply to those factories where workers bring their lunches in the shops.

11. An adequate number of approved fire extinguishers bearing the label of the Underwriters' Laboratories must be installed in convenient places.

12. All exit doors from the shops shall be opened outwards and kept unlocked (emergency bolts preferred) during working hours.

13. Aisles to be three feet wide, and all stairs and landings to fire escapes to be kept free from packages or other obstructions.

14. Notices of fire exits to be properly placed in designated places in the factory, and such notices to be printed in large red letters.

15. Fire drills in all union shops to be installed and rehearsed with the workers not less than once a month under the instructions of the Joint Board of Sanitary Control.

16. The shafts and transmission parts of the machines to be well guarded.

17. Smoking in the factory is strictly prohibited.

The total number of cases of poisoning, anthrax and epitheliomatous and chrome ulceration in Great Britain and Northern Ireland reported under the Factory and Workshop Act during April, 1925, was 49. Thirteen deaths were reported during the month, eight due to epitheliomatous ulceration, four due to anthrax, and one due to lead poisoning. In addition, seven cases of lead poisoning (including one death) among house painters and plumbers came to the notice of the Home Office during April, but notification of these cases is not obligatory.

LABOUR DEPARTMENTS AND BUREAUS IN OTHER COUNTRIES

GOVERNMENT departments to administer laws for the protection of labour have been gradually established in most countries as the industrial conditions and sense of social responsibility demanded.*

The general use of steam power and the consequent development of large factories and workshops in the early part of the nineteenth century made possible the employment of women and children outside the home in large numbers. Excessive hours of labour and other undesirable working conditions led to investigations by government authorities and to the enactment of factory laws in one country after another. Officers were appointed to enforce these laws, and in nearly all the older industrial countries the factory inspection service of the government became the nucleus of the larger and more varied services performed by these governments today. One of the first instances of a government department being created for the purpose of administering a special act relating to labour was the factory inspection service set up by the British Factory Act of 1833.

With the growth of industry and the consequent increase in the number of wage earners, the need for accurate information regarding labour conditions became increasingly great. In the early years, commissions of inquiry had to be set up prior to the enactment of any new law or when public opinion demanded an investigation into any matter. The lack of reliable and current information was a handicap to those urging further legal restrictions as well as to the employers and to the general public. Accordingly, bureaus for the collection and publication of labour statistics were established in one country after another, the Commonwealth of Massachusetts leading the way in 1869. Several American states followed the example of Massachusetts, twenty-six states having created bureaus of labour statistics before 1891. In that year the first government bureau in Europe for the special purpose of collecting and disseminating statistical and other information in regard to labour was established in France. The United States Government had taken similar action in 1884, and Great Britain established a labour department in the Board of Trade in 1893. Other European countries followed these examples, Spain in 1894, Belgium in 1896, Austria in 1898, Germany, Italy and Sweden in 1902 and Norway in 1903.

In several of these countries, the government had given some attention to the collection and publication of labour statistics before offices were created for this special work. The British Board of Trade had a labour correspondent appointed in 1886, in accordance with a resolution of the House of Commons of that year, to the effect that "steps should be taken to insure in this country the full and accurate collection and publication of labour statistics". In other countries such as Denmark and the Netherlands, there were bureaus for the publication of general statistics which included, to some extent at least, labour statistics.

In most countries, the bureau of labour statistics and the factory inspection service were placed under the same department of the government. As other functions were added, the labour bureau expanded and became a separate department, whose duties were to include the administration of statutes concerning wages, hours of labour, industrial accidents and diseases, workmen's compensation, industrial disputes and methods adopted to improve industrial relations, employment offices and unemployment, apprenticeship and technical training, labour organizations and any other subjects that the particular conditions of any country might have brought into the legislative field as well as the enforcement of the older laws regarding the employment of women and children.

In certain countries, the functions of the department were broadened to include all matters relating to social welfare; in other countries, the labour office is a division of a department dealing also with industry and commerce. In Chili, Czechoslovakia, Esthonia, Finland, Greece, Italy, Jugoslavia, Hungary, Norway, Roumania, Sweden and Switzerland, the enforcement of labour laws and the collection, analysis and publication of labour statistics are entrusted to a department of the government which is charged also with the publication of information and the administration of laws of a broader, social character. Such matters as housing, health, social insurance, old age pensions, and the welfare of women and children come within the scope of these departments.

The Austrian Ministry of Social Administration and the Polish Ministry of Labour and Social Assistance have similar functions, but in these two countries the collection and publication of statistics of labour are tasks assigned to a special statistical office which compiles labour statistics among others and which is not under the department charged

*Some account of labour departments and bureaus in Canada was given in the April issue of the LABOUR GAZETTE.

with labour affairs. Australia and New Zealand, South Africa, Denmark and the Netherlands have also central statistical offices where the general statistical work of the government is carried on, including that on labour statistics.

In the Argentine, Brazil, Colombia, Uruguay, Panama, Denmark, India, Japan and China, there is a labour bureau forming part of a Ministry which is largely taken up with other duties. In the Argentine, the Ministry of the Interior has had a labour department since 1912; in Brazil, the Ministry of Agriculture, Industry and Commerce deals with labour matters. Colombia and Panama established labour offices in 1924. The National Labour Office of Uruguay is part of the Ministry of Industry. In Denmark, the Ministry of the Interior is charged with labour regulation. In India the labour bureau is under the Department of Industries; in China, the Minister of Agriculture and Commerce is responsible for the administration of the factory law, and in Japan, there is a bureau of social affairs under the Ministry of Home Affairs.

In Belgium, Bulgaria, the Netherlands, Spain and Cuba, the labour functions of the government are performed by the Ministry of Industry and Labour. Prior to 1924, the South African Department of Mines and Industries included a bureau of labour within its organization but in that year a Department of Labour was formed under a Minister of Labour.

In Great Britain, New Zealand, South Africa, Germany, the United States, Haiti and Canada, there is a Department of Labour as a separate administrative unit of the government. In France, one ministry deals with both labour and health matters.

In Australia and the United States, as in Canada, certain functions relating to labour matters are performed by the federal government and other services are under state authority. The necessity of having at hand reliable information regarding labour conditions is recognized in all three countries in the provision made by each for the collection and publication of such information.

In Australia, the Bureau of Census and Statistics is required to publish statistics relating to employment and unemployment, factories and mines, and social and industrial matters generally, and the Commonwealth Court of Arbitration has jurisdiction over industrial disputes extending beyond the bounds of any one state. New South Wales has a Department of Labour and Industry under one Minister. In Victoria, Queensland and Western Australia, labour departments are administered as branches of a larger Ministry. In South

Australia and Tasmania, there is a factory inspectorate attached to one of the government departments.

In the United States, all the states but Alabama and Arizona have labour bureaus under one name or another. In addition to a department whose chief functions are factory inspection and the collection of information, there are frequently other boards or commissions charged with the administration of certain laws, such as statutes providing for minimum wages for women, workmen's compensation or conciliation and arbitration. In some states all these functions are carried out by the same body.

The federal Department of Labour at Washington was established in 1913 by an Act which described the purpose of the proposed department to be "to foster, promote and develop the welfare of the wage-earners of the United States, to improve their working conditions and to advance their opportunities for profitable employment". The organization of the department at the present time provides for separate divisions dealing with labour statistics, the welfare of women and children, conciliation, employment offices, immigration and naturalization.

Since the publication of information regarding labour conditions is one of the chief functions of national labour-bureaus, it follows that in almost all these countries there is an official publication devoted wholly or partially to labour matters, which not only serves to inform the citizens of the country itself but is of valuable assistance to other countries. By means of the free exchange of publications, each government is enabled to have information regarding labour conditions in other countries.

"The Trade Union Movements of the various industrial countries have always been marked by strongly national characteristics. The French, with their passion for local autonomy and group initiative, and their marked anti-political tendency; the Germans with their orderly arrangement, and strong centralization and internal discipline; the Belgians with their close union of political, industrial and co-operative organization; the Americans with their exclusiveness and hostility to Socialism; the British—pioneers in the Trade Union field—with their strength in defence combined with weakness in attack, and their elasticity of structure combined with lack of effective co-ordination; all bear the stamps of their distinct national histories."—The "*New Statesman*" (London).

SOCIAL INSURANCE AND WORKMEN'S COMPENSATION

Publication of Studies by International Labour Office

THE International Labour Office at Geneva has recently published three valuable reports on the subject of the general problems of Social Insurance, and on compensation for accidents and for occupational diseases. Social insurance was among the subjects selected for special consideration at the Seventh Session of the International Labour Conference, which met last month at Geneva, a beginning being made with compensation for industrial accidents and diseases. In its general sense the term "social insurance" signifies the various measures that may be taken by a community to protect itself against the losses in its health and productive capacity that are incurred through the sufferings of its producers. The principal phases of social insurance, as it has been provided under existing laws in various countries, are accident insurance (workmen's compensation); sickness and maternity insurance; invalidity insurance; old age and death insurance, and unemployment insurance.

General Problems

The report on "The General Problems of Social Insurance" traces the historical development of social insurance, beginning from the introduction of the factory system which resulted in the creation of an immense proletariat. Out of the anarchic social conditions attending the development of large scale industry there gradually emerged a sentiment of solidarity, which forms the basis of the organization of insurance against the risks of industrial life. The report notes that the organization of collective thrift originated with the trade union movement:—

"The connection of the mutual aid society with the trade union, of which it was often the issue, ensured for it indeed the support of trade unionists, but for that very reason its membership was limited to the same circle The basis of the mutual aid society was too narrow to enable insurance to be undertaken against the heavier risks of invalidity and old age; the society had to confine itself to the provision of small benefits in case of illness or unemployment of short duration. Nevertheless, in spite of the precariousness of its early existence the mutual aid movement laid the foundation of an organization in which later on and with the help of the public authorities, the provident fund was to become a securely built insurance organization."

A new conception of the social function of the State was first adopted by Germany, which created an elaborate system of compulsory social insurance between 1883 and 1889, including provision against occupational risks. The report traces the growth of the social insurance, of the German, British and French type, summarizing the different conceptions which underlie legislation throughout the world. The contents of the volume may be indicated by the titles of its main divisions, which are as follows: The Scope of Social Insurance; Benefits under Social Insurance; Financial Resources of Social Insurance; Financial Systems in Social Insurance; Insurance Institutions; and the Problem of the Unification or Co-ordination of Social Insurance.

Workmen's Compensation

The report on "Compensation for Industrial Accidents," a substantial volume of 656 pages, contains a comparative analysis of national laws on this subject. The various legislative systems began with occupations involving particularly serious risks such as mining, navigation, railways, manufacture of explosives, etc. They were then gradually extended to cover industrial and commercial undertakings using mechanical power of one kind or another, and they are now tending more and more to include all industrial, commercial and agricultural undertakings, whatever their size and whatever the nature of the plant which they employ. At the outset, the beneficiaries were mainly manual workers whose wages did not exceed a certain figure; but at the present day, the distinction between manual and non-manual workers is tending to disappear and the wage limit is either rising or has been abolished. Earlier systems of legislation covered only the risk of accident properly so called, and the risk of occupational disease was either omitted or, in many cases, explicitly excluded. However, as the principle of occupational risk demands that compensation should be paid on account of occupational diseases, it is found that legislation is tending to guarantee compensation for occupational diseases in an ever growing number of the systems which deal with industrial accidents.

The report will be found an invaluable source of information for the comparative study of compensation laws. Part I describes the scope of existing laws on the subject of industrial accidents, outlining the growth of modern legislation and the undertakings and

occupations covered. Part II enumerates the risks covered by the various state laws; Part III compares the scales and forms of compensation that are provided; Part IV deals with the guarantees established by law to ensure compensation payments; Part V describes the procedure required for obtaining compensation and settling disputes; and Part VI outlines the position of foreigners under the various national laws. The compensation acts of the various Canadian provinces are fully described, along with those of the other countries of the world, the source of information for Canadian legislation being "Labour Legislation in Canada as existing December 31, 1920," (with annual supplements to 1924) published by the Department of Labour, Ottawa.

Compensation for Occupational Diseases

The third publication presents a comparative analysis of existing national laws which provide for the compensation of occupational diseases. Some countries base their legislation on the principle that as all diseases may be occupational they should be merged in one general category and comprised in a system of consolidated sickness and disablement insurance. Other countries again regard occupational diseases as a risk of industry similar to the accident risk. "It is now generally admitted," the report states, "that workers suffering from occupational diseases should not have to fall back on public and private charity. Moreover, English experience shows that the burden imposed upon industry by insurance for injuries of this nature amounts, at most, to a small percentage of that entailed by industrial accidents. Past experience goes

to show that compulsory compensation by the employer of serious cases of disease definitely traced to unhealthy occupations has two great advantages: in the first place, it offers an inducement to the manufacturer to improve the health conditions in his industry in order to reduce occupational risk, and consequently his insurance premium; in the second place, it calls the workers' attention to dangers which can to a large extent be avoided with their co-operation."

Occupational disease, it is stated elsewhere, is the inevitable outcome of unhealthy work, "but it would not be inevitable if the employer chose, for it is not a vital industrial necessity. It can be avoided, since the causes are even better known than those of accidents, for in disease the determining factor is to be found in the condition of work or in the machine utilized therein." The subject is treated in the report from many sides, the first chapter giving a general statement of the question, and showing the need for compensation for occupational diseases; the succeeding chapters deal with the definition of such diseases, the principles of legislation in respect to them; the responsibility of employers, and the rôle of the doctor in regard to legislation. The legislation of the various nations is analysed, the nations which provide compensation on the lines of accident insurance being in one group (British Empire, France, Spain, Greece, Italy, Portugal, Serb-Croat-Slovene Kingdom, United States, Mexico, Ecuador, Argentina, Brazil, Japan) and those whose compensation is on the lines of sickness insurance being in another group (Germany, Austria, Hungary and Luxembourg).

International Industrial Welfare Congress

An International Industrial Welfare (Personnel) Congress is being held this month at Flushing, Holland. Canada is not represented at this meeting but the officials of the Congress, in a letter to Mr. Tom Moore, president of the Trades and Labour Congress of Canada, express the hope that a more representative Congress will be held within the next two or three years. The chairman of this year's congress is Mlle. Diemer of France, and the honorary secretaries are Miss M. L. Fledderus, of Holland, and Miss E. Brenda Voysey of England. The programme includes lectures and discussions on the following subjects: Stage of Development of Industrial Welfare (Personnel) Work in each country represented; Internationalism; Industrial Law in Relation to Welfare Work; The Industrial Problem of the Far East; Employee Representation; Employment Management as a Condition of and Means to Efficiency; Vocational

Selection; Industrial Fatigue; The Individual in Industry; Social Progress; Existing Schemes of Training for Industrial Welfare Work and Future Lines of Development of Schemes of Training.

The international development of the industrial welfare or personnel movement was outlined in a publication of the International Labour Office (Geneva) in 1922. In that year the first international meeting was held, in Normandy, about 50 persons attending, including representatives of America, Belgium, China, France, Great Britain, Holland, India, Sweden, and Switzerland. It is stated that "though the Anglo-Saxon countries seem to be as yet the only ones where welfare work is firmly established in industry, the work has been taken up spontaneously by firms in different countries all over the world and is developing very much on the same lines."

WIDOWS', ORPHANS', AND OLD AGE CONTRIBUTORY PENSIONS IN GREAT BRITAIN

THE British Chancellor of the Exchequer, in his recent budget speech, outlined a proposed contributory scheme for widows' and orphans' old age pensions. Subsequently, the Minister of Health introduced in the House of Commons, a bill "to make provision for pensions for widows, orphans, and persons between the ages of 65 and 70, and for the payment of contributions in respect thereof; and to amend the enactments relating to health and unemployment insurance and old age pensions."

In an explanatory memorandum prepared by the Ministry of Health it is stated that the object of the bill is to extend the social services provided for the working population by adding to the existing schemes of health insurance, unemployment insurance, and workmen's compensation, a scheme of,—

- (a) pensions for widows and dependent children, and
- (b) old age pensions commencing at the age of 65 instead of 70, and passing, on the attainment of the age of 70, into pensions under the Old Age Pensions Acts, freed from the restrictions and disqualifications at present applied to such pensions.

The bill, which extends to Great Britain, provides for the establishment of the new scheme on a contributory and compulsory basis, interlocked with the present scheme of health insurance. The beneficiaries are the survivors of members of the working population insured under the scheme in Great Britain, who now number approximately 15,000,000 persons. A person who hereafter ceases to be compulsorily insurable on leaving employment, or who has already ceased to be insured before the inception of the new scheme, may continue in or may resume insurance as a voluntary contributor at the full rate of contribution ordinarily payable by employer and employee jointly. Thus all members of the community who at some time in their lives pass through a substantial period of insurable employment (not less than two years) will have an opportunity of taking advantage of the scheme. The voluntary contributor, like the employed contributor, must be insured both for health insurance and for pensions.

Certain classes of persons (persons in "excepted" employment, such as school teachers, employees of local authorities, the salaried staffs of railway companies, and others) will continue to be excepted from health insurance,

but will, if the rate of their remuneration does not exceed £250 a year, be required to be insured for widows', orphans', and old age pensions, except so far as it is proved that the terms of their employment provide for them and their dependants benefits corresponding to the pensions provided.

Benefits

The Bill provides that pensions shall be payable to the following classes of persons at the following rates:—

(a) *Widows' Pensions*.—10s. a week for the widow of an insured man who dies after the date of the commencement of the scheme and was under 70 years of age at that date, with an additional allowance for children up to the age of 14, at the rates of 5s. a week for the eldest child and 3s. a week for each of the other children. The pension to the widow is payable until she attains the age of 70 or remarries. Her remarriage will not affect the children's allowance, which will continue to be payable on the terms stated above. If the widow dies leaving a child or children under the age of 14, such children will, until they reach the age of 14, receive an orphan's pension at the rates shown in (b) below.

In all cases where there is more than one child, the eldest under 14 succeeds to the 5s. allowance.

If the widow is over 70 at the death of her husband and is not already in receipt of an old age pension, the Bill provides that she shall on his death become entitled to an old age pension under the Old Age Pensions Acts, 1908 to 1924, without the application of the tests as to means, residence and nationality required by those Acts.

(b) *Orphans' Pensions*.—7s. 6d. a week for the eldest child, and 6s. a week for each of the younger children (up to the age of 14 in each case), of an insured man, being a married man or a widower, or of an insured widow.

(c) *Old Age Pensions*.—10s. a week to insured men and insured women between the ages of 65 and 70, and 10s. a week to the wives between the ages of 65 and 70 of insured men who are themselves entitled to pensions. If the wife is over 70 when her husband becomes entitled to an old age pension under the scheme it is provided that she shall receive an old age pension under the Old Age Pensions Acts, 1908 to 1924, without the application of the means, residence and nationality tests.

Special provisions are made, under various Clauses, for the dependants of persons who

died before the commencement of the scheme, and for persons who cannot qualify for old age pensions under the scheme because they have attained the age of 70 before 2nd January, 1928.

Dates of Commencement

The provisions as to pensions to widows and orphans will commence from 4th January, 1926. The provisions as to unrestricted old age pensions (i.e., pensions freed from the restrictions and disqualifications existing under the present Old Age Pensions Acts), awarded to or in respect of persons over 70 on the 2nd July, 1926, or who attain the age of 70 between 2nd July, 1926, and 2nd January, 1928, will commence from 2nd July, 1926. The provisions as to other old age pensions will commence from 2nd January, 1928.

Contributions

The ordinary rates of contribution, commencing from the 4th January, 1926, will be 9d. for a man (of which 4½d. will be payable by the employer and 4½d. by the employee) and 4½d. for a woman (of which 2½d. will be payable by the employer and 2d. by the employee). As a result, however, of the reduction of the health insurance age from 70 to 65, the health insurance contribution is being reduced by 1d. a week in the case of men and ½d. a week in the case of women, so that the net increase consequent on the scheme in the weekly contributions payable in respect of employed persons is 8d. for a man and 4d. for a woman, divided equally between employer and employee. Lower rates of contribution are applicable to exempt persons and, in certain circumstances, to excepted persons.

The contributions in respect of an insured person under the scheme and under the National Health Insurance Act will be payable as one contribution, and all the arrangements under the latter Act for the payment and collection of contributions will apply automatically to the contributions under the scheme.

Amendments of Health and Unemployment Insurance Acts

The Bill amends the National Health Insurance Act in various particulars. The principal amendments of the Unemployment Insurance Acts consequent on the scheme are:—

(i) Contributions and benefits will cease to be payable by and to an insured person at the age of 65.

(ii) No contribution will be payable by an employed person of the age of 65 and upwards, but the employer's share of the weekly contribution will continue to be payable in respect of him.

The amendments under this heading take effect from 2nd January, 1928.

A Schedule appended to the Memorandum shows, in summarized form, the provision made by the Bill for insured persons, for the wives, widows, and children of insured men, and for the children of insured widows.

Government Actuary's Report

In a Report by the Government Actuary on the Financial Provisions of the Bill it is stated that the estimated numbers of employed persons under the age of 65 coming into insurance at the beginning of the scheme are 10,170,000 men and 4,595,000 women. These numbers will increase until about the year 1960, when the estimated numbers are 11,671,000 men and 4,842,000 women. From that time onwards some reduction in the insured population between the ages of 16 and 65 is indicated by the Actuary's calculations.

In addition it is estimated that there will be 275,000 men and 50,000 women employed contributors between the ages of 65 and 70 in January, 1926, in respect of whom contributions will be payable during the years 1926 and 1927, so long as they are in insurable employment and still under 70. This makes a total of 15,090,000 employed persons (10,445,000 men and 4,645,000 women) brought in as contributors at the outset.

The estimated numbers of beneficiaries under the Acts, at various dates, are shown in a Table in the Report, of which the following is an abridged summary:—

—	1925-6	1928-9	1935-6	1945-6	1965-6
	(000's)	(000's)	(000's)	(000's)	(000's)
<i>Non-contributory cases*—</i>					
Widows.....	196	142	32
Children.....	386	248	33
<i>Contributory cases—</i>					
Widows.....	10	177	575	980	1,305
Children.....	8	129	360	464	406
Men aged 65-70.....	332	428	507	529
Women aged 65-70.....	160	241	301	297
Total.....	600	1,188	1,669	2,252	2,537

Another Table in the Report shows the estimated expenditure and the estimated contributions under the Bill. The following is an abridged summary of this Table:—

—	Total Expenditure (including Administration, but excluding Pensions to Persons over 70)	Contributions
	Million £	Million £
1925-6.....	2.7	4.5
1928-9 (first complete year).....	25.6	22.9
1935-6.....	38.4	25.5
1945-6.....	52.3	32.0
1955-6.....	57.7	38.4
1965-6.....	60.8	42.7

*These are existing widows or children, whose husbands or fathers were insurable.

INDUSTRIAL ACCIDENT PREVENTION ASSOCIATIONS

Safety Convention at Toronto, Ontario

THE annual "safety convention," of "Industrial Accident Prevention Associations," an incorporated body authorized under the Workmen's Compensation Act of Ontario, was held at Toronto during May. The attendance indicated a marked increase of public interest in the subject of industrial safety, 530 delegates coming from sixty cities and towns, an increase of 30 per cent over the attendance at last year's convention. The growth in numbers, however, was less than the increase in enthusiasm and interest shown by those who attended.

The objects of the Industrial Accident Prevention Associations are as follows:—(a) To co-ordinate the activities of the various safety associations comprising the membership, so that the work may be done with the greatest efficiency at a minimum cost. (b) To co-operate with employers and employees in safety work and in a general safety campaign to reduce accidents and industrial disease, for the benefit of both employer and employee. (c) To make rules for the prevention of accidents and industrial disease, such rules to be binding upon employers in the various classes comprising the membership when approved by the Workmen's Compensation Board and the Lieutenant-Governor-in-Council. (d) Generally to do such things as may reduce losses due to accidents, including matters authorized at any special or general meeting of the Association.

Mr. George Valentine, the General Chairman, in his opening address, referred to the time that had been freely devoted by the directors to the work during the past year. "I am sure you will agree with me," he said, "that the question of Accident Prevention is a most important one, not only to the manufacturers but to the community at large. While naturally the manufacturers desire to see, and are benefited by, a reduction in accident costs, the benefit to the employee, whose life or limb has been saved by accident prevention work is even greater. As often pointed out, there is a humanitarian side as well as a financial side to this work, and the former is by no means the lesser part."

Annual Report

Mr. R. B. Morley, general manager of Industrial Accident Prevention Associations presented the annual report of the organization. He said that the Associations were authorized and received grants for maintenance under

Section 101 of the Workmen's Compensation Act. His report showed that the inspection staff consists of a Chief Inspector and eight inspectors and that, in the past year, 6,471 inspections had been made and, in addition, a large number of special visits and follow-up calls. The inspectors were carrying on their work under the general rules and standards of the Associations which had been approved by the Workmen's Compensation Board and the Lieutenant-Governor in Council, and were enforceable if necessary. The directors had taken as the key-note of the campaign "Education and Co-operation rather than Legislation and Compulsion."

The report told of a number of safety meetings held by the inspectors and of the distribution of safety literature including bulletins, pay envelope inserts, safety calendars and special leaflets to nearly 7,500 employers included in the membership of the Associations. "I do not suggest to you" said Mr. Morley "that bulletins are a cure-all for accidents, but I do say that good safety literature, intelligently posted or distributed, will assist materially in cutting down accidents in any plant."

One very interesting feature of the report was the statement that in 1923 there were 15,526 accidents involving compensation payments direct to the injured workers in the classes included in the membership of the Industrial Accident Prevention Associations and that, in 1924, there were 11,924, which was considered a worth-while decrease. Accidents in Ontario were decreasing in both frequency and severity. The classes federated in the Industrial Accident Prevention Associations are Nos. 3, 4, 5, 7, 8, 9, 10, 11, 12, 14, 15, 16, 17, 18 and 19 which represent nearly seventy per cent of the pay-roll under compensation in Schedule 1 in Ontario. Ninety-two meetings of the directors of the various class associations had been held and other meetings had also taken place. Close contact existed between the organization and the Workmen's Compensation Board. He paid tribute to the work done by the staff of the Industrial Accident Prevention Associations.

Address by Mr. Tom Moore

Mr. Tom Moore, President of the Trades and Labour Congress of Canada, addressing the Convention said "When I promised to speak on Labour and Accident Prevention I little thought that I was going to meet such an inspiring gathering as we see here to-day.

As I looked into your faces I recalled a statement heard recently in Quebec where, as you probably know, organized labour has attempted to secure a State compensation act somewhat similar to that in Ontario. One of the speakers opposing the suggestion said that the introduction of compensation would lead to a slackening off in efforts to prevent accidents. I think this gathering is a complete refutation of that statement." Mr. Moore joined with others in expressing regret that Mr. S. Price, Chairman of the Workmen's Compensation Board, had found it necessary to tender his resignation to the Government, adding that Mr. Price had guided the efforts of the Board through ten difficult years and that both employer and worker could join whole heartedly in a tribute to his fair and efficient administration.

"It has been said that accident prevention is a business proposition," said Mr. Moore "It surely is a business proposition whether we look at it from a humanitarian standpoint or an economic standpoint. The humanitarian side should not be mixed with a moral uplift or anything of that kind. I feel sure that the importance of this subject is not confined to labour alone and my remarks will be on a little broader line than dealing with it as it affects labour."

Mr. Moore quoted from the first number of the Accident Prevention Survey of the International Labour Office at Geneva, showing that every year tens of thousands of workers were killed in the exercise of their occupations, that hundreds of thousands were crippled for life, and that industrial accidents were in all countries one of the most pitiless scourges of the working classes. He dwelt on the situation of the injured worker without compensation and pointed out the very considerable advantages of the Workmen's Compensation Act to any community. During 1924, 58,675 accidents were reported to the Workmen's Compensation Board, and in the past four years about a quarter of a million accidents were reported. This meant a great economic loss in one province and it was a loss that could be materially reduced by efficient safety work.

"The elimination of accidents in industry," said Mr. Moore, "is a matter that has been engaging the attention not only of these Associations, but of many people not directly affected and not directly connected with Associations of this nature. To them we owe perhaps much of the progress that has been made in preventing accidents. It may be that in some instances the profit incentive was present, but that does not detract from the value of their work. As I glance around this room

and see the exhibition of appliances having for their purpose the elimination of accidents, I think we can recognize that although the manufacturers of these appliances may not be directly affected by accidents themselves, they are doing almost as valuable work in using their ingenuity for the construction and manufacture of these articles as the medical men are doing in the prevention of disease." Mr. Moore referred to the popular fallacy that industrial accidents involve contact with machinery. He quoted from statistics published by the U.S. Steel Corporation classifying the cause of 200,000 accidents, showing that only 8.83 per cent were caused by machinery or properly classed as machinery accidents. This, brought out the necessity for individual carefulness, this carefulness to relate both to the worker himself and to his fellow workers.

Legislation had been a potent factor in accident prevention, as certain enactments had laid down standards for the guidance of employers of labour and in this way had materially assisted in improving conditions. Referring to Workmen's Compensation Acts Mr. Moore said "The primary motive in asking for such acts was naturally to secure some compensation to meet the charges which a worker incurs during periods when he is off work through accidents or to provide for the maintenance of his dependents when the accident happened to be fatal. But there was also in the minds of the workers the further thought that an Act of that particular kind would so concentrate opinion on the seriousness of these accidents that it would of itself bring some measure of effort outside of the labour forces and outside of the work of individual employers for the elimination of industrial accidents. The collection of authentic statistics by Compensation Boards had helped to concentrate public opinion on this question and provided authentic information as to the volume of industrial accidents. When that volume became known the realization of the colossal cost followed and immediately after that came the realization of the necessity for accident prevention. He declared that the Workmen's Compensation Board had justified its existence in that alone.

Referring to the work being done by the Industrial Accident Prevention Associations, Mr. Moore said: "To that work you are devoted at the present time, labour is devoted at all times, and you, I believe, will be devoted at all times. Without overburdening the word 'co-operation' let me say that there is a force that has not yet been fully utilized for co-operation towards accident prevention. In many directions valuable work has been done by shop councils, by calling the men into coun-

oil and instead of posting the bulletin 'Thou shalt not,' leaving it to the men to say 'We will not.' Much has been done in that direction, and it is a valuable direction to pursue."

Permanent Disabilities under Workmen's Compensation

Mr. Samuel Price, K.C., chairman of the Workmen's Compensation Board of Ontario, discussed the subject of permanent disabilities, pointing out that permanent disability cases under the Act were responsible for nearly half the total accident cost, though comprising less than five per cent of all cases. The less than one per cent of death cases cost less than a quarter of the total accident cost; the 54 per cent of temporary disability cases cost more than a quarter of the whole; while the 40 per cent in which no compensation but medical aid only was payable cost two per cent.

He explained and illustrated the Board's handling of permanent disability cases and the amount of benefits provided. A workman earning \$30 a week, for instance, losing his right arm at the elbow would be paid \$20 a week while laid up, all necessary medical, hospital, and nursing services would be paid for, he would be provided with an artificial arm, and he would then be awarded a pension of \$52 a month for life, in addition to a small lump sum of \$100 to \$150 to give him a new start. In making up the cost of the accident the pension is capitalized on an actuarial basis, the whole cost of the accident in this case amounting to \$10,437. The allowances and the cost would vary in cases of higher or lower wages, and the capitalized value and the cost would also vary according to the age of the injured workman, the probable period during which the pension would have to be paid depending upon the age. These capitalized values go into what is called the Pension Fund, the aim being always to keep this fund just sufficient to pay all existing pension liabilities.

The cost of permanent disability cases varies all the way from \$150 or so for the loss of part of a finger, to a maximum of \$25,000 for permanent total disability. The vast majority of permanent injuries are comparatively slight, there being only 30 total disability cases during the year 1923, by far the greater number being finger or thumb injuries, 739 out of the total of 2,340 permanent disability cases for the year being injuries to a single finger. Injuries to the upper limbs are far more frequent than injuries to the lower limbs, 1,477 being of this character, while only 356 were injuries to some part of the lower limbs, while 423 were injuries to some part of the head, including eyes and teeth. There

were 217 permanent eye injuries during the year, 4 of these being total disability cases, and 122 over 10 per cent disability. Blood poisoning played a large part in the situation, the seriousness of the case being due to this in over nine per cent of all the cases, and 15 deaths during the year 1923 being due to this cause.

At the average age and wage, namely 34 years and \$23.32, the cost of a permanent total disability case is \$13,776; loss of arm at shoulder \$9,582; hand \$5,176; thumb \$1,311; forefinger \$587; ring finger \$393; leg at thigh \$11,746; leg at knee \$7,224; foot at ankle \$4,679; loss of one eye \$2,550. Loss of both eyes, both arms or both legs is always regarded as total disability. The average cost of all permanent disability cases was \$1,147, of which \$1,035 was compensation and \$112 medical aid, the medical aid in permanent disability cases averaging 10 per cent of the total cost, while in all compensation cases it averaged 17 per cent of the total.

"It is very agreeable," Mr. Price said, "to be able to say that there has been a general decrease of late years in the frequency of both permanent disability and, generally speaking, death cases—in other words a falling off of the severer accidents—though on the other hand there is an increase in the reporting of smaller accidents, there being many more medical aid only cases and a few more temporary disability cases reported than formerly. This latter tendency also obtains under compensation acts elsewhere. We have had not only a proportionate decrease in permanent injuries as compared with other kinds of cases but also an absolute decrease in their frequency in relation to the number of workers, the frequency of permanent disability accidents dropping from .68 for every 100 full year workers in 1919 to .51 in 1923."

Mr. Price compared the Ontario benefits to men permanently injured with those in the United States. Most of the States pay permanent disability benefits not during disability or the time of probable need, but for a certain number of weeks, averaging a maximum of about six years in permanent partial disabilities, and about ten years in permanent total cases; and the payments in the majority of the States are also curtailed by maximum totals running from \$3,000 to \$10,000 in permanent total disability cases and from \$1,500 to \$6,240 in permanent partial cases. Only three of the 46 States with compensation laws, including the Federal Government, pay permanent partial disability during life without limitation. Thus a man losing a leg or an arm in Pennsylvania is paid for only 300 weeks or in Ohio only to the extent of \$3,750 and is

then left, perhaps in his old age and when he most needs help, to shift for himself.

The laws of most of the Canadian Provinces are more adequate in this respect, following the Ontario system of life pensions, though in none of them except Manitoba is the percentage as liberal as in Ontario, and in Manitoba the death benefits are a little less than in Ontario. In percentage of wages, 12 of the United States laws pay 66½ per cent like Ontario and Manitoba; 4 pay 65 per cent; 8, 60 per cent; 3, 55 per cent; and 17, 50 per cent, but these percentages are curtailed by weekly maximums, only 7 allowing as high as \$20 a week, as compared with our maximum of \$25.64 a week, and 6, including the great industrial State of Pennsylvania having a maximum of only \$12 a week—slightly less than our minimum of \$12.50. The British Columbia and Alberta maximum is \$24.04 a week, New Brunswick is \$15.87, and Nova Scotia \$12.69. "Some may think," said Mr. Price, "that our benefits run very high. They do, but I think they are not too high. It is in the severe permanent injuries that compensation is most needed, and United States writers themselves voice the criticism that in most cases their serious permanent injuries are grossly undercompensated." Perhaps some will also think because of the benefits paid in Ontario the Ontario rates might be very high in comparison with other places. The reverse is the fact. The rate manuals need only be looked at to see this, and the reason is that nearly the whole of what the employers pay in Ontario goes to the workman, the expenses and overhead being only 4 per cent of the benefits, while in Pennsylvania, for instance, the expenses and overhead and profits amount to 128 per cent of the benefits paid, and the employers and workmen in Ontario are not now spending their money and wasting their time in litigation. All this I have often repeated before, but it goes to the root of our system and there is no answer to it. Properly administered, I believe our compensation system is the best that can be devised, not only for one but for both parties, and everyone interested should try to see that its integrity and advantages are maintained and continued. One advantage is the immediate reduction of assessments that diminution of accidents causes, and there is the financial benefit as well as the higher humanitarian appeal to encourage accident prevention. Though it may sometimes seem tedious, progress is undoubtedly being made. More attention is being paid to accident prevention now than formerly, and the attendance and proceedings at this Convention betoken the earnest efforts that are being devoted to this work."

Management's Responsibility for Safeguarding the Man

Mr. S. R. Parsons, president of the British American Oil Company Limited, and past president of the Canadian Manufacturers' Association, spoke of the various ways in which plant and machinery are safeguarded. Many employers he said were proud of exhibiting their power houses and factories and the fine working condition of machines adapted to the work in hand, but, comparatively few would point with equal pride to what was of vastly more importance than units of plant, namely the men without whom the machinery would be of little use. The expense involved in accident prevention, sanitation, and general working conditions was negligible when put up against the value of human life. They might paraphrase the words of the great Teacher and say, "How much, then, is a man of more value than a machine." There was the dawn of a new day in our industrial life, and it would be well to take heed to it.

All agreed, he said, that no business can be greater than its management. "We may have plenty of capital on the one hand, and plenty of labour on the other, but unless these two essentials are brought together by proper management there will be nothing but failure. It is the business of management to conserve both capital and labour, and this can be done so far as labour is concerned without being mushy or sentimental. While the man who is a "dead one" cannot expect a living wage, yet, on the other hand, we have no right to assess the value of human labour at the poverty line. If the management is solely concerned with profits, can we wonder that the men are solely concerned with their pay envelope? All sorts of doctrines are proclaimed and influences used to alienate the employee from his employer and the work in which he is engaged. If employers want to win out they will have to show a greater interest in those by whom they are surrounded. Just as a human body cannot do its best work unless the integral parts are acting together, so in our great industrial system there must be a living spirit of working together in order to complete service. The employer should take the lead in trying to bring about such conditions."

Mr. Parsons referred to conditions prevailing in the seventeenth century when there was a glory and pride in trade and craft which has been largely lost out of our industrial life. Instead of the small shop with few workers, the employer among them, there had come about the great factory with many hands, where employer and employee hardly know each other. Machinery and the big factory were here to stay, but some plan should be devised which will bring about a spirit of good-

will and hearty co-operation. Many plans and schemes were in operation in Great Britain and on this continent. No plan, however, was applicable alike to all industries. Each unit must make its own plan to suit its special conditions. Absolute honesty and sincerity on the part of management is a *sine qua non* of success. It was a hopeful sign that on this continent there were about one thousand organizations under one plan and another working in individual units of industry, and that about one million and a quarter employees were enrolled thereunder. There had been continuous growth in this direction from the year 1917 forward. The main principle involved in all these organizations was that employer and employees were equally represented by men of their own choosing on a committee dealing with matters in which the workers themselves were particularly interested, such as wages, hours and conditions of work, employment and discharge, benefit and insurance funds, etc., etc. Thus there was the finest possible form of collective bargaining within the plant by representatives who are familiar with all conditions. Industrial peace was possible only through industrial disarmament and the hitherto opposing interests coming together for mutual intercourse and for mutual benefit. A house divided against itself could not stand.

Mr. Parsons by request gave a summary of the workings of his company under the co-operative committee plan adopted a number of years ago and which has proved very satisfactory alike to the company and the men. He further outlined the employees' stock subscription plan in force, and stated in this connection that large corporations were often condemned by labour agitators, but when properly conducted this was the nearest form of democracy possible.

Industrial Safety

Mr. F. M. Morton of the International Harvester Company at Hamilton gave a practical paper on "Industrial Safety" in which he told a story of the work being done in the various Harvester plants in this country and the United States. He said: "One outstanding and indeed important thing that has helped us gradually to improve our accident record is willingness of all concerned to co-operate. I mean intelligent and helpful co-operation between the management and the employees at large in our joint efforts to avoid accidents. That same spirit of willingness to co-operate which is so essential to the success of any business is, I will venture to say, exactly what brings us all together at this Convention, that we may, by exchanging experience and through open-minded discussion, gain a better understanding of our mutual problems."

The three fundamentals and governing principles of industrial safety are organization, safeguarding and education. Organization in turn might be classed under three headings: management, foremen and employees. "The management's job is to provide safe working tools and conditions, to adopt policies and regulations in the interests of accident prevention and to see that they are carried out. The foreman's job is to instruct the new man not only how to do his work efficiently but safely and to keep an eye on the older men. The foreman being the foremost and the keyman of his department is held responsible for accidents occurring in his department. The employee's job is to obey instructions, practice safe operation of the job and look out for the safety of others. Theoretically, this combination should prevent accidents but it is perhaps well for us to be reminded again that the problem that we are dealing with is the human problem and as such calls for eternal vigilance if accidents are to be kept down to a minimum."

Dealing with safeguarding, he said: "Mechanical safeguards on machinery, equipment and buildings are essential but their use must be reasonable and practical. For many years all of our plants have been concentrated on mechanical safeguarding and our experience indicates that we are reasonably safe in this respect. The combined experience of all of the plants of the Harvester Company shows that less than 20 per cent of all of the accidents occurring might have been prevented through mechanical safeguarding. Therefore, some other effective means must be found for combating 80 per cent of our lost time accident cases."

The speaker dwelt at some length on the educational side of accident prevention, showing the necessity for safety education of all ranks. He stated that all employees were cautioned when placed on new jobs or when transferred to another machine or job, that personal "follow-up" on the part of foremen and assistant foremen was carried out, that safety literature was posted on bulletin boards in each department and that safety literature generally was distributed in such a manner as to interest all employees in safety. "It, of course, takes a great deal longer to accomplish these things than it does to tell about them but the first step taken, the influence of an enthusiastic and interested foreman, can go a long way towards getting the workman to realize his individual responsibility in this matter of protecting himself and others." He cited instances of no-accident records in various plants of his Company and dwelt particularly on the rather remark-

able achievement of the Chatham Works with an average employment of over 100 workers in 1924. This plant manufactures waggons; it operated through the whole of last year without a single accident. Referring to the use of safety goggles he said that the chief safety inspector of the Harvester plant had informed him that in the first three months of 1925 twenty eyes were saved in all of the company's plants through the use of safety goggles and that in his own plant at Hamilton five eyes had been saved in 1924. He showed some of the safety goggles that had been responsible for safe eyes, one of these being worn by a man who had already lost the sight of one eye and whose other eye was undoubtedly saved through the safety goggles.

Tribute to Ontario Act

Mr. H. W. Macdonnell, who is in charge of the Industrial Relations Department of the Canadian Manufacturers' Association, referred to the relations between accident prevention and the compulsory mutual insurance system of workmen's compensation in Ontario. "The Ontario Act came into force at the beginning of 1915," he said, "and you are probably all aware that the benefits under that Act are the most generous on the Continent, indeed in the whole world. Owing to the excellent administration under the very able chairmanship of Mr. Price, the assessments levied on employers are, taking them as a whole, lower than in any jurisdiction under similar legislation." He referred to the loss that manufacturers in Ontario would sustain when Mr. Price's resignation as chairman of the Workmen's Compensation Board took effect, and expressed the hope that Mr. Price's successor would continue the administration along the same conscientious and able lines. He also spoke of the relationship of accident prevention to compulsory state insurance, remarking that one of the arguments advanced against a state system was that it was bound to fall down in respect of accident prevention. However, the attendance at the Convention was ample to refute this argument in Ontario at least.

Hazards of the Woodworking Plant

Mr. W. C. Laidlaw of the R. Laidlaw Lumber Co. Limited, and former general chairman of the Association, in a paper on hazards of the woodworking industry, said that woodworking was and would undoubtedly continue to be rated as extra hazardous in comparison with many other lines of industry for obvious reasons. He pointed out that powerful high speed drives are essential, that the machine output is limited in most cases by the ability

of the operator and that the hazards at the point of operation are continuous and not intermittent as in many other types of machine tool. "Accidents in the main are the logical result of certain definite causes and when these causes are known and fully appreciated, preventive measures may be taken. If the management is convinced that most accidents are preventable, results are assured."

Different authorities placed the human element as the contributing cause of between 65 per cent and 95 per cent of industrial injuries. "If human beings could be adjusted to the same regularity of motion and certainty of timing as the well designed machine" he said, "the great majority of accidents would never occur. The first problem and the most important one is that of developing means which will eliminate the uncertainty of the human factor. Let me stress this point. As employers registered and responsible under the Workmen's Compensation Act, we must accept most of the responsibility for the safety of our employees. The good judgment of the executive then will consider the extra hazard of the youthful, the elderly, the new, the unskilled, the thoughtless, the overwilling, the indifferent and the careless types and will see the degree and manner of supervision is adjusted to suit the particular case."

Dealing with the question of safeguarding of plants, Mr. Laidlaw placed special stress on the need for guarding belting, shafting and other plant equipment. He pointed out the desirability of "good housekeeping" in any plant and said that lighting and ventilation should be adequate. He referred particularly to the circular saw, saying that many good guards are now available and effective for the great majority of cross cut and ripping operations. He dealt with the necessity for safe practices in the shop and said that operators should never be permitted to work in line with the saw as kick backs from saws were often fatal. The Associations were willing and anxious to assist in all problems relating to improved conditions in woodworking plants in Ontario.

Guarded Punch Presses

Mr. G. F. Orders, of the American Can Company at Hamilton, said that his company had early recognized the importance of guarding press dies and that every effort had been made to make all press operations as safe as possible. "Human sentiments were stimulated" he said "by emphasizing the moral responsibility of each foreman for the safety of the employees in his charge." Some years ago they had found their accident costs steadily rising and the efficiency of employees

being reduced through accidents. This had been responsible for the creation of a safety department about ten years ago, when a start was made on the development of the best possible die guard as a standard article of equipment in every press room of the company.

"For each class of work" said Mr. Orders "with single acting presses, we consider the enclosed cage guard as the ideal type. No accident has ever occurred on dies fitted with this guard and it is impossible for an accident to occur with a die so fitted. It is now three years since an operator in our press room lost a portion of her finger and that occurred on non-standard press fitted with an old style guard." He said that operators no longer offered objection to guards as the guard was not an innovation but was now part of every die in the plant and he believed it would be difficult to induce an operator to run a press in which the die was not adequately guarded.

Power Press Guards

Mr. V. L. Mummery, Chief Inspector of the Industrial Accident Prevention Associations in an address on power press guards, said that possibly the use of no other machine had been so broadened and extended as the power press. In common with most machines looking to high production, the greatest source of accident was the point of operation. In considering the usual type of punch press it was found that most operations consisted in placing the stock in position by hand, tripping the press by foot and removing the scrap or stock after which the operation was repeated many times over. Sixty strokes per minute were not uncommon and in many cases the machine could

be run at considerably higher speed, although this often would not be desirable as the operator could not maintain the same speed.

Human failure under such conditions was liable to be fairly high, as when an employee allowed his mind to wander from the work in hand he was very liable to an accident. "Many punch press jobs" he said "can be guarded by erecting shields or fences around the dies so designed that the stock will pass underneath, but with opening restricted so that the fingers cannot reach the point of hazard. Automatic feed devices of the roll or dial types will often solve the problem. Air or spring ejectors not only reduce the hazard but usually increase production. Slide and chute feeds are of great value and will handle a wide variety of work when properly designed."

No one guard would protect two classes of work and that for this reason each job presented its own problem. Great care should be used in the design of dies, and all unnecessary metal on dies, punches and strippers should be cut away to give ample clearance for the hands of the operator. "No person" he said "should be permitted to operate a power press machine unless he or she has received careful instructions in safe methods."

Officers Elected

The officers elected for the ensuing year were as follows:—

Chairman, Mr. J. C. Callaghan, of the Steel Company, of Hamilton.

First Vice-Chairman, Mr. A. O. T. Beardmore.

Second Vice-Chairman, Mr. W. S. Campbell, of the Canadian General Electric Company.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Canada to participate in Fourth International Medical Congress

THE Fourth International Medical Congress of Industrial Accidents and Diseases will be held at Amsterdam from September 7 to 12, this being the first Congress since the war. Well known authorities in the field of industrial diseases and accidents will read papers. The honorary secretary of the British Committee of the Congress, in a letter addressed to Dr. J. J. R. Macleod, of Toronto University, which was recently forwarded to the Department of Labour from the Ontario Department of Health, states that Canada is to be included in the scope of the committee's work, and that the British party will leave London for Holland on September 6.

The preliminary programme of the Congress includes the following subjects: accidents

and diseases from the medical point of view; diagnosis and outline of occupational diseases; accidents and diseases from the medical legal point of view; re-instatement of permanently and partially disabled workmen; accidents and tuberculosis; the achievement of industrial legislation and hygiene; debate regarding trauma and tuberculosis; treatment of wounds with special reference to sutures; osteosynthesis (fractures); settlement by lump sum regarding small claims; traumatic affections of joints; abdominal injuries; fatigue; pneumoconiosis; work in overheated and damp atmospheres; gas poisoning; nervous and mental diseases; the choice of occupation or trade; eye affections.

The countries taking part in the programme include: Great Britain, France, Holland, Germany, Switzerland, Czecho-Slovakia, Russia,

and Scandinavia. Further information may be obtained from the honorary secretary of the British Committee, Dr. Herman S. W. Menko, 2 Grosvenor Gardens, Cricklewood, London, England.

Methods of Safety Education in Industry

The Industrial Safety Survey, published at Geneva by the International Labour Office (LABOUR GAZETTE, May, 1925, page 482) contains in its first issue an account of the various methods in use in the United States for furthering safety education in industry. "The Americans," it is stated, "date the beginning of their safety work from 1908. The problem was energetically attacked after public opinion had been stirred in 1907 by two unprecedented mining accidents in which 600 people lost their lives. The practical American, considering the statistics of the causes of accidents with an unbiased mind, soon recognized the comparatively slight efficacy of material safeguards and immediately undertook, what had never been tried before, to reduce the above mentioned 75 per cent of accidents by training the workers in safe methods of work".

The first place among safety organizations is given to the National Safety Council. The membership of this body includes, besides a large number of manufacturers, State authorities for workmen's compensation and accident prevention and many municipalities and insurance companies; a number of Canadian firms and organizations being included. The Council has not only succeeded in arousing a widespread conviction of the need of accident prevention and winning real respect through the country for its motto "Safety First," but also, by constant exchange of opinion between its members, especially through its monthly periodical, the *National Safety News*, has done much to develop and extend the best methods of preventing accidents and has acquired a decisive influence in their application.

The organization of safety work is based on the principle that the great majority of accidents can be prevented only through an organized educational effort to reach every worker, foreman, superintendent, and executive, and this educational effort, it is claimed, must be made in every individual undertaking. The following are some of the suggestions for safety organization based on opinions obtained by the National Safety Council:—

The Management.—The superintendents and managers of an industry must first be convinced of the need of safety work, since they in turn are responsible for winning the co-

operation of foremen and workers. Without the whole-hearted support of the management it is impossible for the safety engineer and committees to do effective work. Experience, it is stated, has shown that the committees appreciate recognition of their work if only by a courteous letter. The management should see that meetings are held regularly, that members of the committee are given minutes of the meetings, and that technical training is provided by the distribution and discussion of suitable literature, etc.

The Safety Engineer.—Really adequate inspection cannot be carried out by State officials or the inspectors of accident insurance companies, and manufacturers are therefore expected to provide for the necessary inspection themselves. Frequently the work of a safety engineer is not sufficient to take one man's whole time, and in small undertakings he may even be chiefly engaged in other occupations, but even the smallest firm is expected expressly to designate a suitable person as safety engineer, and the person thus appointed must place his duties in this capacity before all his other work. His title may according to the size of the concern be safety engineer, safety inspector or safety manager, but in any case he is responsible for all safety work and must be convinced of the possibility of success. It is also recommended that safety engineers be given an opportunity to gain experience by visiting other undertakings, attending congresses, etc.

Safety Committee.—These committees may either consist of the officials and foremen concerned, in which case they are usually responsible for actually carrying out safety measures, or they may be intended to act as a link between the management and the workers, to pass on suggestions, or also to carry on safety propaganda, and are then composed of foremen and workers or of workers only. About 90 per cent of the workers' suggestions can be used. The committees can be effective only under certain conditions and within specified limits, but subject to these limitations they are very useful in the organization of safety work. As a rule, members of the committee are appointed by the management. The term of office should be short, from two to twelve months, so that as many people as possible may have an opportunity of taking part in the work, but only part of the committee should retire at any one time so that a certain continuity of tradition is maintained. Even the thoughtless type of person may occasionally be appointed with advantage as work on the committee has a good effect on him. The committee should inspect the un-

dertaking periodically and pay particular attention to new employees. American experience has been that these committees working in co-operation with the management, and with the necessary technical training, have proved a great help to the management.

One of the most important results from this system is that in performing the duties the workers find out, among other things, how little improvement can be effected by merely fencing machinery or in general by mere expenditure on technical precautions. The chances of successful results from the system are increased by giving the committee definite powers. It is sometimes arranged that if a suggestion of a committee is rejected the latter can press its case by laying it before the officials of the undertaking in an ascending scale, going as far as a joint committee under the chairmanship of one of the board of directors. The Standard Oil Company has set up "safety courts," including employee members; all chauffeurs are responsible to these courts, which can inflict sentences of "hard labour," such as rolling oil barrels in the warehouse, for careless driving. The committees may also be given a voice in the dismissal of workers for gross carelessness.

The Foreman.—Nothing can be expected of workers' committees unless the foreman can be won over to the idea that the committee is intended to relieve him of some of his burdens, and that suggestions made by the committee are not an infringement of his authority. The foreman should be made primarily responsible for accidents and should endeavour to keep accidents down to a minimum "even at the cost of production." The foremen should meet at least once a month under the chairmanship of the works superintendent, and the safety engineer should be the permanent secretary of these meetings, but never chairman, as this might give offence to the foremen. At these meetings it should be made clear that the foremen cannot drive their men into safety practices, but must lead them by degrees under careful discipline. In large undertakings there should be foremen's committees with power to inspect the different departments of the undertaking in turn at regular intervals, and all foremen should in turn serve on these committees, with a view to standardizing safety practices throughout the undertaking. No money rewards should be given for satisfactory safety conditions but that safety work should be taken into consideration for promotion.

Methods of Safety Education.—The purpose of safety education is to make the industrial worker avoid all accident risks during his employment. He must therefore first be

taught what hazards there are and how they are to be avoided. European experience has shown that the posting up or distribution of printed rules is not of much help. The most important and most difficult side of education consists in rousing and strengthening the will to avoid accidents, and in making careful conduct a habit that becomes second nature. For new staff and especially for foreigners a regular course of training is recommended. For the ordinary staff the methods adopted are more varied, including lectures, if possible with lantern slides, cinematograph displays, posters, and competitions. It is better to show pictures illustrating the results of accidents, or the way in which they arise, than to present a display of actual safeguards. The most powerful inducement to give up hazardous practices is an appeal to the worker's family affection and sense of responsibility for his wife and children. In works magazines it is better to report what is praiseworthy, to mention the names of people who have distinguished themselves, to give photographs of the members of the safety committees and the like, than to present a one-sided criticism of the conduct of careless workers. The National Safety Council gives a prize every month for the best suggestions, and at the end of the year the winner of the largest number of monthly prizes is given a special prize. A similar competition has recently been instituted by the British Industrial Safety First Association.

The Health of the Working Child

The Bureau of Women in Industry of the New York State Department of Labour has recently published its findings from a study of the health of 412 working boys and girls in the continuation schools of New York City during the first half of the year 1924. The study showed that only 4 per cent could be regarded as having no defect. The remaining 96 per cent were classified by the examining physician into those with minor, moderate, advanced and serious defects. The minor and moderate groups, all of which represent conditions that could be cured or mitigated, included approximately 90 per cent of all the children examined. Forty-nine per cent or nearly one-half of these children had some physical defect which was found to be intensified by the requirements of their jobs and 28 per cent of the physical defects were judged to be accentuated by some requirement of work. The number of physical defects for each child averaged 2.4. Almost one-fifth of the children had some visual defect, one-third had dental defects, one-eighth had enlarged tonsils, four per cent had heart

affections, three per cent had lung abnormalities, and one per cent had tuberculosis; three per cent of the girls had thyroid enlargement. Half of the children with a flat-foot condition had to be on their feet the greater part of their work day; one-fourth with defective eyes worked under eye-strain and over one-half with heart affections worked under an excessive nerve strain. The report concludes: "For children who at an early age have given up schooling presumably because they expect to support themselves by trades where physical fitness is their greatest asset, it is a serious finding that every other one while yet under sixteen has some incipient physical defect which the requirements of his work appear to be intensifying. Subjecting the child under sixteen to conditions of work which tend to break rather than strengthen his physical equipment would seem to be false economy, for may it not be true that in this country, in an industrial era, the measure of the health of the young industrial worker is the measure of the health of the nation."

At the time of the study attendance in continuation school was required of all working children under sixteen, but of children between sixteen and seventeen only when they were not graduates of elementary schools. By September 1, 1923, all working children under 18 who are not high school graduates must attend continuation school.

Industrial Health Programme of Paper Mill

Dr. Frank L. McCarroll, a medical officer of health in the province of Ontario, whose district includes the town of Espanola, reviews the work of the Spanish River Pulp and Paper Company in promoting the health of their employees. He states that it is the experience of the company that industrial health should be regarded as an investment, not only because it reduces lost time from illness and other causes of absenteeism, diminishes labour turnover, prevents accidents, and generally safeguards the health of the workers, but also because it advances the spirit of good will, loyalty and co-operation which are of essential and fundamental importance to the attainment of the fullest measure of success.

The company has three mills, one at Sault Ste. Marie, Ontario, one at Sturgeon Falls, and one at Espanola. There is "The Mutual Interest Board" composed of equal representation from men and management, whose business it is to consider mutual interests and to arrange and ratify working agreements. This Board grew out of the annual conference held at the Sault Ste. Marie office in 1922, at which

time new agreements were signed covering wages and working conditions for twelve months. The labour organizations elect their representatives on this Board, and the management representatives are appointed by the general manager of the company. The Board meets every three months at one of the mills. Among the subjects which it has studied and on which recommendation have been made to the management are: the apprenticeship system; pensions; the vacations system; the suggestion system; first aid; and the community and the plant nurses. This Board is always ready to co-operate in any suggestions made in regard to the health of the employees. The company, in connection with its medical service is offering to its employees the services of a contract physician, an industrial nursing service, and a community nurse. The work of the community nurse assigned to the town of Espanola, which is a company town, covers a very large field, overlapping to some extent the industrial visiting and includes school visiting. In this particular town the company has sponsored dental, throat, and ear and eye clinics which have apparently served the company efficiently. At the present time the company has under consideration the routine examination yearly of all its employees.

Accidents to Child Workers

An analysis of the causes of accidents in the State of Wisconsin recently made by the Children's Bureau of the United States Department of Labour showed that nearly twice as many of the injuries to minors as to adults were due to machinery. Three States, Wisconsin, Massachusetts and New Jersey were included in the study, but comparative figures were only obtained for Wisconsin State. Each of the States studied prohibit the employment of children under 16 years of age in certain occupations, chiefly in the operation of the more dangerous machines. Wisconsin and Massachusetts also prohibit some employments for children under 18 years, but operation of many dangerous machines was permitted to children of 16 and 17. The good results of the special protection accorded children 14 to 16 years and the need for its extension to children up to 18 years, are seen in the proportion of accidents due to machinery among the children of the different age groups. In each of the three States the percentage of accidents to children 16 and 17 years of age, was larger than that of the accidents either to children 14 and 15 (the protected group), or to those 18, 19, and 20, in spite of the fact that a greater proportion of the minors 18 and over are employed in the more dangerous occupations.

NOTES ON LABOUR UNION ACTIVITIES

Amalgamated Association of Iron, Steel and Tin Workers

ONE hundred and twenty-eight delegates, including nine officers, attended the fiftieth annual convention of the Amalgamated Association of Iron, Steel and Tin Workers, held at Pittsburg, Pennsylvania, from April 7 to 21, under the presidency of Mr. M. F. Tighe. This Association has 4 local unions and 135 members in Canada and a total membership of 13,870.

Two outstanding features of the convention were the speeches delivered by the Hon. James J. Davis, United States Secretary of Labour, and William Green, president of the American Federation of Labour. The Secretary of Labour spoke of the new relationship between the employers and the employees. He said:—

. . . . In the old days the minute you thought something was going against you you were ready for a test of strength because you felt that was what the boss wanted. We have outgrown this attitude; we have decided that the old method of ironing out differences with the employer are outlawed. The rule of reason has come in and we have seen that the best way is to get together and talk it over. Experience has shown us that life is happier if we work with a man instead of fighting against him. The old hostile employer and the resentful union have passed on and the new order has taken the place of the old one. There has sprung up the gradual but sure realization that the worker and employer are in a sense co-partners in the working out of plans of relationship. The employer has discovered what a man of brains his worker is. He is too valuable an asset to be ignored and antagonized. He would rather have him contribute his experience and ability to the success of the business. And the worker has discovered that co-operative effort and mutual understanding mean steadier employment, good business and better returns on both. Industry has found that it needs the working man's brains as well as the skill of his hands. You put money into your pocket and peace in your heart when you help along instead of pulling back. Everywhere you see springing up in every kind of industry plans to bring the manager and the man to the council table at stated regular times, to talk things over, to bring out ideas, to iron out differences. They call these associations by all sorts of names—shop councils, shop committees, joint conferences. But the idea is the same with every one. That idea is to straighten out differences before there is the slightest reason for such a thing as a strike or lockout. Another purpose of these associations is to encourage the worker to put forth his ideas as to how the business may be benefited and increased to make him feel that he has a real part and a big part in its success. . . . The man who works and the man who employs are in a sense co-partners—and co-partners is no empty word, either. In twenty-five years the number of shareholders who own stock in American corporations has grown from 4,000,000 to 14,000,000 and the number of workers who are shareholders beats this ratio. The biggest corporations we have are opening their books and selling stock to workers. The truth is that the

American worker is fast becoming his own employer—actually, really his own employer and realization of that is in his mind now as he works. That's why we hear less and are going to hear still less about industrial disturbances. And we've all got to swing into line. There's a growing spirit among employers now to see who can be fairest in his dealings with the worker, and there is a similar attitude among the unions in the way of mutual good will and co-operation.

President Green in speaking of the organization of labour said:—

The great American labour movement is committed to the policy of collective bargaining, wage agreements, conferences and understanding and to-day we find many economists, statesmen and progressive employers who have embraced that doctrine and who are committed to this whole scheme of collective bargaining, wage agreements, understanding and conferences. Only recently Sir Henry Thornton, the manager of the Canadian National Railways, the largest single railway system in the world, stated in an address that organized labour and collective bargaining were here and furthermore he said, "It is here to stay". He said that as one large employer of labour he believed in dealing with trade unions. He accepted them as an institutional development of modern civilization and he advised employers of labour that it would be better for them to treat with trade unions instead of fighting with them and trying to destroy them. This statement, it seems to me, is significant as showing the tendency of the times, the new concept of the organized labour movement.

A report of the wage committee making recommendations as to wage scales for the year 1924-25 was submitted to the convention. The following resolutions submitted by the finance committee were referred to a referendum vote of the members:—

(1) To revise section 176 of the Constitution dealing with dues and other moneys. Each member of a sub-lodge earning less than \$5 a day shall pay the sum of \$1.25 per month. Members earning \$5 to \$7.50 per day shall pay \$1.50. Members earning \$7.50 to \$10 per day shall pay \$1.75. Members earning \$10 to \$12.50 per day shall pay \$2. Members earning \$12.50 to \$15 per day shall pay \$2.50. Members earning \$15 to \$20 per day shall pay \$3.25. Members earning \$20 or over shall pay an additional \$1 per month for each \$5 earned over \$20 per day.

(2) To all members who have or shall retire from the trade and who have not or do not desire to take advantage of our silent membership feature shall pay a minimum dues of \$2.75 per quarter, their per capita tax to be \$2.75 per quarter, and that space be furnished in the quarterly report to list members taking advantage of this classification, provided, however, that nothing in this section shall restrict the right of any member to take advantage of our laws granting honorary cards. Any sub-lodge officer proven guilty of making a false classification shall be compelled to make full restitution and fined not less than \$25 or expelled from the order. This classification not to apply where the period of retirement is less than six months.

The above rates to be for all purposes. The due card to be sufficient notice of a member's standing.

(3) That the dues of this Association as apportioned in price per month must be paid in advance. Members who have not paid their dues on or before the

fifteenth day of each month shall be deprived of sick, accident and death benefits for six months from time delinquency occurred. And no suspended member is to be recognized in any grievance by the mill committee.

(4) That section 32 be amended to read: To enable the International Association to meet all expenses incurred by it, subordinate lodges shall pay into the general fund of the International lodge every quarter the sum of \$3.50 for each member in good standing in the lodge. This to apply to all lodges where the average wage is \$5 or over per day.

In lodges where the average wage is less than \$5 per day the per capita tax will be \$3 per member per quarter.

In order to maintain the defense fund of this Association fifteen per cent of the total amount paid into the international treasury as per capita tax shall be placed in the strike and lockout fund, said fund to be used for strike and lockout purposes only and no other fund to be used for strike and lockout benefits.

When there is less than \$10,000 in the strike and lockout fund \$5 per week to each member in good standing shall be paid. When there is \$10,000 or more \$8 per week shall be paid to each member in good standing.

That when the strike and lockout fund falls below \$10,000 an addition of 25 cents per member per month be levied on all members and added to and become a part of their dues, this addition to cease when the strike and lockout fund reaches \$10,000. This to be determined quarterly in advance and secretary-treasurer notify each sub-lodge.

This resolution to take the place of section 54.

(6) All conflicting laws be eliminated.

(7) It was recommended that this resolution go before the rank and file in a special referendum.

Amendment to section 53—Any subordinate lodge entering into a legalized strike or lockout in the manner provided by our laws, shall receive from the strike and lockout fund the amount per week as specified in section 54 for each member. Balance of section 53 to remain as it is.

Amendment to section 7—That the convention instruct the International Executive Board to submit this plan to referendum as coming from the Board by order of the convention.

The international officers were instructed to approach the officers of the American Federation of Labour, urging them to work for the establishment of a radio broadcasting station for labour, owned and operated by labour. It was further suggested that State Federations might make use of existing stations.

Order of Sleeping Car Conductors

The third triennial convention of the Order of Sleeping Car Conductors was held at Kansas City, Missouri, from March 9 to 12, under the presidency of Mr. M. S. Warfield. Forty delegates were present, representing 2,279 members of whom 38 are in Canada.

The General Secretary-Treasurer's report showed a balance of \$44,557 in the bank on December 31, 1924.

Several changes were made in the constitution and rules of the Order. It was decided that insurance should become effective six months from the date of acceptance or reinstatement to membership, and that after that

period, the insurance shall remain in force only during such time as dues are paid. Two certified statements of qualified physicians are to be required, setting forth that the insured is totally and permanently disabled by disease or injury, which would prevent him from earning a livelihood; and at least one of these certificates must be from a duly qualified physician designated by the Order under the supervision of the Grand President. The insured will have the option, upon the date of his retirement from active service as conductor for either physical disability or age limit, of accepting an insurance settlement of \$250 in lieu of all other insurance benefits, or a pension according to the following plan:—Ten dollars per month, payable quarterly, beginning with the date of retirement and continuing until death of the insured or until \$1,000 has been paid. In either event, all liability of the Order of Sleeping Car Conductors ceases, and no further payments of any kind whatsoever shall be made. The insured, upon acceptance of the pension plan, will cease payment of all dues and assessments for all other insurance benefits. A resolution was also passed instructing the executive to consult a competent actuary on insurance for the purpose of obtaining statistics for a pension plan for the members on reaching the date of retirement and that same be submitted to the members by correspondence for their action.

The convention decided that "At the age of 70 years, a member in good standing who shall be retired from active service shall be carried as a non-voting member with full insurance benefits, with dues, exempt from assessments, at the rate of \$3 per quarter to be credited to the General Fund of the Grand Division. Failure to pay such dues within thirty days from the date they are declared payable will terminate membership and cancel all insurance benefits. Said members shall furnish the General Secretary-Treasurer with proper evidence as to age and retirement." A motion was passed that the committee on insurance should study group insurance and report within one year.

Mr. M. S. Warfield was re-elected as president and Mr. W. O. Murphy as general secretary-treasurer of the Order.

International Boot and Shoe Workers' Union

The International Boot and Shoe Workers' Union held a convention at Montreal, Quebec, from May 18 to 22. This was the first convention in four years and the sixteenth convention of the Union. There were present 230 delegates. The Union has 15 local unions and a membership of 1,734 in Canada.

In the reports to the convention regret was expressed that members in some localities had to submit to wage reductions. Since May, 1921, it was stated, nineteen strike sanctions had been requested and granted. Five satisfactory adjustments were secured without strikes, fourteen strikes were called and after contests lasting from two days to one year eleven strikes were won, two were lost, and one resulted in compromise. All these sanctions were granted to resist wage reductions. The payment of strike benefits amounted to \$300,000, or \$100,000 more than had been paid in strikes in the twenty years previous. It was believed, however, that the wages maintained justified the expense.

Mr. John J. Manning, secretary of the union label trades department of the American Federation of Labour in addressing the convention announced that there would be a campaign in the United States and Canada in the autumn of this year for organization and educational purposes in respect to union label trades.

By a unanimous vote the salaries of the officials of the Union were increased. In addition to expenses the president's salary will be \$7,500 per annum, instead of \$5,000 as formerly; the vice-president's salary will be \$5,000 instead of \$4,000; and the secretary-treasurer's salary will be \$7,500 instead of \$5,000. Increases in fees of members were also made, though considerable opposition was offered to this proposal, which was passed by a vote of 143 to 58. Dues in the union commencing January 1, 1926, will be 35 cents a week per member instead of 25 cents a week as at present. The initiation fee is also to be raised on the same date from \$1 to \$2, and the reinstatement fee will be \$5 instead of \$4.

The convention decided to increase the death benefits from \$50 to \$100 for members in good standing for six months continuously, and from \$100 to \$200 for members in good standing for two years continuously. Higher burial costs was a factor emphasized in support of this resolution. In reply to a question as to the benefits that would be derived from the increased revenue of the Union the secretary stated that the increase would amount to about \$90,000 a year; \$60,000 of this would go to the general funds, and the remainder to the local funds. The increase in the payment of death benefits would not represent more than 25 cents per member per year. The union had been paying death benefits of \$100 at a cost of not more than 55 cents per year per member, while the same insurance with the insurance companies would cost each member \$1.80 each year.

A resolution was adopted instructing the

general officers to render such assistance as it is possible for the union to give to the striking miners and their families in Nova Scotia, as was also a resolution in favour of the child labour amendment to the United States Constitution.

The next convention will be held in 1927 at Rochester, New York.

Mr. Collis Lovely, of Boston, Massachusetts, was re-elected president of the union; Mr. Gadd Martindale, of Rochester, New York, as general vice-president; and Mr. C. L. Baine, of Boston, Massachusetts, as general secretary. Among the members elected to the general executive board was Mr. Zotique Lesperance of Montreal, Quebec.

Labour Educational Association of Ontario

The twenty-third annual convention of the Labour Educational Association of Ontario was held at Kitchener on May 25, with 92 delegates present from various central labour unions and local trade unions. The president, Mr. James A. Sullivan, of Hamilton, was chairman of the gathering.

The Association is a development of the Labour Educational Association of Western Ontario which was formed in 1903 as a voluntary unaffiliated body; the word "Western" was dropped from the name in 1907.

The convention endorsed a resolution calling for a custom duty of ten cents a pound on imported printing matter from the United States. Criticism was expressed of the sale in Canada of Christmas and Easter greeting cards made outside of the Dominion. A proposal to establish a provincial labour paper was endorsed, but it was considered that before such a paper could be launched there should be 2,000 one dollar paid-up subscriptions. Resolutions were adopted requesting amendments to the Mechanics' Lien Act, and to the Mothers' Allowance Act to include mothers with one child, to reduce the desertion period to two years, and to relax the conditions as to cash and property assets. Another resolution criticized the recent revision by the Dominion Government of the scale of fair wages in the Welland ship canal contracts. The provincial government also was criticized for not including a fair wage clause in the contracts in connection with the new administration building, and it was suggested that there should be a fair wage law in Ontario for work let by the provincial government. A motion to affiliate with the Workers' Educational Association of Canada was rejected.

The president, James A. Sullivan, and the secretary-treasurer, Joseph T. Marks, were re-elected by acclamation. London, Ontario, was

chosen as the place of meeting for the 1926 convention.

United Women's Educational Federation of Ontario

The United Women's Educational Federation of Ontario, an organization which works in conjunction with the Labour Educational Association, has recently issued its fifth annual report, which showed that the Federation is in good condition from a numerical standpoint. The Federation came into existence in May, 1920, and includes in its membership women's organizations willing to subscribe to the platform of principles which pay a *per capita tax* of \$1 per annum. Among its objects are: (1) the education of women on all social and political subjects affecting their interests; (2) free and compulsory education until 18 years of age; (3) equal pay for equal work; (4) nationalism of the medical profession, and (5) full franchise of all persons who attain the age of twenty-one years in municipal, provincial and federal elections. The report states that it is "a working women's organization whose first duty is toward those of our own sex who earn their daily bread by honest toil".

Direct activities of the Federation during the past year included the formation of local branches wherever feasible, affiliation with federated charities, affiliation with local unemployment councils, etc. Extensive correspondence was conducted with the provincial Attorney General's Department regarding the suppression of "canned heat" drinking. Concentrated efforts are now under way to bring boys and young men within the provisions of the Minimum Wage Act. It was

stated that the Ontario Premier has expressed his sympathy and interest with the Federation's proposals.

The Federation also interested itself in the disposition of "Barnado boys" in Canada, and protested against the inactivity which they considered had been shown by the Federal Government relative to unemployment.

The Federation adopted resolutions favouring the institution of information centres in connection with workmen's compensation; amendments to the Mothers' Allowance Act; providing milk and hot meals to under-nourished school children; restriction of immigration to agricultural workers; measures providing that those who come into the country to work upon farms do not gravitate into the towns and cities to accentuate unemployment, and closer supervision, both as regards expenditure and administration, of private institutions receiving government grants.

Mrs. W. F. Singer, 137 Fairview avenue, Toronto, is president of the Federation, and Mrs. H. G. Fester, 41 Park avenue N., Hamilton, Ontario, is the general secretary.

The Minister of Agriculture and Fisheries of England and Wales and the Secretary for Scotland have appointed a Committee to consider and report whether it is desirable that workers in agriculture should be compulsorily insured against the risk of unemployment, and, if so, on what terms and conditions and in what manner the insurance of agricultural workers can be most effectively provided either by the inclusion of agriculture within the scope of existing legislation or by means of new legislation.

Social and Labour Conditions in Sweden

THE Department has recently received a reprint from the "Sweden Year Book, 1925," entitled "Social and Labour Conditions in Sweden." The conditions described include those relating to the protection of workers, social insurance, the care of the poor and of children, the labour markets, workmen and employers, cost of living and wages, the housing problem, temperance legislation (the Bratt system), and co-operative societies. The Swedish trade union movement started about 1880; it was modelled on the pattern of the corresponding movements in Denmark and Germany, and follows the Anglo-German type of labour movement. Local trade unions first grouped themselves according to districts, but about 1890 national trade unions were

formed covering the whole country. In 1898 the movement was consolidated by the formation of a common central organization, the General Federation of Swedish Trade Unions, which at the beginning included unions numbering 27,371 members. At the beginning of 1924 the Federation included 33 trade unions with 3,448 branches and 313,000 members. There are now about 400,000 organized workers, and it is doubtful whether, in any country outside Scandinavia, the proportion of organized workers is as high as it is in Sweden.

Employers' organizations began soon after 1900. In 1902, when a general strike for political purposes took place, the General Federation of Swedish Employers was formed

among the larger industries, which are represented in the general federation by special branch organizations. The Federation at the end of 1903 comprised only 101 employers with about 29,000 workmen, whereas at the beginning of 1924 there were 2,155 employers and about 221,167 workmen. At the present time practically all purely industrial organizations are members of the Federation. Employers in agriculture, of railways and shipping are, however, still associated in independent organizations.

The system of collecting agreements has been widely adopted in Sweden. In several trades the large majority of workers are affected. In 1923 agreements were in force comprising 11,437 employers and 391,197 employees, this being the highest number for any year except 1920. It has been established by decisions of the High Court of Justice that trade unions and employers' organizations in Sweden are legally responsible for the carrying out of collective agreements, but any sympathetic strike or lockout during the period of an agreement is not regarded as a breach unless such cessation of work was expressly prohibited in the agreement. There have been repeated proposals before the Riksdag for special legislation concerning collective agreements and their observance, but no positive result has been reached.

No compulsory procedure for arbitration exists in Sweden. Parties in disputes may accept or refuse the services of the official

mediators, or any conciliatory proposals that may be put forward. The first law concerning mediation in labour disputes was promulgated in 1906 and was in force until 1920 when it was superseded by a new law. According to both laws mediation is in the hands of mediators appointed by the Government for different districts, at present seven in number. Where a dispute concerns several districts, it is generally allotted to the mediator who is best acquainted with working conditions in the trade in question. The law also permits a certain mediator to be permanently appointed to deal with labour disputes in a special industry independently of the district. In specially large or generally important conflicts, mediation may be placed in the hands of a special conciliation commission of which one or more of the ordinary mediators are members. Simultaneously with the revision of the act in 1920, two laws were promulgated with the object of furthering voluntary arbitration. One of these laws established a Central Court of Arbitration for the settlement of disputes concerning the interpretation and application of collective agreements. The other law provides for the appointment by the Government of special arbitrators whose sphere of activity is not limited as is that of the central arbitration court, and who may take action in disputes concerning individual labour contracts which have been passed to them by judgment by the parties concerned.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Institute of Technology and Art at Calgary

The following extract from a statement by the Minister of Education for Alberta outlines the policy and plans of the Government in connection with the development of vocational education in the Provincial Institute at Calgary.

The Institute of Technology and Art has from the first made steady and gratifying progress, the enrolment in day classes for the year 1923-24 reaching 399, which is 93 in excess of that of the previous year. Classes were conducted in automotive electricity, chemistry for nurses, drafting, dressmaking and millinery, industrial electricity, industrial chemistry, machine shop, mining, motor mechanics, steam engineering, telegraphy, and tractor engineering. Including night classes and correspondence students, the enrolment for the year reached the very considerable total of 939, while estimated on the basis of student hours, the amount of work done at the Institute last year was almost three and one-half times the amount done in 1921. It is felt that the Institute is already rendering a valuable service in giving a semi-scientific, semi-practical training to many students whose needs are not met by either our public schools or the university.

It will be the policy of the government, as

need arises, and as provincial funds permit, to encourage the further development of the Institute in the field mapped out for it by the university commission of 1924. Regarding the scope of that field, the commission, which was composed of Sir Robert Falconer, president of Toronto University; President Murray, of the University of Saskatchewan; President MacKenzie, of Dalhousie University, recommended as follows: "We recommend that this Institute of Technology and Art be empowered to grant certificates and diplomas and to give instruction in such subjects as (a) mathematics, the sciences, and their application to the trades and industries, etc. (including mine management, etc.); (b) applied mechanics, drafting, machine design and construction, wood and metal working, tool and pattern making, building construction, sanitation and plumbing, industrial electricity, steam and gas engine work, etc.; (c) the fine and applied arts; (d) household science; (e) accounting, business methods and commercial subjects, printing and journalism, etc.; (f) English and modern languages, general and industrial history, economics, political and social science, etc.; (g) and other subjects within the scope of the institute defined in this and the following sections, as may be determined from time to time."

While the government cannot interpret this or anything else contained in the recommendation as meaning that the Institute should be permitted to develop into a junior college of liberal arts, it is recognized that there is here outlined a much wider field than has yet been covered by the Institute, and it is believed that time will prove that the cause of education has been better served by leaving the Institute to work out its own destiny in the cultivation of its own broad and important field than by permitting it to take two years of university work, one of which is already available in the excellent high schools of Calgary, which would be to make it to a large extent an adjunct of the university. In order that the work of the Institute may be co-ordinated with the general educational situation of the province, application will be made on its behalf for affiliation with the university, which when granted will give the principal of the Institute a place on the senate of the university and will entitle students coming from the Institute to the university to receive credit for such courses taken in the institute as may be equivalent to those in the same subject conducted by the university.

Technical School at London, Ontario

The name of the technical school in London, Ont., has been changed from the London

Technical High School to the London Technical and Commercial High School. The change was made because of the expressed opinion of the principal and staff that the commercial side of the courses taught in the school should be brought more to the attention of the public.

Short Course in Technical Schools of Toronto

Steps have been taken by the Advisory Industrial Committee of the Board of Education for the establishment of a short, two-year course in the Technical Schools of Toronto. Acting upon a formal request made by Trustee Wm. C. McBrien, chairman of the School Board, Dr. A. C. McKay, Director of Technical Education, brought down recommendations outlining a two-year course.

The recommendations adopted were as follows: That the Director of Technical Education be authorized to make changes in the industrial course of the technical schools so that a pupil who remains in one of the schools for only two years, may in the second year give one-half of his time to some chosen trade. The subjects will be: First year,—General education (one-half time), arithmetic, algebra, geometry, elementary science, English literature, grammar, history, geography and gymnasium; Vocational training to include woodwork, metal work, electrical construction and installation, printing, industrial art and drafting. Second year,—General education (one-half time), arithmetic, algebra, geometry, trigonometry, physics, chemistry, English literature, grammar, history, geography, economics, and gymnasium; Vocational training to include carpentry, cabinet-making, machine-shop practice and forge work, foundry practice and pattern making, plumbing and steam fitting, bricklaying, motor mechanics, printing, watchmaking, electrical construction and installation, industrial art, drafting. (In this year students may spend one-half of their time on some special line of practical work. For each group special classes will be formed.) Dr. McKay also received authority to make similar adjustments in the art courses. It is understood that under the latter head will be included special two-year courses for girls.

It was explained by Dr. McKay, that the present four-year courses in the technical schools would continue just as at present. There would always be a great many students, he said, who would rather take the longer courses.

It was announced by Trustee McBrien that he would move in the Management Committee at its next meeting that arrangements be made for pupils in the third-book classes who

were not making progress in their studies at the usual pace to attend classes at the technical schools so that they could be instructed in practical as well as academic work. He stated some 500 students in the public schools would be affected by such an arrangement. He also said that these pupils were not sub-normal in any way, only lagging somewhat in their studies.

A two-year course for pupils attending the High Schools of Commerce, to give instruction to those who cannot attend for the full four-year course, has been designed by Principal R. H. Eldon of the Central school, and will be put into effect at the commencement of the next term. This two-year course was designed to meet similar needs experienced in the technical schools. Subjects to be given in the first year are business practice, book-keeping, penmanship, shorthand, typewriting, rapid calculation, business arithmetic, algebra, commercial geography, spelling, business correspondence and English composition, English literature, civics and history, art, physical exercises. Similar subjects will be given in the second year, with study of materials added.

Quebec Conference on Vocational Education

An important conference of the directors, teachers and other persons engaged in vocational education work throughout the province of Quebec, called by Dr. A. Frigon, the provincial director, was held from June 11 to 13 in the Montreal Technical School.

The programme included the discussion of all phases of secondary vocational education, but particular emphasis was laid upon the relationships between the elementary and vocational schools in connection with preparatory courses of study for vocational classes, and upon the problems of apprentice training in relation to the work of vocational schools.

It is hoped that the conference will result in closer co-operation among the vocational schools of the province, and that the schools and industry will be drawn closer together in their common problem of training industrial workers. It is the first provincial conference of this kind to be called in Canada and marks a decided step forward in the development of vocational education in the province of Quebec. Hitherto the schools have worked independently without the means of getting together for co-operative action or to benefit by the interchange of ideas and the discussion of methods. An account of the convention will be given in the next issue.

World Federation of Education Associations

Two years ago, at the invitation of the Educational Association of the United States,

representatives of many of the countries of the world met in San Francisco and formed the World Federation of Education Associations. This Federation will hold its first convention in Edinburgh, Scotland, in July, when educationists will gather from every country in Europe, the Near and Far East, the British Commonwealth and the United States. The delegates of the last named country have chartered a ship to accommodate their numbers. Major Fred Ney has made arrangements enabling the Canadian delegates who so desire to travel with the Overseas League party.

The Federation now has a membership of 5,000,000 and of these the Canadians number 20,000. According to its constitution its object is "to secure international co-operation in educational enterprises, to foster the dissemination of all information concerning education in all its forms among nations and peoples, to cultivate international good will, and to promote the interests of peace throughout the world.

Apprenticeship and Vocational Schools in Great Britain

The following is taken from a recent article by Hugh Davies appearing in the *London Times*:—

One of the most interesting decisions of the Building Industries Committee is that special efforts shall be made to secure a sound apprenticeship training for the recruits who will enter the trade in connection with local housing schemes. A good many recent attempts to revive the apprenticeship system in the building trades have met with comparative failure, but the Committee retain a belief in the inherent advantages of the system, and, in a memorandum of instructions to local joint committees, give detailed suggestions regarding apprenticeship training.

There is, of course, nothing new in the suggestion that building apprentices need supplementary instruction on organized lines, in technical classes or otherwise. For thirty or forty years there have been far-seeing employers who have recognized that in course of time the technical school must become an indispensable factor in the training of skilled artisans for building. The influence of the late Mr. Richard Roberts, for example, which was so effectively exerted in connection with the establishment of a school of building by the London County Council, and the work of the late Mr. W. Renshaw in promoting improved schemes of building apprenticeship will be remembered as notable services to the building industry. More recently the detailed study of building apprenticeship which was made by the Education Committee of the late Building Joint Industrial Council, and summarized in a report to the Council, emphasizes the interdependence of the workshop and the technical school in regard to apprenticeship training.

For a short period before the war, and more particularly during the last four years, the facilities for the technical study of building in the various schools have greatly increased, and, generally speaking, local committees will not find it difficult to secure for apprentices the required supplementary education. There are, in fact, over 300 centres where instruction

in subjects that have a bearing upon the theory or practice of building is given. Not all of the instruction given at these centres is adapted to the special needs of the apprentices who will come under the supervision of the local building committees, but there is not the slightest doubt that if any day-time training is not given steps can be taken to provide it. In this connection it may be mentioned that there are about twenty centres where day classes for building apprentices are already organized. As a rule these classes are established in large towns at the local technical school, but there are other examples, such as the interesting scheme for the day-time instruction of stone-masons' apprentices organized by the principal quarry owners on the Isle of Portland. The usual arrangement of day-time classes is that apprentices attend on two half-days (or one whole day) and receive instruction in building subjects, drawing, science, calculations, and, for juniors, in some cases a certain amount of English.

In a few existing schemes of apprenticeship it is laid down that apprentices shall attend evening classes in addition to those held in the day-time, and in smaller areas the supplementary instruction will doubtless be furnished mainly in evening classes. Reference should, however, be made to the specialized form of education which is provided in full-time courses for intending apprentices to the building trades. The essential feature of these courses, which cover a period of two or three years from the age of 13 or 14 is that a substantial part of the time is devoted to subjects of general education, so that the future apprentice is started on his working career with better educational equipment than his fellow who goes to the trade direct from an elementary school. In addition, he has acquired a substantial knowledge of the scientific principles of his trade and has received a fair training in the use of tools and in the simple processes of building. These junior technical schools of building are established mainly in the London area.

In the early days of the present system of evening technical schools trade instruction was confined to such matters as drawing and the principles underlying trade practice. In due course, however, the young craftsman found that his opportunities of "trying out" in the workshop those principles which he had learned in the school were rare. To meet his difficulty practical workshops were set up at the school, and actual practice in trade processes thus introduced is still a feature of most technical courses. At a later stage the younger apprentices of the various trades asked for elementary instruction in trade processes, which could not be obtained in the ordinary workshop. To comply with the needs of these novices, organized and progressive courses of practical instruction have been evolved by the school instructors, who are themselves skilled and experienced craftsmen. In the full-time courses, as much as ten hours per week may be devoted to trade practice, and a very substantial degree of trade skill acquired by the intending apprentice before he enters upon his career in the ordinary workshop.

Labour Schools and Colleges

The following summary of educational activities conducted by organized labour appeared in a recent issue of the *New York Times*:—

When William Green, President of the American Federation of Labour, recently told the convention of the Workers' Educational Bureau in Philadelphia that practical and technical knowledge of industry and economics are requirements now demanded from every representative of organized labour, he echoed an opin-

ion expressed years ago by European labour leaders. They have since translated it into action to an extent not generally known in America. Nearly every country where there are unions has schools established or planned in the interest of labour union efficiency.

The activities of various national bodies devoted to preparing coming leaders of labour, and numbers of the rank and file of the proletarian armies for effective unionist action, have become important. So much so that at the March meeting of the Executive Committee of the International Federation of Trade Unions in Amsterdam it was decided to ask the officials of the twenty-three affiliated national labour organizations with a membership of some 16,000,000, to submit data on the advisability of forming a special Workers' Educational International to systematize the work and lighten the burdens of the Federation.

For several years the summer schools conducted by the International Federation of Trade Unions have served the double purpose of giving a number of selected students from the various national labour schools and colleges the chance to hear lectures by international authorities on labour, politics and economics, also of facilitating the exchange of ideas by the instructors.

This year the summer schools are to be held in August in Brunnsvik, near Stockholm, with the list of lecturers headed by Richard Sandler, Premier of Sweden, who succeeded the late Hjalmar Branting; and in Prague, where Dr. Leo Winter, Social Democratic Minister of Social Welfare, and several other high Czechoslovak officials are expected to address the students and visitors on the social legislation being put into effect in the new republic.

Each school will last a fortnight. Between lectures and other work there will be provided many sorts of entertainment by local trade unions and educational leaders. At last year's school at Oxford twenty countries were represented, and this number is likely to be exceeded. The lectures are to be in English and German, and also in French if enough students ask for it. The subjects of the lectures at the summer schools include history and economics, as well as such timely matters as the migration of workers, the organization of farm labourers, the problem of unemployment, and industrial organization.

In England, Germany and Austria.—Details of the educational work done recently by trade unions and allied bodies in the various countries compiled by John W. Brown, one of the three secretaries of the International Federation of Trade Unions, may be summarized as follows: In Great Britain ten national unions have adopted the educational scheme of the National Council of Labour Colleges for their members within the last few months. This scheme provides in most cases for free access to evening classes and correspondence work. The British Co-operative Wholesale Society has offered two competitive scholarships at the Co-operative College worth about \$450 each to its employees between the ages of 17 and 21. The big thing in the British labour educational work is Ruskin College, which to a certain extent may be regarded as the parent institution of the numerous labour schools.

The most imposing labour college in Germany is the Academy of Labour in Frankfurt-on-the-Main, founded in 1921 under an agreement between the General German Federation of Labour, the Christian German Trade Union League and the Hirsch-Dunker Unions and the Prussian Ministry of Education. The State furnishes the Academy of Labour with quarters and equipment in the University of Frankfurt and the unions pay the students' board, buy their books and pay part of the instructors' salaries. Unions select the students who now number about seventy-five.

In Tinz there is a Socialist college, but it is said to be handicapped at present by the reactionary majority in the Thuringian Diet. Workers' schools on a smaller scale are common in German industrial centres, and some of them act as feeders for the Frankfurt institution. Special training classes for trade union officials have been maintained by the different labour bodies for many years, and the Social Democratic Party runs a sort of political high school for its promising members.

Austria with its highly developed trade union movement, ranks high in educational work, having special labour and socialist schools and high schools in nearly every corner of the republic. According to the Austrian Workers' Educational Centre, sixteen such schools were organized during the last half of 1924 and at present there are twenty-five schools for the special training of women labour leaders. In addition to regular school work the labour educational institutions organize excursions to the country.

Belgian and Finnish Students.—Belgium, where the recent gains by the Labour Party caused King Albert to invite Emile Vandervelde to try his hand at forming a cabinet, has long been a leader in educating young workers for positions of responsibility, both in trade unions and in public life. The Maison du Peuple in Brussels, with similar centres in all the larger cities, is the hub from which radiate all sorts of interlocking educational groups which supplement the work of the regular schools and colleges with special instruction.

The Finns are strong for education as well as athletics, and the Finnish National Centre for Workers' Education, founded in 1919, reports 150 Finnish study circles functioning on March 1, in addition to eight where Swedish is the language of instruction. The National Centre is backed up by eighteen national labour organizations and groups of individuals numbering 330,000. The State pays for some of the lectures, its share last year being 719 out of a total of 989 and also provides an annual subsidy of 75,000 finmarks (about \$2,000) to buy books for the labour study circles.

Swiss, Dutch and Australian Progress.—Switzerland, the home of Dr. Freud, runs true to form in its labour training work, the Socialist Workers' Educational Society having begun last February on a series of articles on "Psychological Hints for Labour Leaders". On the more practical side, the National Centre for Workers' Education and the National Trade Union Centre co-operated in organizing a series of ten lectures on the principles and practice of workmen's compensation by four experts, given in Lucerne from April 20 to 25.

In Holland the newly created National Centre for Workers' Education is organizing a network of local committees covering the whole country.

In Mexico, President Calles is reported to have brought back from Europe last fall a trunkful of textbooks and plans of Ruskin College and other labour colleges, and has announced his intention of founding such institutions in the land of the Aztecs.

In India the leaders of the struggling young labour movement see the need of education, as R. Thengdi, in opening the All-India Trade Union Congress in Bombay last February stressed the importance of inaugurating a comprehensive system of instruction for the workers and their children.

Australia is so far advanced in labour education that its Victorian Labour College recently held its seventh annual conference, at which remarkable progress in training union leaders was reported.

In fact, there is hardly a country where labour is organized to any appreciable degree that does not possess at least the beginnings of a scheme of special education in the interest of union efficiency.

As was brought out at the Philadelphia convention of the Workers' Educational Bureau of America, the American labour organizations are rapidly falling into line, so that Spencer Miller, Jr., of New York, Secretary of the bureaus, who is to attend the Copenhagen and Prague Summer Schools, will be able to report material progress to his European conferees.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Seventh Session of International Labour Conference

THE Seventh Session of the International Labour Conference which opened in Geneva on May 18 concluded its work on June 10. It is intended that an article dealing with the proceedings of this Conference will appear in the July issue of the LABOUR GAZETTE.

It is understood that Draft Conventions were adopted by the Conference on workmen's compensation, industrial diseases, prohibition of night work in bakeries, and equality of treatment for foreign and national workers. Recommendations were also adopted on workmen's compensation, and occupational diseases, as well as resolutions dealing with social insurance, vocational education, the organization of agricultural workers, labour in Asiatic countries and conditions of work and wages in coal mining. The proposed Draft Convention concerning weekly suspension of work for twenty-four hours in glass-manufacturing pro-

cesses where tank furnaces are used was defeated by the Conference.

Joint Maritime Commission

The third item on the agenda of the twenty-seventh session of the Governing Body of the International Labour Office which met at Geneva on May 18 last was the record of a meeting of the Joint Maritime Commission held at Paris on April 27 last. The subjects discussed at that meeting were as follows: Conditions of work in the fishing industry; protection of the health of seamen; statistics of shipwrecks and accidents at sea; deck cargoes; safety at sea; and standing orders of the Commission. A summary of the proceedings of the meeting are given below:—

It was mentioned in the report of the Director of the Governing Body to the Commission that the Governing Body had placed on the agenda of the general session to be held in 1926 the question of the simplification of the inspection of emigrants on board

ship. The Director made it clear that there was no question of issuing new regulations affecting the equipment of the ship, as the owners seemed to fear; it was simply proposed to try to avoid the subjection of emigrants travelling by sea to a number of successive inspections.

The Commission was informed that the regulation of hours of work on board ship had not been placed on the agenda of the 1926 Conference (LABOUR GAZETTE, November, 1924), as the voting of the question was equal in the Governing Body, as it had been in the Joint Maritime Commission itself. The Director felt obliged to inform the Governing Body that the seamen's representatives on the Commission did not conceal the disappointment which this decision had roused among the seamen. They were unanimous in considering that even if the question was not on the agenda, it could not be completely omitted from the discussions of the 1926 Conference. They announced their intention of using the constitutional means which were available to bring about at any rate a discussion of the question in the Conference.

The greater part of the discussions of the Commission were devoted to the second item on the agenda, the International Seamen's Code. It will be remembered that the Joint Maritime Commission formulated at the session at London in December, 1923, a draft "International Seamen's Code." This draft was submitted to the various interested parties, including shipowners' and seamen's organizations, who were asked to return it with any changes they might wish to propose. At a meeting held in September, 1924, the Commission recommended that the question of the international codification of regulations relating to seamen's articles of agreement, should be placed on the agenda of the 1926 Session of the Conference, the Commission being given an opportunity for further examining the preliminary draft in the matter.—(LABOUR GAZETTE, September, 1924, p. 778, November, 1924, p. 960).

After a discussion of the general principles, the Commission finally adopted the following resolution:—

The Joint Maritime Commission are of the opinion that a suitable basis for the international standardization of the provisions relating to the agreement with the crew and the maintenance of discipline on board ship, is only to be found by the adoption of the principles which at present are generally recognized, and note that in the opinion of the shipowners' section the draft proposed by the International Labour Office does not comply with this condition; and in order to assist the International Labour Office, propose that a sub-committee be formed for the purpose of drafting rules upon the foregoing basis, the sub-committee to consist of a representative of the seamen and a representative of the shipowners, together with their legal

advisers and the legal advisers of the International Labour Office; such report to be submitted to the various members of the Joint Maritime Commission within a fortnight.

The report of the proceedings concludes:—

It must be admitted that the discussions of the Joint Maritime Commission suggest very serious reflections when considered strictly from the point of view of the International Labour Organization.

In the first place, it must be asked whether the conception which has been adopted of an international codification of rules and principles relating to seamen's articles of agreement and to discipline which are common to all legislation, really corresponds to the original idea of the Genoa Conference. It appeared in the course of the discussion that there had been a misunderstanding from the outset. The Genoa Conference had intended to define the status of the seaman, or in other words, to lay down internationally what his legal position should be. The original idea of defining the status of the seaman, which had been perhaps the main reason for calling the Genoa Conference, has been reduced to the idea of a codification. From this point of view it was not surprising that the shipowners and their legal advisers should have insisted that the Code should be strictly limited to the few rules which seem to be common to all systems of maritime legislation.

Because of failure to wear goggles while working at an emery wheel, as required by regulation 49 of the Workmen's Compensation Board, an employee of a Calgary firm was brought before a magistrate in the police court recently under the Workmen's Compensation Act. The man, who had suffered an injury to his eye through his carelessness, was convicted and ordered to pay the cost of the court. It is stated to have been the first case of its kind brought in the local court.

The Ontario Department of Industrial Hygiene has been making a survey of hygienic conditions in an Abitibi paper mill, with a view to providing more comfortable conditions for the men. The investigation will last for several months in order to ensure correct deductions. Tests will be made in midsummer, again in the fall and in the depth of winter. Modern hygiene does not put so much stock in temperature and humidity in the atmosphere as it does in the cooling power of the air.

The coroner's jury in rendering a verdict in connection with the death of a construction labourer who fell through a hole on the third floor of a structure on which he was working, added a rider to the verdict as follows: "We find from the evidence that there was no negligence on the part of the company, and we exonerate them from all blame. We recommend, however, that all openings in the floor of cement construction buildings be protected from the floor surface before the work of stripping is commenced."

SECOND INTERNATIONAL CONFERENCE OF LABOUR STATISTICIANS, GENEVA, APRIL 20-25, 1925

THE Second Conference of Labour Statisticians was held at Geneva from April 20 to April 25 having been called by the Governing Body as a result of decisions at its 21st and 22nd sessions, January 29, 1924, and April 8, 1924, respectively. The First Conference had been held in October, 1923, and dealt with (i) Classification of Industries; (ii) Index numbers of wages; (iii) Industrial accident statistics.

The Government of Canada was represented at the first Conference by Mr. R. H. Coats, Dominion Statistician, formerly editor of the *LABOUR GAZETTE* and Chief Statistician of the Labour Department. At the Second Conference Canada was represented by Mr. W. R. Tracey, of the Dominion Bureau of Statistics, formerly of the Labour Department.

The agenda of the Second Conference was as follows: (a) Classification of Industries; (b) Cost of Living Index Numbers; (c) Statistics of Real Wages; (d) Unemployment Statistics. On each of these subjects the International Labour Office had prepared a preliminary report, including in the case of the cost of living and unemployment statistics draft resolutions, which were taken as the basis of discussion.

Classification of Industries

The classification of industries had been one of the items of the agenda of the First Conference, and the resolution adopted then called upon the International Labour Office to draw up a list of the principal industries common to most industrial countries, regarding which statistics and other information are required. This was done in collaboration with the Secretariat of the League of Nations and the list was submitted to the Second Conference. Here it was recommended that this list should be communicated to the governments of the various countries with an invitation to inform the International Labour Office of the difficulties which they would experience in adopting it, and to suggest where the draft list might be reduced or expanded.

Cost of Living Index Numbers

In considering the index numbers of wages and real wages the First Conference had expressed the desire that at a future conference the calculation of index numbers of the cost of living should be taken up, with the object of securing agreement upon and putting into practice more uniform methods. At the

Second Conference a report by the International Labour Office was presented, dealing with the object and nature of index numbers, the items to be included, weighting, changing of items and quantities, methods of collection of data, localities to be covered, selection of sources of information, avoidance of differences in quality of articles at different dates, frequency of collection and publication of data and methods of calculation. An appendix dealt with the inclusion of the item of direct taxation, and another gave a description of the cost of living statistics published in various countries. The Conference recommended that statistics should be published in each country showing changes in the cost of living covering food, clothing, heating and lighting, rent and miscellaneous groups, each group including the most important items of consumption and especially those items the price changes of which may be taken as representative of changes in prices of articles not included. The index numbers should be weighted according to the consumption of industrial workers generally. Separate index numbers should be calculated for such districts or classes of workers as in any country showed any marked differences.

"In view of the existing inadequacy of statistics of consumption, the most satisfactory method of determining the weights of the different items and groups appears to be that based on a standard family budget obtained as the result of an enquiry into the average expenditure of a number of families during a given period."

It was recommended that in countries where no family budget inquiries have been held since 1920-1921, such inquiries should be undertaken, if possible, not later than 1928, and that all countries should adopt the same year as base, 1930 being suggested. The desirability of the publication in full of the methods of calculation of the index numbers and of the prices data was emphasized.

Statistics of Real Wages

The First Conference dealt with this question, recommending the adoption by the International Labour Office of the proposal of the British delegate that the International Labour Office should take over and develop the collection and publication of the statistics of Real Wages begun by the British Ministry of Labour in 1923. (*LABOUR GAZETTE*, August, 1923, June, 1924.) This was done, the first publication by the International Labour Office

appearing in the October issue of the International Labour Review. (LABOUR GAZETTE, December, 1924.) Statistics of rent were dealt with as well as statistics of food prices in relation to wage rates for certain classes of labour in the countries included in the calculation. The Second Conference recommended that a second series of statistics be published along with the first measuring the relative standards of living of the working classes in the different countries, basing the calculations on the actual earnings of working class families, and taking account of the physiological needs of the population due chiefly to climate and race, giving in greatest detail the original figures, the methods of calculation adopted and any reservations necessary.

Unemployment Statistics

The Conference recommended that in countries in which a widespread system of unemployment insurance exists, the information obtained from the working of such a system forms the best basis for unemployment statistics and that the statistics should show: annually, the total number of workpeople insured related to the total number of workers; monthly, the number of unemployed in receipt of benefit and the total number unemployed whether in receipt of benefit or not; monthly, the percentage which the number unemployed forms of the estimated number of insured workpeople; annually, the total amount paid during the year in benefits. It was also recommended that where statistics from unemployment insurance were not available it was desirable to obtain statistics of unemployment from workers' organizations showing each month the number unemployed and the percentage of these to the total membership and, annually, the number of persons covered by the inquiry as a percentage of the total number of workers in the occupation or industry concerned. It was recommended further that even where statistics were available from unemployment insurance administration any reliable trade union unemployment statistics should be continued.

The Conference also recommended that statistics derived from public employment offices should give the number of workpeople registered on a given day of the month as seeking work, the total number of vacancies unfilled that day, the number of workers' applications of vacancies notified, and of vacancies filled during the month; also that employment exchange statistics should distinguish as far as possible unskilled workers from others. It was also recommended that statistics of employment should be published periodically, prefer-

ably monthly, based on returns made by a representative number of employers.

In regard to countries where statistics of the above nature were not obtainable, it was recommended that special inquiries be made at the time of the population census, and at any industrial or occupational census or otherwise, as to unemployment in the whole of the population or an adequate sample thereof.

It was suggested that the statistics should distinguish males and females and show separate occupations and industries, using the classification of industries and occupation adopted for the general population census.

In regard to the publication of the data it was recommended that each country should give precise and detailed information as to methods adopted, forwarding copies of the forms used to the International Labour Office, giving an estimate as to the representative value of its statistics in relation to "ideal statistics" which would show the total number of persons whose normal means of livelihood is employment under contract of service as well as those persons not hitherto wage earners who seek to become so and that the unemployment measured should exclude that due to sickness, invalidity, participation in trade disputes, voluntary absence from work, and that the necessary condition for being counted as unemployed is that the individual must have been not at work for one day at least.

It was also recommended that the statistics from various sources for each country (insurance, trade union, employment exchanges, etc.) should be presented together, preferably in graphic form, also that statistics of short-time employment should be given separate from whole-time employment.

The Public Safety League of Quebec held a meeting at Montreal on May 19 for the purpose of devising means for the prevention of accidents due to asphyxiation by gas fumes. Mr. Arthur Gaboury, general manager and secretary of the League, advocated the systematic instruction of employees to give them sufficient knowledge to guard themselves against this danger. The actual cause of accidents should be studied, only qualified workmen should be employed and old pipes should not be used for repairs. Bad ventilation was considered to be one of the most frequent causes of accidents of this class. A resolution was adopted proposing that municipalities should require the installation in all dwelling houses of a funnel two feet six inches in width above every gas installation.

EMPLOYMENT AND WAGES IN VARIOUS INDUSTRIES IN CANADA

THE Dominion Bureau of Statistics recently issued reports on the linseed-oil industry, the musical instrument industry and the oiled and waterproof clothing industry in Canada in 1923. Previous reports in this series relating to other industries were outlined in the LABOUR GAZETTE for May, 1925, and previous issues.

Linseed-oil Industry

The report on this industry covers the operations of 8 plants, 3 of which were situated in the province of Quebec, 2 each in the provinces of Ontario and Manitoba and 1 in the province of Alberta. The total capital invested in 1923 was \$2,818,291, an increase over that in the previous year of \$173,795, consisting principally of stocks of materials and supplies on hand. There was a decrease in the quantity of raw and boiled linseed oils produced as compared with 1922 amounting to 117,464 gallons, but on account of more favourable market conditions the price realized exceeded that of the previous year by \$343,976. In the production of oil cake and oil cake meal there was also a decrease in quantity of 1,962 tons, and in value of \$185,993.

The total number of persons employed during the year was 249 (241 male and 8 female), or less by two than in 1922, and the amount paid in salaries and wages was \$299,906. There were 9 salaried officers, who received for their services \$25,000; 10 superintendents, managers, etc., who received \$23,540; 2 technical experts, who received \$5,319; 19 (13 male and 6 female), clerks, stenographers, salesmen and other salaried employees, who received \$28,703; and an average of 209 wage earners (207 male and 2 female), who received \$217,344. Employment reached its maximum in the month of December, when 228 persons were on the pay-roll, and its minimum in September with 171. The average number of days each plant was in operation on full time was 218.62; on part time, 37.88; and the average number of days idle was 47.50. The hours worked by employees per day or shift averaged 9.75 and per week 58.

Musical Instrument Industry

This report includes firms engaged in the manufacture of musical instruments, materials for same, phonographs and gramophones. It covers the operations of 64 establishments of which 45 were in the province of Ontario, 15 were in Quebec and one in each of the provinces of Alberta, British Columbia, Manitoba and Nova Scotia. The total capital

invested in the industry during the year was \$13,514,530, as compared with \$13,776,790 in the previous year. Ontario was the only province in which an increase in capitalization was shown. The total value of all products for the year was \$10,155,705, as compared with \$9,919,371 in the previous year.

The total number of employees of all classes rose from 2,971 in 1922 to 3,064 in 1923 (2,803 male and 261 female), an increase of 93. There was a corresponding expansion in the total pay-roll over the same period. In 1922 the total salary and wage payments amounted to \$3,421,374, whilst the amount reported for 1923 was \$3,499,050, an increase of \$77,676. There were 49 (48 male and 1 female), officers of corporations, who received for their services \$172,300; 57 general superintendents, who received, \$186,351; 19 (17 male and 2 female) technical experts, accountants, etc., who received \$31,710; 201 (111 male and 90 female) clerks, stenographers, salesmen, etc., who received \$250,893; and an average of 2,734 employees on wages (2,566 male and 168 female), who received \$2,855,632. There were also 4 male outside piece workers, who received \$2,164 for their services. The month in which the maximum number of employees were at work was February, with 3,004. The minimum number reported was 2,594 in August. The average days the plants were in operation on full time was 249.2, and on part time 34.5, while the average number of days idle was 20.3. The average hours worked by wage earners per day or shift was 8.9 and per week 50.3.

Oiled and Waterproof Clothing Industry

In the report on the oiled and waterproof clothing industry, operations were reported from 15 establishments of which 8 were in the province of Quebec, 5 were in Nova Scotia and 2 in Ontario. The amount of capital employed in the industry during 1923 was \$820,013 as compared with \$1,592,589 in the previous year. To this decrease fixed capital contributed \$693,021, whilst working capital was accountable for \$79,555. The total value of all products in 1923 was \$846,817, as compared with \$940,331 in 1922.

The total number of employees fell from 246 in 1922 with a pay-roll of \$219,827, to 202 (101 male and 101 female), in 1923 with a total salary and wage payment of \$209,081, a decrease of 44 employees and \$10,746 in wages. Salaried officers of corporations totaling 3 (2 male 1 female), received for their

services \$6,000; 9 male superintendents and managers received \$22,200, and 2 males classified as technical experts and accountants received \$2,320; 26 clerks, stenographers, etc., (16 male 10 female) received \$40,073; an average of 152 employees on wages (71 male and 81 female) received \$137,968; and 10 outside piece workers (1 male and 9 female), received \$520. The maximum number of em-

ployees was 186 in the month of March, whilst the minimum was in August with 119. The average days the factories were in operation on full time was 220.4 and on part time 24.8. The average number of days idle was 58.8. The average hours worked by wage earners per day or shift was 8.2 and per week, 46.9. In two establishments all work was done by contract.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF MAY, 1925, AS REPORTED BY EMPLOYERS

FURTHER and pronounced improvement in the employment situation was indicated on May 1, when 5,923 firms reported that they had increased their working forces by 31,582 persons, or from 716,866 on April 1 to 748,448 at the beginning of May. This expansion, which to a considerable extent represents seasonal activity, is on a much larger scale than that reported on May 1, 1924. The situation, however, continues to be slightly less favourable than on the same date of last year and of 1923. The index number, based on the number employed on January 1, 1920, as 100, stood at 90.8, as compared with 87.2 on April 1, 1925, and with 91.8, 91.4, 83.3 and 84.1 on May 1, 1924, 1923, 1922 and 1921, respectively. The accompanying chart reflects the course of employment since 1923. If the experience of the last few years is repeated, continued and more extensive improvement may be looked for at the beginning of June.

The most important increases at the beginning of May were reported in manufacturing and construction. Transportation, trade, communication, services and mining (exclusive of coal mining) also registered heightened activity.

Employment by Provinces

All the provinces shared in the upward movement; the gains in Ontario and Quebec affected the largest number of workers, but the percentage increases in the various economic areas did not differ greatly.

Maritime Provinces.—Manufacturing, especially fish canneries and lumber mills, showed greater activity, while construction and quarrying also afforded more employment. Transportation, on the other hand, reported large reductions, mainly on account of the resumption of operations at the St. Lawrence ports. The 545 firms making returns increased pay-rolls from 62,442 persons on April 1 to 64,947 at the beginning of May. This expansion affected practically the same number of

workers as that noted on the same date of last year.

Quebec.—There was a distinctly favourable movement on the whole in Quebec; manufacturing, logging, transportation, construction and trade recorded the most important gains. Within the manufacturing group, the greatest improvement was in lumber, tobacco and pulp and paper works, while the only pronounced declines took place in leather footwear factories. Railway and highway construction and maintenance absorbed large numbers of extra workers, but building contractors released employees. The working force of the 1,271 firms reporting aggregated 207,934, or 9,896 more than on April 1. This gain of 5 p.c. exceeds that registered on May 1, 1924, when the index number was practically the same as on that date in this year.

Ontario.—According to statistics compiled from 2,687 employers, they increased their staffs from 299,279 persons on April 1 to 311,311 at the beginning of May. Construction, manufacturing, transportation and trade showed most improvement, but quarrying and metallic ore mining were also more active. Logging camps continued to let out men, but the reductions were decidedly less extensive than in the preceding month. Within the manufacturing division, lumber mills reported important seasonal expansion, and iron and steel, clay, glass, mineral product, rubber and pulp and paper works also recorded substantial gains. At the beginning of May, 1924, the increases were on a considerably smaller scale.

Prairie Provinces.—Marked seasonal activity in railway construction and maintenance, together with increases in manufacturing and communication, much more than offset curtailment in logging, coal mining and transportation. The result was a gain of 3,992 persons in the pay-rolls of the 780 firms reporting, who employed 93,920 workers on May 1. This improvement is much more pronounced than that indicated on the same date of last year.

British Columbia.—The largest additions to staffs were noted in manufacturing, especially in lumber mills and fish canneries, and in construction, while logging registered the only marked reductions in employment. The general increase was considerably greater than that which took place on May 1, 1924. Reports were tabulated from 636 employers, having 70,336 workers, or 3,157 more than at the beginning of April, 1925.

struction, trade, services and communication also reported important additions to payrolls. The expansion on May 1, 1925, exceeded that indicated on the same date of last year, although the index number then was very slightly higher than at the present time.

Quebec.—Reductions in construction, and on a smaller scale, in boot and shoe factories, were partly offset by improvement in shipping. There was a net decrease of 594 persons in

The following table gives index numbers of employment in the five economic areas into which the country is divided.

Number Employed, January 1920 = 100

District	Relative Weight*	May 1, 1925	April 1, 1925	May 1, 1924	May 1, 1923	May 1, 1922	May 1, 1921
Maritime Provinces	8.7	86.6	83.4	88.1	90.0	83.0	87.5
Quebec.....	27.8	94.2	89.8	94.1	90.3	81.2	80.8
Ontario.....	41.6	87.7	84.9	89.8	91.6	82.4	83.6
Prairie Provinces...	12.5	88.0	84.1	89.4	90.4	85.4	86.6
British Columbia..	9.4	105.1	100.1	102.9	97.5	91.3	90.1
Canada.....	100.0	90.8	87.2	91.8	91.4	83.3	84.1

*The term "relative weight" is explained in the last paragraph of the accompanying.

Employment by Cities

Improvement was shown in all the cities for which separate tabulation are made, except Quebec.

Montreal.—The staff of the 694 Montreal firms from whom returns were received totalled 104,849, or 3,945 more than on April 1. There were fluctuations in employment in manufacturing, but the favourable trend predominated; tobacco, brewing, electric current, iron and steel and printing showed the greatest increases, while boot and shoe, textile, rubber and electrical appliance works registered the most extensive losses. Transportation, con-

struction, trade and communication also reported important additions to payrolls. The expansion on May 1, 1925, exceeded that indicated on the same date of last year, although the index number then was very slightly higher than at the present time.

Toronto.—A further large increase was recorded in Toronto, the gain being more extensive than that shown on May 1, 1924, when conditions in this city were not so good. As compared with the preceding month, a more favourable situation was noted in manufacturing; gas, iron and steel, brick and glass works reported the most marked increases, which on the whole were not particularly large. Construction, trade and transportation were very much more active. An aggregate working force of 93,700 persons was employed by the 778 firms making returns, who had 91,667 workers at the beginning of April.

Ottawa.—The 126 firms from whom statements were received increased their payrolls from 9,204 persons in the preceding month to 9,645 at the beginning of May. Construction showed the greatest gain, but there were also small additions to staffs in manufacturing. The situation on May 1, 1924, was more favourable than at the present time.

Hamilton.—Manufacturing establishments generally were more active than in the preceding month, the largest increases being in iron and steel and rubber; other industries also registered slight gains. The working forces of the 200 firms reporting totalled 24,983, as compared with 24,303 on April 1. Employment at the beginning of May of last year

was in greater volume, although the additions to staffs then were on a smaller scale.

Winnipeg.—Building contracts afforded more employment and manufacturing also showed general improvement. Statements were received from 295 Winnipeg firms employing 24,153 workers, or 292 more than in the preceding month. This increase is only slightly larger than that which occurred on May 1, 1924, when the index number was below its present level.

Vancouver.—Lumber mills in Vancouver registered seasonal activity and other branches of manufacturing were also busier, as was trade. Transportation, on the other hand, was slacker. The payrolls of the 227 reporting firms aggregated 22,628 persons on May 1, as compared with 22,356 in their last report. The level of employment was higher than on the same date of any other year of the record.

The following table gives index numbers of employment by cities:—

Number Employed January, 1920=100

	Relative Weight	May 1, 1925	Apr. 1, 1925	May 1, 1924	May 1, 1923	May 1, 1922
Montreal.....	14.0	91.7	88.5	92.3	88.8	82.1
Quebec.....	1.1	91.9	98.4
Toronto.....	12.5	86.9	85.1	85.6	88.1	84.9
Ottawa.....	1.3	91.8	87.5	98.3	94.8
Hamilton.....	3.3	82.4	80.3	86.4	92.6
Winnipeg.....	3.2	85.4	83.7	83.0	86.3	88.6
Vancouver.....	3.0	104.0	102.5	102.2	91.8	95.4

Manufacturing Industries

There were further pronounced increases in employment in manufacturing, according to statements from 3,858 firms employing 426,792 operatives, as compared with 415,002 at the beginning of April. This increase is considerably larger than was the expansion indicated on May 1, 1924. Lumber mills and fish canneries reported very substantial gains; pulp and paper, tobacco, brewing, clay, glass, iron and steel, gas, and petroleum and electric current plants employed more workers than in the preceding month. On the other hand, leather, boot and shoe factories released a large number of employees, and textile, flour and electrical apparatus works were also slacker.

Animal Products—Edible.—Seasonal improvement on a larger scale than in preceding years was indicated in fish canning, smoking and curing establishments and in dairies. While all provinces shared to some extent in the expansion, the increases in the Maritime Provinces and British Columbia were much

the largest. Returns were tabulated from 189 manufacturers whose staffs stood at 14,296, or 1,692 more than on April 1. The situation continues to be better than at the beginning of May of last year.

Leather Products.—Boot and shoe works were decidedly less fully employed; Quebec firms reported the greatest losses, but there were also declines in the Maritime Provinces and Ontario. The 194 employers reporting released 1,097 workers from their payrolls, which aggregated 15,177 at the beginning of May. This contraction exceeded that registered on May 1, 1924, when employment was above its present level.

Lumber and Products.—Employment in lumber mills increased more extensively than at the beginning of May in any other year of the record. There were also small gains in other branches of this group, in which the 733 manufacturers making returns employed 48,864 persons as compared with 41,719 on April 1. The increases were widely distributed over the country, those in Ontario being largest. The index number stood a few points higher than at the beginning of May in the past four years.

Plant Products—Edible.—Varying conditions were indicated in different divisions of the edible plant product industries, flour and other cereal mills, sugar refineries, chocolate and cocoa factories were slacker, while improvement was indicated in starch and glucose and canning plants. The result was a loss of 199 persons in the staffs of the 303 manufacturers making returns, who employed 24,694 workers on May 1. There were small net declines in all provinces. Employment on the same date of last year had increased, but the index number then was about the same.

Pulp and Paper Products.—The production of pulp and paper afforded employment to a larger number of persons than in the preceding month. Printing and publishing establishments were also slightly busier. Statements were tabulated from 462 manufacturers having 51,240 employees, as compared with 50,476 in their last report. The bulk of the gain took place in Quebec and Ontario. This expansion is more extensive than that indicated at the beginning of May, 1924, when the index number was slightly under its present level.

Rubber Products.—Rubber factories in Ontario reported increased activity, while elsewhere little change was shown. Thirty-one manufacturers of rubber products employed 11,899 workers, or 196 more than on April 1. The volume of employment is greater than on May 1 of last year, on which date improvement had also been indicated.

Textile Products.—Additions to staffs were recorded in headwear factories, but the thread, yarn and cloth, garment and personal furnishing and some other divisions registered a falling off in activity. The result was a net decline of 313 persons in the staff of the 528 manufacturers reporting, who had 69,405 employees on May 1; this is the first reduction shown since the beginning of the year and is considerably smaller than that indicated at the beginning of May of a year ago, when the index number was a little lower.

Tobacco, Distilled and Malt Liquors.—There was marked improvement in the employment afforded in tobacco works and breweries, mainly in Quebec and Ontario. An upward movement had also been in evidence on May 1, 1924, although the gains then were not so pronounced as on the date under review. Returns were compiled from 103 employers, whose staffs included 11,257 workers, as against 10,447 on April 1, 1925.

Chemicals and Allied Products.—The production of drugs and other chemical goods gave employment to a greater number of persons on May 1 than at the beginning of April, especially in Ontario. A combined working force of 6,535 was registered by the 115 manufacturers from whom statistics were received; they had 6,372 employees in their last report.

Clay, Glass and Stone Products.—Glass, brick and tile works in Quebec, Ontario and the Prairie Provinces were more fully engaged than in the preceding month. The gains exceeded those recorded on May 1 of last year, but employment then was in greater volume. Statements tabulated from 117 manufacturers showed that they employed 8,268 workers, or 780 more than on April 1.

Electric Current.—Plants producing electric current in Quebec and Ontario reported larger working forces than in the preceding month, having increased their staffs from 11,407 on April 1 to 11,914 at the beginning of May. The improvement is seasonal, although slightly more extensive than in preceding years, when employment was lower.

Electrical Appliances.—Factories turning out electrical apparatus registered decreased activity, chiefly in Quebec. A combined working force of 8,705 persons was employed by the 34 establishments making returns; this was 160 less than at the beginning of April. Employment on May 1 of a year ago had increased.

Iron and Steel Products.—Further, though less extensive additions to staffs were recorded in iron and steel works; general plant machinery and railway car shops reported the

largest gains, while foundries, machine shop and agriculture implement works were rather slacker. In the Maritime and Prairie Provinces there were contractions, but firms in Ontario and Quebec afforded more employment. A reduction in personnel had been indicated on May 1, 1924, although the situation then was better than at the present time. The working force of the 652 manufacturers from whom statistics were tabulated aggregated 115,965, or 768 more than on April 1, 1925.

Mineral Products.—Considerably increased activity was shown in this division, the largest gains taking place in gas and petroleum works in Quebec, Ontario and the Prairie Provinces. The improvement on the same date of last year gave employment to a slightly greater number of workers, but the index number then was below its present level. Returns were tabulated from 73 manufacturers having 9,772 employees on May 1, 1925, as compared with 9,158 in the preceding month.

Logging

There were marked fluctuations in employment in logging at the beginning of May; important increases owing to river driving operations in Quebec were offset by further declines in Ontario, the Prairie Provinces and British Columbia. The result was a reduction of 176 in the staffs of the 225 firms reporting, whose staffs aggregated 18,812 men. Employment was in less volume than on May 1 of a year ago, when similar declines were noted.

Mining

Coal Mining.—Operators in the Prairie Provinces made further reductions in working force, while the strike in Nova Scotia continued to affect the situation in coal mines there. The 91 employers whose returns were tabulated reported 24,383 workers, as compared with 24,905 on April 1. Substantial improvement was shown at the beginning of May, 1924, and the situation then was more favourable.

Metallic Ores.—Metallic ore mines in Ontario reported greater activity, but in British Columbia there were minor declines. Statements tabulated from 46 firms showed that they employed 13,802 workers, or 117 more than on May 1. The increase is smaller than that registered on May 1 a year ago, but the index number then was below its present level.

Non-Metallic Minerals other than Coal.—Quarrying in the Maritime Provinces, Ontario and the Prairie Provinces employed a larger number of workers than in the preceding

month. The upward movement in the non-metallic mining group repeats that indicated at the beginning of May last year; employment then, however, was better than at the present time. An aggregate working force of 5,478 persons was reported by the 70 firms making returns, who had 4,890 employees on April 1, 1925.

Communication

Telegraphs and telephones afforded increased employment, there being fairly general gains in both groups throughout the country. The pay-rolls of the 165 companies reporting were enlarged by 424 workers, to 22,825 at the beginning of May. This improvement is very similar to that noted on May 1, 1924, but the index number then was slightly lower.

Transportation

Street Railway and Cartage.—Marked improvement was shown in employment on street railways, and cartage companies were also more fully employed, owing to the usual removals on May 1. The largest gains were in Quebec. Statements were received from 113 employers having 18,719 employees, or 543 more than on April 1. The additions to staffs recorded at the beginning of May of last year exceeded those noted on the date under review, and conditions then were somewhat better.

Steam Railways.—Continued, but smaller reductions in employment were noted in the operation departments of steam railways, the

Maritime and Prairie Provinces recording the bulk of the contraction. The 103 concerns and divisional superintendents reporting had 70,815 workers, as compared with 70,974 in the preceding month. On May 1, 1924, improvement had been shown and employment then was on a somewhat higher level.

Shipping and Stevedoring.—Owing to the resumption of operations at the summer ports, there was a considerable net increase in the personnel of companies engaged in water transportation, in spite of a seasonal decline in the Maritime Provinces. The situation at the first of May was practically the same as on that date of last year, when the increases were on a smaller scale. Reports compiled from 56 employers showed that they had 12,081 persons on pay-rolls, as compared with 10,584 in the preceding month.

Construction and Maintenance

Building.—Building contractors registered further and larger seasonal gains, which exceeded those indicated on May 1, 1924 or

*An explanation of term "Relative Weight" is given on this page.

1923. The index number now stands much higher than at this time of any other year of the record. An aggregate working force of 21,335 persons was employed by the 309 firms making returns; this was 2,530 more than at the beginning of April. The additions to staffs in Ontario were more extensive, while in Quebec there were contractions in this industry, probably of short duration.

Highways.—An important increase in the number employed on highway construction was shown by the 99 employers making returns. There staffs rose from 4,059 in their last report to 7,142 on the date under review. There was expansion in all provinces. The improvement noted at the beginning of May of last year was on a smaller scale.

Railways.—Extension and maintenance work on railroads absorbed a great many more men than at the beginning of April. The number added largely exceeds that of May 1, 1924; much greater activity in this direction is indicated at the present time. The 33 companies and divisional superintendents reporting had 35,946 persons in their employ, or 10,730 more than at the beginning of April. There were pronounced increases in all provinces, but Ontario and the Prairie districts registered especially noteworthy gains.

Services

Improvement was indicated in hotels and restaurants and also in laundries. According to returns from 171 firms, their staffs aggre-

gated 13,528, as compared with 13,283 on April 1. A favourable tendency was also noted on May 1, 1924, but employment then was in somewhat smaller volume.

Trade

Retail establishments in Quebec, Ontario and British Columbia increased their sales force considerably. Wholesale trade was also more active. Employment in trade usually increases at this time of year, but in 1924 and 1923 the additions to staffs were smaller than this year. The index number now stands higher than in the early part of either of those years. Statements were tabulated from 584 firms employing 56,790 persons on May 1, or 892 more than in the preceding month. Of this number, some 700 were added to the staffs of retail merchants.

The accompanying table gives index numbers of employment by industries as at the first of May and April, 1925, as compared with May 1 of the last four years. The columns headed "Relative Weight" in the tables in this article showed the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on May 1, 1925.

The United States Secretary of Labour in his report to Congress recommended that the Department of Labour should be given the authority, the men, and the money to enable it to undertake real industrial safety research work, either through the present Bureau of Labour Statistics or some other agency. Legislation for this purpose, he claimed, should include the following:—

Provisions for the collection of all information, data, and statistics as to industrial accidents and their prevention, and industrial diseases and their prevention, by the Federal Department of Labour, in co-operation with the various State agencies engaged in this work. Provision for the maintenance by the Department of Labour at Washington of an industrial safety exhibit, where could be gathered together for the benefit of American industry as a whole, models, devices, plans, and methods for safeguarding the worker in American industry. This exhibit should be a thorough and complete exposition of every machine or method proved by experience to be a contribution to the advancement of safety in industry.

By a vote of four to one, the United Mine Workers of District 14 (Kansas, U.S.A.) have voted a special assessment of four per cent of gross earnings for the benefit of unemployed members. A similar proposal was defeated by a large majority a few months ago.

EMPLOYMENT OFFICE REPORTS FOR APRIL, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of April, 1925, showed a considerable gain over that of the preceding period, there being an increase of over 50 per cent in average daily placements. A slight improvement was also shown as compared with the corresponding period a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications showed a rapid and marked rise during the first half of April, this ratio remaining practically the same during the latter half of the month, and being on a distinctly higher level than that shown during the preceding month. The ratio of opportunities to applications was, however, slightly lower than that attained during the same period last year. The ratio of vacancies to each 100 applications was 83.6 and 81.2 during the first and second half of April, 1925, in contrast with the ratio of 88.4 and 92.7 during the same periods in 1924. The ratio of placements to each 100 applications during the periods under review was 75.0 and 74.1, as compared with 71.6 and 76.8 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications reported during the first half of April was 1,931, as compared with 1,506 daily during the preceding period, and with 1,532 daily during the corresponding period of 1924. Applications for work during the latter half of the month registered 1,688 daily, in contrast with 1,771 daily during the latter half of April a year ago. Employers notified the Service of a daily average of 1,613 vacancies during first half, and 1,371 during the latter half of the month under review, as compared with a daily average of 1,354 and 1,642 vacancies during the month of April, 1924. Vacancies offered to the Service during the latter half of March, 1925, averaged 1,006 daily. The Service effected an average of 1,449 placements during the first half of April, of which 1,036 were in regular employment and 412 in work of one week's duration or less, as compared with a total average placement during the preceding period of 898 daily, and with 1,097 daily during the first half of

April, 1924. During the latter half of the month under review, placements averaged 1,251 daily (901 regular and 350 casual), as compared with an average of 1,361 daily during the corresponding period a year ago.

During April, 1925, the offices of the Service referred 33,544 persons to vacancies, and effected a total of 32,188 placements. Of these the placements in regular employment numbered 23,112, of which 19,670 were of men and 3,442 of women, while placements in casual work totalled 9,076. Opportunities for employment reported by employers numbered 25,683 for men and 9,880 for women, a total of 35,563. The number of applications for work was 43,166, of which 32,819 were from men and 10,347 from women.

The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (4 months).....	62,255	35,958	98,213

MARITIME PROVINCES

There was an increase of about 19 per cent in the number of vacancies listed during April over the preceding month, but nearly 27 per cent less than during 1924. The decrease in the latter comparison was due to reduced orders for river drivers in New Brunswick and household workers in Nova Scotia. Placements in Nova Scotia were about 25 per cent less than in April, 1924, and in New Brunswick a decrease of nearly 17 per cent was recorded. In the manufacturing divisions placements were almost entirely confined to lumber products, edible animal products and iron and steel products. The latter showed declines from April of last year, but this was more than counterbalanced by increased placements in sawmills and allied woodworking establishments. Construction had not yet opened up to any extent, and the demand for workers was small. There was very little demand for river drivers, orders received by New Brunswick offices being considerably less than during April of last year. Placements in the trades and services divisions compared quite favourably with the corresponding month of last year, but the majority of work offered was casual. During

the month under review, 228 men and 66 women were placed in regular employment in Nova Scotia, and 131 men and 79 women in New Brunswick.

QUEBEC

During April opportunities for employment increased more than 36 per cent over the preceding month, but were nearly 4 per cent less than during April, 1924. Placements, however, were higher in both comparisons, the gain over last year being more than 14 per cent and over March, 1925, more than 24 per cent. Orders from logging firms decreased from last

the corresponding month of last year, farm orders and the opening of navigation on the Great Lakes being mainly responsible for the increase in the former comparison. Placements were 17 per cent higher than in March and 6 per cent in excess of April, 1924. Employment was provided for 1,300 persons in the manufacturing industries, of whom 423 were placed in iron and steel and 175 in saw-mills and woodworking industries. Six hundred and seventy-one placements were effected in logging, chiefly river drivers. Farm placements numbered 1,257, a gain of nearly 40 per cent over the preceding month. Work

year, but more opportunities for employment were afforded in building construction and domestic service. Placements in the construction group numbered 297, of which 259 were in building construction. More than 50 per cent of the placements for the province were in the service group, and of these over 75 per cent were of household workers. Placements in the logging industry numbered 168, chiefly river drivers. There was very little call for workers in the manufacturing industries, and only 53 placements were effected. Total placements in regular employment during April numbered 685 of men and 487 of women.

ONTARIO

Opportunities for employment during April increased nearly 24 per cent over the preceding month and were also higher than during

was secured for 508 applicants in the transportation division, 347 of whom were placed in shipping and stevedoring. Improvement over April, 1924, was indicated in the construction and maintenance group, placements numbering 3,612, of which 1,541 were on railway, 1,101 building and 970 highway. Services again showed an increase over the preceding month and 3,866 placements were effected. Nearly two-thirds of these positions, however, were in casual work. Total placements for Ontario during April in regular employment numbered 7,204, of which 6,168 were of men and 1,036 of women.

MANITOBA

During April 4,498 orders were received by Manitoba offices, an increase of about 37 per cent over the preceding month and 18 per cent

over April of last year. The gains in both comparisons were due to increased demand for farm and household workers. Placements numbered 4,432, a gain of nearly 55 per cent over March and more than 30 per cent over April, 1924. Farm work was secured for 1,710 applicants and 2,190 placements were effected in the Service group; 1,619 of the latter positions were for household workers, more than 75 per cent of which being casual work. The balance of the positions filled were for the most part in building construction, trade and the various manufacturing industries. Placements in regular employment during the month totalled 1,993 of men and 550 of women.

SASKATCHEWAN

Orders received during April showed an increase of more than 100 per cent over March, but were about 10 per cent less than during the corresponding month of last year. The gain over the preceding month was chiefly due to increased orders for farm workers and for extra gang railway labourers. Placements numbered 5,122 as compared with 2,268 in March and 4,208 in April, 1924. Of the 5,122 placements effected during the month, those on farms numbered 3,612, service group 900, of which 441 were household, in railway construction and maintenance 362, building construction 127, the manufacturing industries 138, of which 78 were in lumber products. There were 4,392 placements of men and 508 of women in regular employment during the month.

ALBERTA

There was an increase of over 140 per cent in the number of vacancies listed during April over the preceding month, and more than 10 per cent over the corresponding month of last year. Placements were also in a higher ratio, particularly in the latter comparison where the total for April, 1925, was 5,349 as against 4,469 in April, 1924. Increased farm placements were mainly responsible for the gains although building construction also accounted for a number of additional placements. Of the total placements effected during the month, those on farms numbered 3,612, in the service group 900, of which 441 were household, in railway construction and maintenance 362, building construction 127, the manufacturing industries 138, of which 78 were in lumber products. There were 4,392 placements of men and 508 of women in regular employment during the month.

BRITISH COLUMBIA

Opportunities for employment were slightly higher than in March but about 14 per cent lower than during April, 1924. Placements

were 10 per cent lower in the latter comparison, but more than 12 per cent higher than in the preceding month. Placements in the manufacturing industries numbered 428, of which 269 were in sawmills and woodworking factories. Employment was secured in the logging industry for 374 bush and river workers. Farming placements totalled 541, the majority representing the transfer of workers to employment in the prairie provinces. Placements in mines totalled 60, of which 47 were in the mining of metallic ores. Construction provided employment for 711 workers, 313 of whom were placed in building construction, 133 in highway construction and 265 in railway construction and maintenance. Eighty-seven placements were effected in the transportation group, 55 of which were in shipping and stevedoring. Positions were secured for 997 persons in the services group, the majority being for household workers and the employment casual. Wholesale and retail trade provided work for 70 persons. Of the 2,148 placements effected in regular employment during the month, 1,907 were of men and 241 of women.

Movement of Labour

During April, 1925, the offices of the Employment Service of Canada made 23,112 placements in regular employment, of which 15,899 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,099 were granted the Employment Service reduced transportation rate, 1,252 going to points within the same province as the despatching office and 847 to other provinces.

Quebec offices issued 66 certificates, 15 to sawmill hands sent from Montreal to points within that zone, and the balance to bush workers and river drivers for whom employment had been secured in Ontario. Of the latter, 44 certificates were issued by Hull to North Bay, and 5 certificates from Hull and 2 from Montreal to Sault Ste. Marie. The offices in Ontario granted 277 transportation certificates, 190 covering provincial transfers and 87 interprovincial transfers. The interprovincial movement included 53 farm hands sent from Fort William to points in Saskatchewan, 17 farm hands from Port Arthur to Moose Jaw, 7 farm hands from Port Arthur to Winnipeg, 2 farm hands from Hamilton to Yorkton, 2 farm hands from Toronto, 1 to Brandon and 1 to Moose Jaw, and 6 river drivers from Pembroke to Hull. Of the provincial certificates Fort William issued 1 to a sheet metal worker travelling to Oshawa, 1 to a foreman sent to Toronto, 4 to farm hands, of whom London and Peterborough received 1 each, and

*51 placements effected by offices since closed.

2 were sent to points within the Fort William zone; one labourer and one cook also received certificates for placement within the zone. North Bay sent 1 saw filer to Sudbury. Peterborough placed 3 bush workers within their zone. Pembroke sent 9 mill hands and 1 camp clerk to Sault Ste. Marie, 1 construction foreman, 1 bushman and 1 mill hand to Timmins, 1 edgerman and 1 setter to Sudbury, and 1 lathe mill foreman to Port Arthur. Pembroke also issued 23 certificates to North Bay, including 14 bush workers, 7 mill hands, 1 fireman and 1 stationary engineer. Sudbury sent 3 farm hands to Guelph and issued 72 certificates to river drivers travelling to points within their zone. Port Arthur issued certificates to 38 bush workers, 7 miners, 1 farm hand and 1 teamster going to points within that zone. Ottawa sent 8 mill hands to Pembroke and 1 to Sudbury. The movement from Toronto included 2 carpenters, 1 timekeeper, 1 baker and 1 cook to Port Arthur, 1 edgerman to Sudbury, 1 mill hand to Sault Ste. Marie, 1 chef to Kingston and 1 tool maker to Windsor. In Manitoba 742 certificates were issued, 517 to points within the province and 225 to other provinces. Except for 8 certificates issued by Dauphin, 1 to a sawmill mechanic going to Edmonton and 7 to sawmill labourers placed in the Dauphin zone, all certificates were granted by Winnipeg. The interprovincial movement from Winnipeg included 6 cooks and cookees, 3 engineers, 20 carpenters, 30 labourers, 1 blacksmith, 8 bushmen, 1 farm hand and 3 female hotel and household workers to Port Arthur, 123 farm hands, 11 farm domestics and 8 female hotel workers to points in Saskatchewan, 1 farm hand to Edmonton and 1 blacksmith, 2 dumpmen and 1 cook to Drumheller. Provincial certificates issued by Winnipeg numbered 510, and were for 23 farm hands, 8 farm domestics and 6 hotel cooks and kitchen help going to points within the Winnipeg zone; 433 farm hands, 7 farm domestics, 5 hotel cooks and 4 waitresses sent to Brandon; and 1 engineer, 1 carpenter, 2 sawmill labourers, 10 fishermen, 4 farm hands and 1 cook to Dauphin. The offices in Saskatchewan granted 134 certificates for special transportation rate, 131 provincial and 3 interprovincial. The latter were issued by Regina, and covered the transportation of 1 farm hand to Brandon and 1 steward and 1 stewardess to Vancouver. Except for 9 river drivers and 16 sawmill labourers sent from Prince Albert and 22 teachers sent by Regina to points within their own zones respectively, all the provincial movement was of farm hands and

farm and hotel domestics, and included 77 farm hands, 3 farm domestics, 3 cooks and 1 waitress. In Alberta 406 certificates for the special transportation rate were granted, 306 to points within the province and 100 to other provinces. The latter with one exception, a farm labourer sent to Cranbrook, were all destined for farms in Saskatchewan and included 94 farm hands, one blacksmith and four female household workers. Movement within the province included from Calgary 15 construction labourers and 7 painters to points within that zone, one painter to Medicine Hat, one blacksmith to Lethbridge, one hotel porter to Drumheller, 35 farm hands and 10 female hotel and farm household workers to various points within the province. From Edmonton 180 farm hands, 1 miner, 1 stone mason, 2 stone cutters, 1 engineer, 1 planer man, 1 gardener, 1 clerk, 1 carpenter, 1 blacksmith, 2 millwrights, 1 edgerman, 16 bushmen, 11 labourers, 5 cooks, 1 waitress and 1 farm maid were sent to points within the Edmonton zone, 3 farm hands to Drumheller, 4 to Calgary and one to Lethbridge. Medicine Hat sent a farm cook to Calgary. The offices in British Columbia granted 474 certificates, 93 provincial and 381 interprovincial. All the latter were for farms in the Prairie provinces. Alberta received 204 farm hands and 3 cooks; Saskatchewan 160 farm hands, 3 cooks and 4 domestics and Manitoba 7 farm hands. Of the provincial certificates Nelson granted 2 to miners sent to Penticton, 2 to road labourers sent to Revelstoke, and 1 for a teamster placed within the Nelson zone. Penticton sent a farm hand to Nelson; Prince George sent 1 saw filer and 1 teamster to Prince Rupert, and 1 mill and 24 bush hands to points within their own zone. The movement from Vancouver included 1 stenographer, 4 miners and 7 saw mill workers to points within their zone and 1 farm hand and 1 stenographer to Vernon, 1 engineer, 4 farm hands, 2 cooks, 1 waitress and 1 orderly to Kamloops, 2 farm hands, 2 saw mill labourers, 5 bricklayers, 1 carpenter and 1 labourer to Nelson, 5 road workers to Revelstoke, 2 engineers, 1 machinist, 1 dairyman and 1 labourer to Penticton, 1 accountant, 2 engineers, and 3 saw mill workers to Prince George and 1 stenographer, 1 slater and 8 saw mill workers to Cranbrook.

Of the 2,099 workers who benefited by the Employment Service reduced transportation 677 were carried by the Canadian National Railway, 1,409 by the Canadian Pacific Railway, 12 by the Pacific Great Eastern and one by the Kettle Valley Railway.

BUILDING PERMITS ISSUED IN APRIL 1925

ACCORDING to returns from 60 cities, tabulated by the Dominion Bureau of Statistics, the value of the building permits issue in April showed the substantial increase of 77.9 per cent over March, 1925. There was also a gain of 12.1 per cent in the more significant comparison with April, 1924. The total for the month under review was \$15,042,519; for March, 1925, it was \$8,457,791 and for April of last year, \$13,422,456.

Returns in some detail were furnished by 51 cities, showing that they issued during April some 2,200 permits for dwellings, estimated to cost over \$8,000,000, and more than 3,500 permits for other buildings valued at approximately \$5,000,000. In addition, authority was granted for the construction of a grain elevator valued at some \$600,000 at Halifax, and a new paper mill estimated to cost over \$500,000 at Three Rivers, as well as for some smaller engineering works at Kitchener and Port Arthur.

All provinces recorded increases in the value of building permits issued as compared with March. The largest actual gains of \$2,845,503 and \$1,940,961 were in Ontario and Quebec, but New Brunswick and Nova Scotia showed the greatest proportional increases.

As compared with April, 1924, Prince Edward Island, Quebec, Ontario, and Saskatchewan reported percentage declines of 20.0, 13.6, 2.4 and 5.5, respectively, while elsewhere improvement was indicated. British Columbia registered the most pronounced actual gain of \$756,062, or 72.8 per cent, but the percentage increases in Nova Scotia and New Brunswick were larger.

Montreal and Toronto recorded increases in the building authorized as compared with March, 1925, but the value was slightly lower than in April, 1924. In Winnipeg and Vancouver there were gains in both comparisons. The permits issued in Halifax, Fredericton, Moncton, St. John, Shawinigan Falls, Three Rivers, Fort William, Galt, Guelph, Kitchener, London, Niagara Falls, Ottawa, Owen Sound, Port Arthur, St. Catharines, Sault Ste. Marie, Windsor, Ford, Walkerville, Brandon, Regina, Saskatoon, Calgary, Edmonton, New Westminster, Point Grey, Prince Rupert and South Vancouver exceeded the value for both March, 1925, and April, 1924.

Accumulative Record for First Four Months.—The 60 cities making returns authorized building to the value of \$34,715,156 during the first four months of 1925; this was 11.0 per cent higher than the total of \$31,269,425 for the

Note.—York Township is practically a suburb of Toronto, while the four Border Cities—Ford, Riverside, Sandwich and Walkerville—bear very much the same relation to Windsor.

same months of last year, but it was 10.8 per cent below the 1923 aggregate of \$38,935,085. As compared with totals of \$34,450,071 for 1922, \$26,886,566 for 1921 and \$34,498,201 for 1920, the increase during January-April, 1925, was 0.8 per cent, 29.1 per cent, and 0.6 per cent, respectively. The weighted index number of wholesale prices of building materials compiled by the Dominion Bureau of Statistics

averaged 154.0 during the first four months of 1925, as compared with 166.5 in the same period of 1924, 165.3 in 1923, 160.7 in 1922, 204.6 in 1921 and 213.4 in 1920.

The accompanying table gives the value of the building permits issued in 60 cities during April and March, 1925, and April, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

Work of British Oversea Settlement Committee in 1924

The British "Oversea Settlement Committee" in their report for 1924 state their opinion that family migration is the ideal form of settlement. This plan however presents the greatest difficulties both in the mother country and in the country of settlement. Two new schemes were arranged during the year with the Government of Canada. Under one of these the British Government agreed to contribute towards the erection of wooden shacks in Canada, for the temporary accommodation of British families while they are qualifying for settlement upon farms of their own. Under the other scheme the British and Canadian governments agreed to advance funds sufficient for the settlement of 3,000 British families upon farms of their own in Canada. The Dominion Government will provide farms in settled and established districts, within reasonable distance of a railway. Houses and buildings will be available on all the farms, and a sufficient part of the land will be available for immediate cultivation; and loans may be granted, at the discretion of the Dominion Government, for the purchase of live stock and equipment. The cost of the farms and the amount of any loans will be repayable by the settler over a period of 25 years, with interest at 5 per cent per annum. The annual repayments will not exceed 360 dollars, or about £6 a month. An account of the progress of family settlement in Canada was given in the last issue of the LABOUR GAZETTE.

The number of migrants who were assisted to proceed overseas during the year amounted to 15,120 men, 11,581 women, and 14,350 children. The corresponding figures for 1923 were: 16,957 men, 9,713 women, and 9,286 children. The total number of assisted passages for Canada granted under the Empire Settlement Act from 1922 to the end of April, 1925, is given as 18,090, this figure including the applicants and their dependants.

The Committee have always laid great stress on the desirability of increasing the proportion of women and girls proceeding overseas; and it is noted that for every 100 men assisted

to migrate 57.28 women and 54.76 children received assistance in the year 1923, and 76.59 women and 94.90 children in the year 1924. It will be seen from the figures given above that, whereas the number of men assisted in 1924 showed a decrease of 1,837 as compared with the number assisted in 1923, the numbers of women and of children assisted showed increases of 1,868 and 5,064, respectively.

The Committee deny the statement often repeated that the object of Empire settlement is the relief of unemployment in Great Britain. "The departure of settlers from this country," they say, "undoubtedly has a certain limited effect in reducing unemployment . . . but this result is incidental to, and not the object of, Empire-directed settlement. Its true object is the distribution of the white population to the best advantage of the Empire as a whole."

According to information furnished by state inspectors to the United States Bureau of Mines, production of coal in the United States in March, 1925, amounting to 44,684,000 tons, was accompanied by fatal accidents to 181 mine employees. The number of fatalities per million tons of coal produced was 4.05, as compared with 3.99 in the previous month and 7.19 for March last year. A comparison of the causes of accidents during the first quarters of 1924 and 1925 show changes in the death rates per million tons during the present year as follows: A reduction from 1,804 to 1,738 in falls of roof or coal, and from 1,731 to 0,753 in gas and dust explosions; an increase in the rate for underground haulage from 0.559 to 0.673 deaths per million tons, and from 0.170 to 0.213 for explosives, and from 0.073 to 0.139 for electricity.

A bill has been introduced in Denmark extending workers' accident insurance to "accidents to the insured person on his way to or from the place of work, provided that the journey is caused by and directly connected with such employment."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Fishing

PRINCE RUPERT, BRITISH COLUMBIA.—FISHING VESSEL OWNERS' ASSOCIATION OF PRINCE RUPERT, AND OWNERS AND CAPTAINS OPERATING HALIBUT FISHING BOATS FROM CANADIAN PORTS ON THE PACIFIC COAST, AND THE DEEP SEA FISHERMEN'S UNION OF THE PACIFIC.

Canadian share-boat agreement for the year 1925, and thereafter unless cancelled by either party on 30 days' notice.

The owners agree that all members of the crew except the captain and any one that owns one-fourth or over in his own vessel shall be members of the Union. If cooks or engineers are members of any other maritime union and in good standing, this Union shall claim no jurisdiction over them. Any member of the Association owning one-fourth or over in any Association vessel may act in any capacity in any Association vessel without interference.

The share of the vessel shall be one-fifth of the gross stock except when fishing gear is lost on the fishing grounds or stolen from the vessel in port or when pilot or Customs dues are incurred, in which case such must first be deducted.

The fishermen agree to pay their share of grub, fuel oils, cylinder oils, cup greases, waste, ice, salt and bait and to keep gear in order and replace it when lost or condemned.

All Canadian halibut fishing owners shall pay the Marine Sick Benefit Tax when taking their first clearance at the Customs Office. Medicine chest is to be furnished by vessel owners and kept up by the crew. A delegate is to determine what is needed each trip.

Should owners desire to change from the use of light to heavy gear or to space hooks closer they must pay difference in cost, and *vice versa*.

When vessels go out on charter other than for halibut fishing, the fishermen shall receive their share of all oil left on board, and shall have what is left when vessel returns. Crew doing repair work must be paid at Union rate if work is done by the crew. If member of the union does this work free of charge a fine of \$25 shall be paid before other members may sail with him.

"One fisherman approved by the captain shall attend the weighing of the fish. He must, in the captain's absence, assume all responsibility. Settlement to be made in the port where the fish is sold and to be made between the Captain or his agent and the fishermen. After the bills are paid, back bills to be paid as follows: When the share is \$25 or less nothing shall be taken out; when the share is over \$25 one-half of the amount from \$25 to the full share shall be taken out. If the captain desires to fit out on a cash basis he shall be empowered to use the proceeds of the voyage for this purpose. When money from the stock is used for cash payments the crew shall receive their share of whatever discount may be allowed for such cash payments."

When a tow is needed, tow bill shall be taken out of the gross stock.

A delegate shall be elected in each boat to see that crew are members of the Deep Sea Fishermen's Union in good standing. He shall check up bills and goods and be present at settlement. The cook shall see that stores are received as ordered.

The fishermen shall discharge fish from tackle to scale, head fish if required, wash fish holds and decks, and keep living quarters sanitary. Fishermen laying off shall hire substitutes and notify captain to that effect.

Fishermen are to pay for watchman when vessel is in commission, unless delayed, when vessel must pay.

Notice of discharge or leaving must be given when settlement is made.

Deck hands or extra men shall be paid by vessel.

"All fish except halibut must be sold as first class or dumped or destroyed unless otherwise ordered by the authorities. Halibut when not sold as first or second class must be dumped or destroyed. Failure to comply with the above shall be punishable with a fine of twenty-five dollars (\$25) for the first offence, and fifty (\$50) dollars for all other violations. Fine to be collected by the organization of which the offender is a member. No fish shall be contracted for but must be sold on the open market."

All disputes that cannot be settled on board must be referred to the Association and the Union for adjustment.

Construction: Building and Structures

HAMILTON, ONTARIO.—EMPLOYERS AND THE HAMILTON DISTRICT COUNCIL OF CARPENTERS.

Verbal agreement in effect from May 1, 1923, and renewed on May 1, 1924, has been further extended to expire on April 30, 1926.

Wag's per hour, 80 cents; eight hours per day for five days and four hours on Saturdays. Overtime, time and one-half; Sundays and holidays, double time. No work on Labour Day and carpenters' picnic day. Transportation in excess of 10 cents per day to be paid for work beyond city limits, and travelling time one way from city limits to the job. When employees are transferred from one job to another in working hours charges will be paid by employers.

HAMILTON, ONTARIO.—MASTER PAINTERS AND BROTHERHOOD OF PAINTERS, PAPERHANGERS AND DECORATORS OF AMERICA, LOCAL NO. 205.

Agreement same as in previous year (LABOUR GAZETTE, July, 1924) renewed to be in effect from May 1, 1925, until April 30, 1926.

Minimum wage per hour, 70 cents.

Hours per days, eight, with four on Saturday. After noon on Saturday and after 5 p.m. other days, time and one-half, Sunday, double time. Straight night work, nine hours' pay for eight hours' work; time and one-half to be paid for all time after the first eight hours.

Travelling time and transportation both ways to be paid men working twelve miles or more from the city hall. Inside that radius, travelling time one way and transportation both ways. Men staying on the job shall receive board and transportation.

No work on Labour Day; other holidays, double time.

No sub-contracting or work by men on their own behalf if fully employed by their employer. Overtime is to be eliminated as far as possible.

Manufacturing: Printing and Publishing

LONDON, ONTARIO.—LONDON "FREE PRESS" AND "ADVERTISER" AND THE INTERNATIONAL UNION OF STEREOTYPERS AND ELECTROTYPERS, LOCAL No. 115.

Verbal agreement to be in effect from December 1, 1924, until November 30, 1925, and from year to year unless thirty days' notice is given.

The Union agrees to furnish competent help, the employer giving preference to union members. If the Union cannot furnish help the employer in the meantime may secure the same.

Hours per day, eight, and four on Saturday. Hours per night, seven. A period of 30 minutes to one hour (without pay) shall be allowed day or night for lunch. Saturday afternoon, until 6 p.m., time and one-half; thereafter and Sunday and holidays, double time. A man called back will be allowed one dollar besides time and one-half, time worked to be at least two hours. All overtime, time and one-half.

Minimum wage per week: Journeyman Stereotyper, days or nights, \$37; foreman, \$42; assistant foreman, \$39; apprentices, from \$14 per week at beginning to \$24 per week in fifth year.

One apprentice to every two journeymen regularly employed.

When men are over worked extra men shall be put on. The agreement shall be null and void in case of trouble with any allied craft.

Manufacturing: Pulp, Paper and Paper Goods

THOROLD, ONTARIO.—THE ONTARIO PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOODS OF PAPER MAKERS, OF PULP, SULPHITE AND PAPER MILL WORKERS, OF ELECTRICAL WORKERS, OF STATIONARY FIREMEN, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, THE UNITED BROTHERHOOD OF CARPENTERS AND THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS.

Agreement to be in effect from May 1, 1925, until May 1, 1926. This agreement is an extension of the one which became effective May 1, 1923, and was summarized in the LABOUR GAZETTE for September, 1923.

Manufacturing: Clothing

TORONTO, ONTARIO.—THE TORONTO CLOAK MANUFACTURERS' PROTECTIVE ASSOCIATION AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION AND THE TORONTO JOINT

BOARD OF CLOAK, SUIT AND DRESSMAKERS' UNION, COMPOSED AS FOLLOWS: CLOAK OPERATORS' UNION, LOCAL No. 14; CUTTERS' UNION, LOCAL No. 83; PRESSERS' UNION, LOCAL No. 92.

Only good standing members of the local unions are to be employed by members of the Association at cutting, operating, pressing and finishing. To be engaged, a member must present union working card directing him to the place of business of the member. Each member of the Association shall maintain a union shop, i.e., one employing not less than eight operators with sufficient workers in other branches, and complying with union conditions.

No work shall be sent out without consent of the Union. The employees in each shop shall elect a shop chairman to represent employees in dealings with the firm. A union official shall be allowed to investigate shop conditions.

Hours of labour: forty-four per week; on first five days, from 8 a.m. to 5 p.m.; with one hour for lunch; Saturday, from 8 a.m. until noon; no work on Sunday. If desired there may be a five-day week, from 8 a.m. till 6 p.m. excepting Friday, hours then being 8 a.m. till 5 p.m.

No overtime work is to be done in manufacture of cloaks and suits between November 15 and December 31, nor between May 31 and July 15 except on samples and duplicates. Overtime in season not to exceed eight hours in any week nor two hours in any day, and to be restricted to first five days of the week.

Wages: minimum wage for cutters, \$35 per week; in factories where workers are paid by the week, operators, \$44; pressers, \$44; piece work, as per scale.

Each shop employing piece workers shall have a price committee elected by the employees at a regular shop meeting, to fix prices with the Management.

Wages of a worker deficient by reason of age or physical condition shall be agreed on between employer and worker approved by the Union.

Each employer shall employ at least eight operators and as many more as he employs at time of signing agreement, and additional help as necessary.

Workers engaged after the signing of agreement shall, after two weeks, be considered employees of the firm and be entitled to all rights, privileges, and benefits and subject to the obligations.

Suit skirts shall be made in the inside factory of the Association members. No member of the Association shall enter into an individual agreement with any employee. No contracting, sub-contracting or sub-manufacturing shall be permitted within the shop. No work shall be given to employees to take home. The employer shall furnish electric sewing machines and all materials and implements. No member of the Association shall give work to a contractor or sub-manufacturer, nor purchase any ready made goods from a manufacturer, nor accept any work from a jobber against whom the union is conducting a strike; nor send out work without the written consent of the Union and the Association. Each member of the Association shall furnish to the Union the names and addresses of the manufacturers or jobbers from whom he receives work, cut or uncut; and shall not do work for retail or mail order houses from the materials of same.

Union members are not to do any work for nor sell goods to firms against whom a strike has been declared; members of the Association shall not send goods to such firms during a strike. The union is to supply printed lists of manufacturers or jobbers against whom strikes are pending, when there is not enough work for full time, the work in the shop shall be divided as equally as possible among all the workers competent to do it.

A Joint Board of Sanitary Control* shall be established in the Cloak Industry of Toronto, made up of an equal number of representatives of the Association, the Union and the Public, to work out a code of sanitation for the industry of the city. The union sanitary label is to be used.

No member of the Association shall discharge a worker except for misconduct before notice in writing is served on the Union for reason of intended discharge. The union shall investigate the notice of the intended discharge within 48 hours. A person discharged for misconduct may file complaint to the Union, such complaints being disposed of as provided for in the agreement.

The Association, before accepting a new member, shall inform the union in writing of the application. If a strike or dispute is pending the union shall give the Association full particulars in writing, and the Association may adjust the dispute under the agreement. If no complaint is made by the Union within one week, the Union shall be deemed to accept the applicant.

There shall be no lock-outs or strikes in shops under the agreement, nor individual lock-out, stoppage or shop strike, pending determination of any complaint or grievance. In event of such stoppage or strike notice shall be given by the Association to the Union. The union agrees to return the striking workers to their work within twenty-four hours, and until that time is up they shall not be deemed to have abandoned their employment. The consideration of stoppage cases shall have precedence over all other complaints and grievances.

Complaints or grievances involving interruption or application of any clause of the agreement or relations between employer and employee shall be submitted in writing by parties claiming grievance to other party, and managers of Association and Union or their deputies shall jointly investigate matter and attempt an adjustment. Decisions reached shall be

*This Board is fully described in an article on page — of this issue.

binding. In failure to agree question shall be referred to a Trial Board of one member from each organization, and an Impartial Chairman selected by unanimous consent of both parties. Majority decisions of the board shall be binding. No decision shall be used as a precedent for any subsequent case. The impartial chairman shall order any investigation of facts involved in case.

When an employee absents himself from the shop, Union shall be notified and in case of failure to put worker back to work within three days, worker will have forfeited his position. This shall not apply in case of sickness of worker, or sickness of members of his family making his absence necessary. It shall not apply to Joint Board member and executive member called away on Union duties, nor to Union members elected as delegates to Union conventions.

The Union is to enter into no agreement whereby any person engaged in the industry in Toronto shall receive benefit not accorded members of the Association.

Transportation and Public Utilities: Water Transportation

SHIPPING FEDERATION OF BRITISH COLUMBIA AND THE VANCOUVER AND DISTRICT WATERFRONT WORKERS' ASSOCIATION.

The period of this agreement is from December 1, 1924, to December 1, 1929, instead of from December 1, 1925, to December 1, 1930, as stated in this article in the LABOUR GAZETTE for April.

Transportation: Electric Railways

WINNIPEG, MANITOBA.—THE WINNIPEG ELECTRIC COMPANY AND ITS EMPLOYEES (MOTORMEN AND CONDUCTORS).

Agreement as in effect from May 1, 1922, and renewed each year since then, has been renewed again, effective on May 1, 1925, until May 1, 1926.

NEW WAGE AGREEMENTS IN COAL MINES IN ALBERTA AND BRITISH COLUMBIA

IN the May issue of the LABOUR GAZETTE (pages 510-514) reference was made to the withdrawal of certain coal mine operators in South Eastern British Columbia and Southern Alberta from the Western Canada Coal Operators Association and of certain miners, their employees, from the United Mine Workers of America, District 18, and to the separate agreements between these companies and their employees providing for wage scales lower than those provided for in the agreement between the Western Coal Operators' Association and District 18 of the miners' union. The new scales were given in detail, that for the British Columbia section of the Crowsnets Pass Coal Field being approximately equal to the wage scale in Vancouver Island and in the interior of British Columbia and about 55 per cent above the pre-war scale, and that for the Alberta section being 20 cents-40 cents per day above the British Columbia scale.

It was also stated that early in May it had been reported that certain steam coal mines in Alberta, outside of the Crow's Nest Pass Field had come under similar arrangements. At Coalhurst, Alberta, the mine was closed and the miners were notified to take their tools out of the mine. The union declared this to be a lockout. During May the movement appears to have extended and some of the mines other than those producing steam coal, namely "domestic" coal and lignite came under similar arrangements, Coalhurst and several others being included early in June.

In British Columbia on Vancouver Island the principal operators had entered into agreements with committees of their employees setting forth working conditions and wage rates since the prolonged dispute in 1912-1914.

Prior to the autumn of 1924 in certain cases these agreements had provided for a cost of living bonus to be adjusted every three months according to the changes in the cost of living

as ascertained by a Commission under the Department of Labour appointed for that purpose in January 1919. When these agreements were renewed in October, 1924, this clause was altered to provide for a fixed bonus of 91 cents per day with the following qualification: " . . . it being mutually understood by the company and its employees that any increase, or decrease in the bonus herein mentioned shall be governed by competitive conditions." In the case of certain mines this provision had been made in 1922.

In May, 1925, the principal operators in Vancouver Island proposed to their employees to reduce the wage rates by 60 cents per day.

The miners at Cumberland, B.C., refused to

agree to this decrease but after further negotiations it was agreed that all those whose base rate was \$4.20 or more should be reduced 60 cents per day and those whose base rate was less than \$4.20 should be reduced by fourteen per cent, one-third of the reduction to be effective for the pay period commencing May 24, 1925, and one-third each month thereafter in June and July. This reduced the cost of living bonus from 91 cents per day to about 30 cents per day.

At Nanaimo, B.C., the miners in the principal mines refused to agree to the decrease and ceased work early in June. A week later the miners agreed to a settlement similar to that at Cumberland.

FAIR WAGE CONTRACTS, MAY, 1925

DURING May the Department of Labour received for insertion in the *LABOUR GAZETTE* the following information relative to two fair wage contracts awarded by the Department of Public Works of Canada. Both these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such pay-

ment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

Construction of doors for the International Labour Office, Geneva, Switzerland. Name of contractor, The Buyer's Door and Manufacturing Company, Limited, Toronto, Ontario. Date of contract, April 23, 1925. Amount of contract, \$3,078.

Construction of two steel hopper scows of 300 cubic yard capacity each. Name of contractor, Sydney Foundry and Machine Works, Limited, Sydney, Nova Scotia. Date of contract, May 5, 1925. Amount of contract, \$49,940.

POST OFFICE DEPARTMENT

The following is a statement of payments made in May, 1925, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system; the securing of payment to working men and women of fair wages, and the performance of work under proper sanitary conditions:—

Stamping pads, ink, etc.....	485 37
Mail bag fittings.....	6,179 25
Letter box repairs.....	72 35
Scales.....	109 30

FAIR WAGES ON PROVINCIAL PUBLIC WORKS IN MANITOBA

IN compliance with the provisions of the Fair Wage Act of Manitoba of 1916 (chapter 121, with amendments) the Bureau of Labour, which is in the Department of Public Works, has issued new fair wage schedules of rates of wages and maximum number of working hours in connection with the execution of public works, the schedules to be in effect from May 1, 1925, to April 30, 1926. The first schedule relates to the city of Winnipeg and a radius of thirty miles around it, and the second to the rest of the province.

The Fair Wage Board is composed of two representatives of the employers and two for the workers with an official of the Depart-

ment of Public Works. The schedules are drawn up after public hearings at which evidence is heard from parties interested, the rates being based on union or current rates in the district affected.

The changes in the rates in the following tables, as compared with the tables of last year are as follows:—Bricklayers' rate per hour changed from \$1.10 to \$1.25; stonemasons' rate from \$1.10 to \$1.25; marble setters' rate from \$1.05 to \$1.20, and mosaic and tile setters' rate from \$1 to \$1.15. The rate for teamsters in the province outside of Winnipeg is not stated.

Last year's schedule was printed in the LABOUR GAZETTE for June, 1924.

FAIR WAGE SCHEDULE FOR WINNIPEG

	Rate per Hour	Hours per Week
	\$ cts.	
1. <i>Labourers:—</i>

A workman employed by a logging company sustained internal injuries while lifting logs, and the company paid him \$788 for medical aid and hospital expenses and in cash advances. He claimed \$3,000 in compensation under the Workmen's Compensation, stating his degree of permanent disability as 25 per cent. The company contended that any amount due as compensation should be reduced by the sum already paid for hospital and medical treatment. The Superior Court at Montreal, in giving a decision in the case found that the claimant would suffer for the rest of his life from a disability of 10 per cent in his earning power. The amount paid already by the company for treatment had been paid on their own initiative and in their own interest, as it reduced proportionately the much higher indemnity which would have been incurred had they not furnished medical and hospital treatment. The Act did not warrant such a claim by the company. The workman was awarded \$792 and costs.

A workman employed by the Cunard Steamship Company Limited sustained injury to his foot when a plank fell on it, suffering a disability of about 5 per cent of his earning power. He subsequently agreed with the company to accept \$100 in compensation, being in ignorance of the fact that a larger amount could be claimed under the Workmen's Compensation Act. Later he made claim under the act and the case was tried in the Superior Court at Montreal. The court stated that there was no doubt that the plaintiff was entitled to more than \$100 or that the company's agents had done every-

thing to persuade him to accept the lowest sum possible. "The spirit of the Act is that the court should protect the employee," the court stated. "Here we are faced with the application of a paternal law so that not even the slightest advantage should be taken of such a situation. For this reason the Act declares that 'every agreement contrary to the spirit of this subsection shall be absolutely null.'"

The United States Railroad Labour Board, in a case concerning the Kansas City Southern Railway Company, the Texarkana and Fort Smith Railway Company, and the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees decided recently "that the practice of requiring women employees to relinquish their positions solely because they marry is neither just nor reasonable; they should be permitted to retain their positions so long as they satisfactorily fulfil the requirements thereof." The employees had asked for revision of rule 72 of the clerks' agreement which read as follows:—

The pay of women employees for the same class of work shall be the same as that of men and their working conditions will be healthful and fitted to their needs.

The employees proposed that this rule should be amended so as to provide that women should not be taken out of services when they marry. The Board decided to add the following clause to rule 72 of the clerks' agreement with the carriers concerned in the case:—

Women employees shall not be taken out of service by reason of their marriage so long as this does not prevent them from satisfactorily fulfilling the requirements of the position occupied.

PRICES, RETAIL AND WHOLESALE, IN CANADA, MAY, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices in May was not very pronounced, the family budget in terms of retail prices being again slightly lower while the index number calculated by the Dominion Bureau of Statistics advanced somewhat.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.48 at the beginning of May as compared with \$10.56 for April; \$9.89 for May, 1924; \$10.36 for May, 1923; \$10.22 for May, 1922; \$12.25 for May, 1921; \$16.92 for June, 1920 (the peak); \$12.66 for May, 1918; and \$7.43 for May, 1914. Eggs were again substantially lower while less important declines occurred in the prices of potatoes, milk, flour, rolled oats and sugar. Increases occurred in the prices of beef, fresh and salt pork, mutton, bacon and lard. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.73 at the beginning of May as compared with \$20.82 for April; \$20.24 for May, 1924; \$20.90 for May, 1923; \$20.57 for May, 1922; \$22.84 for May, 1921; \$26.92 for July, 1920 (the peak); \$20.09 for May, 1918; and \$14.21 for May, 1914. Fuel was slightly lower. Rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, advanced to 159.1 for May as compared with 156.5 for April; 150.6 for May, 1924; 155.2 for May, 1923; 153.9 for May, 1922; 170.5 for May, 1921; 256.7 for May, 1920 (the peak); and 201.4 for May, 1919.

In the grouping according to chief component material three of the eight main groups were higher, three were lower and two were practically unchanged. The higher level for the index number was due mainly to the movement in the Vegetables and their Products group which advanced substantially because of higher prices for grains, flour and other milled products, fruits and rubber. The Non-Ferrous Metals group and the Non-Metallic Minerals group both were somewhat higher, the former mainly because of higher prices for copper, silver and tin and the latter because of increases in the prices of lime and anthracite coal. The groups which declined were: Animals and their Products because of

seasonal declines in the prices of milk, cheese and eggs; Fibres, Textiles and Textile Products because of lower prices for cotton, wool, flax fibre and jute; Iron and its Products because of declines in pig iron and steel sheets. The Wood and Wood Products group and the Chemicals and Allied products group were steady.

In the grouping according to purpose Consumers' Goods was unchanged, declines in the prices of coffee, milk, cheese, eggs, sugar and potatoes being offset by advances in the prices of flour and fruits. Producers' Goods advanced substantially due to the higher prices of some manufacturers' materials, that is materials for the milling and other industries, for the fur industry, also for miscellaneous producers' materials.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods were higher. In the former group declines in raw sugar, coffee, potatoes, live stock, milk, eggs, cotton, wool and pig iron were more than offset by increases in grains, fruits, rubber, coal and some non-ferrous metals. In the latter group increases in flour, shorts, copper products, turpentine, and rope more than offset the decreases in sugar, cheese, steel sheets, lead and zinc products. Domestic farm products were considerably higher while articles of marine origin were slightly higher. Articles of forest origin and of mineral origin showed little change.

The Canadian Bank of Commerce index of exports fell from 154.74 for April to 153.27 for May. The index for imports was down from 163.64 to 163.25. The combined index of exports and imports fell from 159.19 to 158.26. The decline was due largely to lower prices for animal products which offset the advance in cereals.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods based upon price levels in 1913 as 100 declined to 148 for April as compared with 153 for March; 158 for February; 156 for January; and 143 for April, 1924. Both domestic and imported goods declined as did also export goods. Raw materials were lower while producers' goods and consumers' goods were unchanged.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913, and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for September, 1924.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of May of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods;

laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices continued upward in May, sirloin steak was higher in most localities, averaging 29.3c. per pound in May as compared with 28.5c. in April. Round steak was up from 23c. per pound in April to 23.8c. in May, shoulder roast from 15.3c. per pound in April to 15.8c. in May. Veal declined slightly, averaging 17.9c. per pound. Mutton rose from an average of 29c. per pound to 29.6c. Both fresh and salt pork showed a general advance, the former averaging 28.4c. per pound in May as compared with 27.4c. in April and the latter

* LABOUR GAZETTE, December, 1923, page 1442.

averaging 25.7c. per pound in May as compared with 24.9c. in April. Bacon also advanced somewhat, averaging 38.6c. per pound. In fresh fish cod steak averaged slightly lower while whitefish advanced. Salt cod was little changed in the average but finnan haddie declined somewhat. Lard advanced slightly, averaging 24.5c. per pound.

Prices of eggs were lower in most localities, fresh averaging 34c. per dozen in May, 37.5c. in April and 52.5c. in March and cooking averaging 30.3c. per dozen in May, 33.9c. in April and 45.7c. in March. Lower prices were reported for milk from Quebec, Three Rivers, St. Hyacinthe, Montreal, Oshawa, Toronto, Hamilton, Sudbury, Winnipeg, Brandon, Calgary, and Lethbridge. Butter showed little change in the average, dairy being 36.8c. per pound in May and 36.4c. in April and creamery being 40.9c. per pound in May and 40.7c. in April. Cheese was up from an average of 31.1c. per pound to 31.5c.

A decline in the price of bread was reported from Orillia, Guelph, New Westminster and Vancouver while higher prices were reported from Sault Ste. Marie, Calgary and Fernie. Flour was slightly lower, averaging 5.8c. per pound. Rolled oats showed little change. Tapioca declined from 14.2c. per pound in April to 13.9c. in May. Canned corn was slightly higher while canned tomatoes and peas were steady. Potatoes were again slightly lower in most localities, averaging \$1.37 per ninety pounds in May as compared with \$1.47 in April. Evaporated apples showed little change. Prunes averaged slightly lower at 15.4c. per pound. Marmalade was slightly lower at an average of 78.2c. per four pound tin. Sugar showed a slight decline, granulated averaging 8.7c. per pound in May and 8.9c. in April and yellow averaging 8.3c. per pound in May and 8.5c. in April. Coffee and tea showed little change. Cream of tartar declined slightly to 61.6c. per pound.

Anthracite coal was down from an average of \$16.70 per ton in April to \$16.45 in May. Lower prices were reported from Halifax, Sorel, St. Hyacinthe, Oshawa, Niagara Falls, St. Catharines, Stratford, Windsor, Sarnia, North Bay, Timmins and Sault Ste. Marie. Bituminous coal showed little change, averaging \$10.25 per ton. Wood prices were practically unchanged.

A slight increase in rent was reported from Hull.

Wholesale Prices

The following is a summary of a statement on prices changes during the month issued by the Dominion Bureau of Statistics.

The downward movement in grains which had continued for the last two months was reversed and prices advanced during May to considerably higher levels. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaged \$1.82½ per bushel as compared with \$1.56 in April. The low price for the month was \$1.68½ per bushel reached at the beginning and the high \$1.98 per bushel toward the end. Unfavourable crop conditions in the United States for both winter and spring wheat together with strength in foreign markets were said to be the causes of the higher prices. Other grains also advanced, Western oats being up from 50½c. per bushel in April to 60½c. in May, barley from 78½c. per bushel in April to 88½c., in May, flaxseed from \$2.35 per bushel in April to \$2.44 in May and American corn at Toronto from \$1.21 per bushel in April to \$1.30 in May. Milled products advanced in sympathy with the increased prices of grains. Flour at Toronto rose from \$8.95 per barrel to \$9.80 and shorts from \$28.40 per ton to \$29.90. Sugar prices continued downward and reached the lowest point in three and one-half years. The cause was said to be exceptionally large crops in Cuba. Raw sugar was \$3.89 per hundred in May as compared with \$4.03 in April. Coffee was again slightly lower. Potatoes were down from 62½c. per bag in April to 54½c. in May. Oranges were up from \$6.25-\$6.50 per box to \$6.50-\$7.50. Apples rose from \$10 per barrel to \$12. Raw rubber advanced substantially, a grade of Ceylon being up 14c. per pound to 57c. Turpentine was up from \$1.50 per gallon to \$1.70. Prices of cattle showed little change from last month. Sheep were slightly lower at \$8.90 per hundred. Hogs were down from \$13.44 per hundred in April to \$12.58 in May. Mess pork fell from \$42 per barrel to \$40. Canned salmon rose from \$3.95 per dozen tins to \$4-\$4.15. Lard declined 1c. per pound to 18½c. Milk prices were lower in both Toronto and Montreal. At the former city the price was down from \$1.95 per eight gallon can to \$1.70 and in the latter from 25c. per gallon to 21c. Creamery butter at Montreal advanced slightly, being 39c. per pound. Cheese at Toronto fell from 25c. per pound to 20c. Fresh eggs at Montreal were 34c.-35c. per dozen in May as compared with 35c.-36c. in April. Raw cotton at New York averaged 23½c. per pound in May as compared with 24½c. in April. Wool continued to decline, being 3c. to 4c. lower than last month. Jute was down from \$13.32 per hundred to \$13.09. Foundry pig iron at Montreal was down from \$29.20 per ton to \$28. Copper advanced

slightly, being \$15.50 per hundred as compared with \$15.40 in April. Tin was up from 53c. per pound to 56½c. Zinc was slightly lower at \$8.45 per hundred. Silver advanced from 67c. per ounce to 68½c. Anthracite coal was slightly higher at Toronto.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The general tendency of wholesale prices for the first four months of the year was downward in most countries, the levels in Poland, Spain and China being stationary during the period. The cost of living was stationary in the majority of cases, with sharp downward turns in Austria, Belgium and Great Britain.

Great Britain

WHOLESALE PRICES.—The *Times* index number, on the base 1913=100, was 2.9 per cent lower at the end of April than a month earlier, and stood at 162.7. This was the fourth successive decline, with a total fall of 9.2 per cent since the beginning of the year. Foods declined 1.2 per cent during April, and materials 3 per cent. Practically all groups were lower, the only heavy declines, however, being in textiles, cotton falling 5.2 per cent and other textiles 7.6 per cent.

The Board of Trade index number, on the base 1913=100, was 162.6 for April, which was lower by 2.2 per cent than the March figure. Foodstuffs were cheaper by 1.6 per cent, cereals having fallen by 6.6 per cent, while meat and fish rose by 0.4 per cent, and other foods by 1.3 per cent. Materials fell by 2.5 per cent during the month under review, each of the groups showing a decline, the chief decreases being 3.9 per cent in cotton and 3.8 per cent in other textiles.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77) declined 1.8 per cent from the March level, reaching 137.5. All groups except vegetable foods declined, foods falling 2.3 per cent for the month, and materials falling 1.6 per cent. For the first time since the war sterling prices represented gold prices also. In individual commodities a sharp seasonal rise in potatoes offset declines in other vegetables. All animal foods declined except pork and the highest grades of beef, which remained unchanged. In minerals, copper and tin recovered and lead declined. Wool, raw cotton and flax and hemp receded, most sundries declined and imported timber rose in value.

The *Economist* index number, on the base 1901-05=100, declined 2 per cent in May to 202.6, thus registering the third successive drop. The principal changes were a decline

of 2.5 per cent in tea, sugar, etc., and one of 7.4 per cent in textiles. Cereals and meat, minerals, and the miscellaneous group (rubber, timber, oils) all advanced slightly.

COST OF LIVING.—The official index number of the Ministry of Labour, on the base July, 1914=100, was one point lower at the beginning of June, being 172. Goods fell one point to 166, and fuel and light fell 5 points to 180. Rent, clothing, and sundries were at their previous levels of 147, 230 and 180 respectively.

Belgium

WHOLESALE PRICES.—The official index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 546 for March, 0.9 per cent below the February level. Slight increases were shown by petrol and products, clay products, and raw rubber. Paper products showed no change and other groups all showed slight declines.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices for the Kingdom, on the base April, 1914=100, fell to 506 in April, a decline of 1.0 per cent. The index number of cost of living of a family with moderate income, on the base 1921=100, declined 2.6 per cent to 131.50, owing to declines in the food group. The index number for a working-class family of the lowest category declined 2.9 per cent in April to 134.21. This also was owing to a decline in food prices.

France

WHOLESALE PRICES.—The official index number of *Statistique Générale*, on the base July, 1914=100, fell one point in April to 523. Foods and industrial materials each declined one point. Of foods, vegetable foods rose somewhat while the other groups declined. In materials, minerals and metals and textiles rose while the miscellaneous group declined.

COST OF LIVING.—The official index number of *Statistique Générale* of cost of living at Paris rose 2.4 per cent in the first quarter of 1925, as compared with the last quarter of 1924. Food rose 3.7 per cent; heat and light rose slightly, and other groups remained at their previous levels.

Germany

WHOLESALE PRICES.—The official index number of the Federal Statistical Office of gold prices 1913=100, declined 2.5 per cent in April to 131.0. Foods fell 3.5 per cent, and materials fell 0.9 per cent. Goods produced fell 2.7 per cent, and goods imported fell 2.0 per cent.

COST OF LIVING.—The official index number for gold prices, on the base 1913-14=100, was 136.7 for April, which was thus slightly above the March figure of 136.0. Foods declined slightly to 144.2, and all other groups rose slightly, being as follows: heat and light, 138.2; rent, 78.5; sundries (including travelling expenses), 178.0; clothing, 173.5.

Spain

WHOLESALE PRICES.—The official index number compiled by the Director-General of Statistics, on the base 1913=100, was 193 in March, as compared with 192 in February. Foods rose one point during the month and materials showed no change.

RETAIL PRICES.—The official index number of retail prices at Madrid, on the base prices in 1914=100, was 190 in March, as compared with 189 in February. Animal foods rose one point and vegetable foods rose 2 points. Fuel and miscellaneous articles showed no change.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, was 616.39 in April, 1.5 per cent lower than during the previous month. Foods declined 3.8 per cent, and materials declined 0.5 per cent. All groups declined except construction materials, miscellaneous vegetable products and miscellaneous industrial materials, the last of which advanced to its highest level since the record was begun.

COST OF LIVING.—The index number of the City of Milan, on the base July, 1920=100, rose 1.7 per cent in February to 131.48. Foods rose slightly and other groups in the budget remained at the level of the previous month.

Poland

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics, on the base January, 1914=100, was 121.6 for March, as against 121.2 for February. Vegetable products, textiles, construction materials and chemical products rose slightly, animal products and metals and coal declined, and colonial products and sugar showed no change.

COST OF LIVING.—The official cost of living index, on the base 1914=100, showed only slight variations during the last four months, and stood at 150.5 in April, as against 151.3 in March. During the month, foods and fuel and light each declined 2.6 per cent; rents rose 12.4 per cent to 54.1; clothing showed no change.

China

WHOLESALE PRICES.—The official index number of the Shanghai Bureau of Markets, on the

base February, 1913=100, was 159.3 for April, just one point below the March level. The average of the four miscellaneous groups declined 1.9 per cent. Cereals advanced 7.1 per cent and metals 6.1 per cent. Other foods and textiles each declined 1.2 per cent.

New Zealand

WHOLESALE PRICES.—The official index number of the Census and Statistics Office, on the base 1909-13=1,000, was 1,811 for March, or 0.4 per cent above the April level. The only noteworthy changes were declines in agricultural produce and in the group, wool, hides, tallow, butter and cheese, and a marked increase in the group flour, bran, pollard and oatmeal. The other groups showed very slight changes.

COST OF LIVING.—The official index number, on the base July, 1914=1,000, published every six months, was 1,605 in February, as against 1,602 in August, 1924. Food, fuel and light, clothing, and the miscellaneous group declined, while rent, advanced 3.5 per cent to 1,680.

United States

WHOLESALE PRICES.—Dun's index number (showing the cost *per capita* of a year's supply of commodities) showed for June 1 an advance of about one per cent, reaching \$195.165. Of the seven groups, two showed advances for the month, namely, breadstuffs and dairy and garden products, the former rising $7\frac{7}{8}$ per cent. Other food showed no change, while meat, clothing, metals and the miscellaneous groups showed declines.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) showed a sharp upward turn at the first of June after four successive monthly declines, and stood at \$13.6177 an advance of 2.2 per cent. This was accounted for by strength in breadstuffs, live stock, provisions, non-ferrous metals, oils and miscellaneous products—the last, owing to a rise in rubber. These movements more than offset declines in textiles (especially cotton), and some building materials.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life on the base 1913=100, showed a slight decrease for April, standing at 161.1, as against 161.6 in March. Foods and clothing declined slightly and the other elements of the budget showed no change.

REPORT OF THE BRITISH COMMISSION ON FOOD PRICES

THE Royal Commission appointed in Great Britain in November, 1924, to investigate prices and trading in foods, has presented its first report on the trade in bread, flour, wheat and meat. The report is in three volumes, the first containing the text of the report, the second the minutes of evidence and the third the appendices. It was signed by all the members of the Commission except two, who made separate minority reports, but notes or reservations were made by a number of the majority.

One of the important recommendations of the Commission from the Canadian point of view is that the Government may find it desirable to discuss with the Dominion Governments the possibility of encouraging, in the interest of the producer and consumer, the flow of food from the Dominion to the markets of Great Britain.

In addition to the chairman, Sir Auckland Geddes, former British ambassador at Washington, the commission consisted of the following fifteen members: Frank Collier, secretary of the food department of the Board of Trade; William Dudley, who was a member of the Consumers' Council during the war; William Grand, representing Northern Ireland; Dame Helen Charlotte Gwynne-Vaughan, professor of botany at the University of London; Walter Layton, editor of the Economist, and formerly director of the Economics and Financial section of the League of Nations; Sir Halford Mackinder, chairman of the Imperial Shipping Committee; Sir John MacLeod, formerly food commissioner for Scotland; Hugh Paul, late member of the Royal Commission on wheat supplies; Sir Harry Peat, eminent accountant and formerly secretary to the Ministry of Food; George Powell, clerk of the Metropolitan Asylums Board; Sir Henry Rew, formerly secretary to the Ministry of Food and member of the Royal Commission on wheat supplies; Thomas Ryland, president of the National Farmers' Union; W. H. Smith, one time Parliamentary Secretary to the Ministry of Agriculture and Fisheries; Mrs. Philip Snowden, wife of the late Chancellor of the Exchequer, and Isaac Stephenson, president of the National Chamber of Trade.

The report was described in the British *Ministry of Labour Gazette* for May:—

The Royal Commission on Food Prices was appointed on November 29, 1924, to "inquire into the conditions prevailing in the wholesale and retail trades in articles of food of general consumption so far as they affect prices, particularly having regard to the difference between the prices received by producers and the prices paid by consumers, and to report what action, if any, can usefully be taken."

The Commission have examined 90 witnesses and have also collected a large amount of information from other sources by correspondence and interviews; and their First Report has now been presented.

The Commission decided to deal first with certain general considerations of an economic and statistical character affecting the problem as a whole; secondly with the bread, flour and wheat trades; and thirdly with the meat trade. In their present Report they give a general explanation of the causes of the present level of food prices, and consider the statistical evidence bearing on the margin between wholesale and retail prices; they review the bread, flour, wheat and meat trades, and discuss the general position of State trading in food.

As a result of their investigations, the Commission state that they have been forced to the conclusion that at least some purchasers of bread and meat have to pay an unfairly high price for the loaves and joints which they actually receive. The Commission remark, however, that in saying this they do not bring any general accusation of dishonest trading or of profiteering against dealers in wheat, flour, bread or meat, but that they have discovered practices which are unfair and contrary to the public interest.

The most general conclusion of the Commission is that there should in future be an organ of the State, with statutory powers, permanently in being, to watch over the supply of wheat, flour, bread and meat. This organization the Commission refers to as a Food Council, and in their Report they sketch its proposed constitution, duties and powers. The establishment of this Food Council is the principal recommendation of the Commission and dominates most of their other recommendations. As to the functions of the Council the Commission say:—

"We do not contemplate a new Department of State with a considerable staff. We have in view the formation of a body which, by combining representation of economic, financial, administrative, and consuming interests, would gain the confidence of the public and the respect of the business world. . . . It will act as a mediator between producer, trader, and consumer, in reconciling for a common end interests which we do not regard as necessarily conflicting."

"The primary duty of the Food Council would be to study the situation in regard to bread and meat supplies, and to keep the public fully informed by periodical reports as to the working of these essential trades. The Food Council's reports should be not merely statistical compilations, but should provide a commentary on the trend of events, and so far as possible explain the causes which lead to important movements in prices. For this purpose the Council would need to collect information relating to production, import, consumption, and stocks, together with more precise information than is at present available with regard to wholesale and retail prices. . . ."

"It would be one of the Council's chief duties to consider, either on the basis of the statistics collected by it or as a result of particular investigations, whether the public were obtaining their supplies of the staple foodstuffs in the most economic manner, and at the lowest reasonable price. The Council would have power to investigate specific complaints. In its periodical reports it would draw attention to localities where prices were shown to be exceptionally irregular or unduly high, and, where cases of profiteering were discovered, it would use the power of publicity and, if necessary, give directions."

The Commission further recommend that, in addition to its special powers and duties, the Food Council

should investigate apparent overlapping in the bread trade, consider differentiation between charges for bread sold over the counter and bread delivered, and watch the fixing of prices by associations in the baking and milling trades, intervening if necessary.

Other recommendations of the Commission are that port authorities should consider port charges on wheat, with a view, if possible, to early reduction in rates; that any local authority which proposes to issue a list of fair retail prices should consult the Food Council; that retail butchers should be compulsorily registered; that cold storage proprietors should be required to furnish statistics of stocks of meat in cold store; that the Food Council should watch future developments in the Argentine meat trade, in view of its possible domination by adverse trading combinations; that the Government should discuss with Dominion Governments the encouragement of Empire sources of food supply; and that the Government should exercise their influence to ensure that it shall be the duty of the Economic Section of the League of Nations to make a continuous study of international food problems, and to prepare periodical reports for submission to the Council of the League.

Mr. Walter T. Layton while agreeing with his colleagues in attaching importance to the economic development of the Dominions, emigration, communications, marketing, etc., did not think the food situation was of special significance in this connection, nor did he agree with those who take an alarming view of future food supplies, and who for this reason would take special steps to expand imperial resources. He emphasized the paragraphs of the report with regard to general anti-trust legislation, as the

common law doctrine with regard to actions in restraint of trade had been so narrowed in recent years by court decisions as to render it of little protection to the public against discriminatory practices, the stinting of supplies, or combinations to raise or maintain prices unduly. He recommended legislation to define and put a ban upon such practices, and a tribunal with power to investigate and take evidence on oath in cases brought before it by a responsible body and to issue injunctions. He held that the device of the Food Council relying in the main upon the weapons of publicity and persuasion, was not a substitute for such legislation and would not be greatly effective without it.

Sir Henry Rew made various reservations with regard to the findings of the Commission particularly suggesting that trading in some other important articles, besides food should have been investigated, and also with regard to the Food Council and its functions.

Mr. Isaac Stephenson suggested that one member of the Food Council should be a retailer.

Mrs. Philip Snowdon disagreed with the conclusions not favourable to state trading.

Mr. T. H. Ryland in his Minority Report recommended against the Food Council and Mr. Walter R. Smith recommended in favour of state trading.

THE WORKERS' STANDARD OF LIFE IN COUNTRIES WITH DEPRECIATED CURRENCY

A Study by the International Labour Office of Conditions in Germany, Austria and Poland

THE International Labour Conference at its session in November, 1922, adopted a resolution proposed by the Workers' Group to undertake a documentary investigation into the present standard of living as compared with the pre-war standard, particularly in Germany, and into the measures adopted or contemplated to secure an adequate living wage.

The results of the inquiry by the International Labour Office are embodied in a report recently published by the International Labour Office, Geneva.

It was found that while conditions were changing, it was impossible to "appreciate rightly the facts recorded, or to detect the general tendencies indicated by them." It was therefore found impossible to prepare the report until monetary stabilization had been brought about, and the results of the period

of inflation thus brought to an end could be examined. The report deals primarily with Germany, but also with Austria and Poland. The material available was found to be inadequate for a complete and detailed study of all aspects of working class living conditions in these three countries. Changes in the aggregate income of the workers were examined, account being taken of wage rates, unemployment, and the cost of living. The scope of the inquiry was restricted to manual workers in industry, including mining and transport. Agricultural workers were excluded, but it was stated that this class suffered less from inflation.

The inquiry indicated that the chief factor in reducing the income of the working classes was the technical difficulty of adjusting wages rapidly to the rise in the cost of living. A considerable part of the report is devoted to

the methods adopted to do this. The report states that the fall in the national income in these three countries had some share in lowering the workers' standard of living, but that it was an obscure and controversial question and there was no material available to throw any real light on this aspect of the problem.

In Germany the increase in the paper currency issued became exceedingly rapid by the end of 1922, causing prices and wages to rise rapidly. In April 1922 wholesale prices of industrial raw materials were 69 times as high as in 1914, by October were 569 times as high, by October, 1923, were ten thousand million times as high, and by December of the same year were one and a half million million times as high. In November of that year when the currency had thus become valueless and practically useless, the economic life of the country being practically paralyzed, stabilization had been begun with the introduction of the rentenmark, a currency unit designed to have the value of a gold mark, issued by the "Rentenbank," an autonomous institution established for the issue and the control of this currency, secured by a general mortgage on private property including land. In January, 1924, wholesale prices in terms of this currency were about one and one-half times pre-war prices and continued on this level approximately thereafter, and were therefore above pre-war prices to about the same extent, or a little less, as in the United States, Great Britain and other countries on a gold basis or near it.

Retail prices lagged behind wholesale prices until October, 1923, when dealers attempted to anticipate further increases by selling their goods at prices high enough to cover the expected cost of replacement.

Wages of skilled and unskilled labour lagged behind the prices of materials and retail prices. When stabilization had been effected at the beginning of 1924 real wages of skilled labour were 86 per cent of pre-war wages and wages of unskilled labour 106 per cent.

During the period of rapidly rising prices industry and trade were stimulated at the expense of existing creditors, bondholders, etc., whose securities payable in marks depreciated rapidly and finally became valueless. Employment was found to be good throughout the period, but as wages were rising less than prices, the wage-earners real incomes were constantly decreasing, while on paper the profits of the employers were increasing. In 1923 the crisis was reached and was followed by conditions the reverse of those before, prices fell slightly while wages

rose slightly, but unemployment became very serious. The inquiry revealed however that a large proportion of the profits made during the period of inflation had been put back into the industries to improve and develop the means of production, tending to improve conditions later.

In Austria, conditions before and after the crisis were much the same as in Germany, but the crisis occurred earlier and the reorganization of the currency took place at the close of 1922 with the assistance of the League of Nations. The rise in prices was not so great as in Germany and as Austria was detached from its markets in the countries formerly attached to it, industrial conditions were bad, particularly from 1919 to 1923. Wages were adjusted to changes in prices, in many cases automatically and very frequently, so that the lag between the rise in wages and prices was not great, and from 1922 onwards wages began to rise faster than prices, so that for building trades, metal trades, tailors and bookbinders, wages in 1924 had risen more than prices, while textile workers, chemical workers and printers' wages had not risen as much as prices, and real wages were five to twenty-five per cent lower than before the war.

In Poland the currency system was reorganized at the beginning of 1924. As in Austria, some occupations had wages relatively higher than prices and some lower by 1924, but in the period 1921 to 1923 wages rose much less than prices, so that the standard of living fell considerably.

The report stated that during the recent crisis the three countries followed similar methods of adjusting wages. In Germany wages were chiefly adjusted by the ordinary method of negotiations between employers and workers. The period of validity of agreements had however to be curtailed progressively, and the wage clauses had to be made more or less independent of the other parts of the agreements. As the rise in cost of living grew more and more rapid in 1923 negotiations had to be renewed every two or three weeks, but although simpler procedure was desired, no system for the purely automatic adjustment of wages was ever actually adopted. In Austria, however, wages were automatically adjusted to prices, but this practice was discontinued owing to objections from employers of labour.

The problem of the adjustment of wages to the cost of living raised further problems. In the words of the report "allowance had to be made for differences in the cost of living between different localities and cost-of-living bonuses graduated accordingly. This

procedure is to be found in all three countries, but most of all in Germany, where it was particularly necessary, as many collective agreements cover very large areas. The decrease in wages bore most heavily on workers with families, and attempts were made to meet this difficulty by paying allowances graded according to the number of the worker's dependants. These allowances were never of any great amount in any of the three countries, and seem in no case to have compensated fully for the greater expenses of workers with families. The system was fairly general in Germany, where many collective agreements

provided for family allowances, but these are generally very small. Many Austrian collective agreements also include such provisions. In this country the most interesting measure in this connection is the establishment by law of a system of family allowances (or more precisely children's allowances) on a national basis. These allowances, however, were not regularly adjusted to the cost of living, and rapidly lost most of their value. In Poland the system was less frequently adopted, except in a few industries and for public officials, who, as in other countries, were among the first to receive family allowances."

RECENT LEGAL DECISIONS AFFECTING LABOUR*

Public School Teacher May Disobey Unreasonable Order by Trustees

A school teacher in Saskatchewan was engaged by a board of school trustees for the period from January 12 to June 30, 1924. On May 12 the board closed the school and held an investigation concerning one of the children, afterwards requesting the teacher to suspend the child from attending school. The teacher who had no complaint against the child, refused to do so and was suspended by the board. Later in the month the teacher and the trustees decided to have their differences settled out of court by a Justice of the Peace, who recommended that the teacher be re-engaged until June 15, and that he be paid one week's salary for the period of his suspension. Both parties accepted this recommendation. However, on June 13 the board closed the school and requested the teacher to return the keys and the register, and he was not allowed to teach again. The same teacher had been employed also in the capacity of night school teacher, for which service he was to be paid by the trustees the amount of the government grant, having also their permission to collect what he could from those attending the night classes, but the trustees paid him nothing in respect to the night school. The teacher brought action to recover in all \$260. The claim was dismissed by a lower court, but this decision was reversed on appeal. The Court of Appeal found that if a teacher knows of no reason why a pupil should be suspended or expelled, and has received no complaint against the pupil, he is justified in refusing to obey an order of the school board to suspend the pupil. The Court also found that when a school board wrongfully prevents a teacher from teaching, the period of his suspension should be counted in his favour in determining whether he has been teaching

continuously for the four months or more which is required to entitle him to the payment of salary as provided in the School Act of Saskatchewan. In regard to the payment claimed by the teacher for work in the night school, which had been refused by the trustees on the ground that the contract was not in writing and was not in a form prescribed by the minister, the Court found that these requirements do not apply to a contract with the teacher of a night school, and that such a teacher therefore could recover on his contract, although not in the prescribed form. (*Saskatchewan-Leclerc versus the Board of Trustees of Perigord School District*).

Monthly Salary Presumed to Imply Hiring by the Month

A fare-box inspector was employed by the Winnipeg Electric Railway, with the general duty of taking up fare-boxes in use on street cars and protecting the company from any dishonesty on the part of employees through the removal of fares from boxes, his salary for this work being at the monthly rate of \$150. He was dismissed in the middle of a month, receiving \$150, which sum included \$75 due as wages for the half month, and \$75 in lieu of any notice of dismissal. He brought action in the County Court against the company for wrongful dismissal, and was awarded \$150 in damages. The Court of Appeal subsequently reduced the amount of damages to \$75. The Appeal Court found that the point for decision was in respect to the character of the hiring of this employee. If the hiring was of an indefinite character it was terminable on reasonable notice, and an amount equal to six weeks' salary, as allowed by the trial judge (that is \$150 in addition to the \$75 already paid by the Com-

* Other recent legal decisions are given on page 624.

pany) was in no way unreasonable. In this case however the hiring was not of a general character, creating the presumption that it was for an indefinite period. The workman was employed at a monthly salary, and no circumstances had been shown to overcome the presumption that the hiring was by the month. In the case of a monthly hiring, while it might be reasonable in some cases that notice of dismissal should be less than a month, there was nothing to make a longer notice reasonable.

Sawmill Employee Cannot Attach for Wages in Quebec

A workman in the province of Quebec was employed in a sawmill in connection with the manufacture of laths and lumber, resulting in a claim against his employer for \$294 in wages. The mill owner becoming insolvent the workman took out a writ to attach laths and lumber, on the ground that, having been employed in the manufacture of the material in question, he was entitled to a lien under Article 1994c of the Civil Code. The owner opposed the claim on the ground that a workman employed in a sawmill has no privilege for his salary under this article, which reads as follows:—

1994c. Every person engaging himself to cut or manufacture timber, or to draw it out of the forest, or to float, raft or bring it down rivers and streams, has, for securing his wages or salary, a privilege, ranking with the claims of creditors who have a right of pledge or of retention, upon all the timber belonging to the person for whom he worked, and, if he worked for a contractor, sub-contractor or foreman, upon all the timber belonging to the person in whose service such contractor, sub-contractor or foreman were, and which was cut, drawn or floated, by such contractor, sub-contractor or foreman; but said privilege is extinguished as soon as the lumber shall have passed into the hands of a third person who has bought it, has received delivery thereof, and has paid the price therefor in full. Such privilege in no wise affects that which the banks may acquire in virtue of the Banking Act. However, in the case in which the creditor has worked for a contractor or sub-contractor, such privilege shall not exist unless the person having a right thereto has given a written notice to the person affected by the exercise thereof, and to the debtor or heir agents or employees, of the amount due to him at each term of payment, as soon as possible, and such notice may be given by one creditor for and in the name of all the others who are unpaid.

The Superior Court for Montmagny found for the plaintiff, and the owner then appealed, the appeal being heard by the Court of King's Bench. The judge's decision states "that the privilege provided in the foregoing section is granted to every person engaging himself to cut or manufacture timber, or to draw it out of the forest, or to float, raft or bring it down

the rivers or streams, and it appears to me from the wording of the article, and the sequence of operations referred to, that the privilege was designed for the protection of workmen employed in the woods in the earlier operations of getting out timber." In any event, the judgment proceeded, the plaintiff failed to give written notice of the debt as required by the Statute. The judgment of the lower court was reversed and the appeal sustained, the claim for lien being quashed.

—(*Quebec—Salls et al. versus Déchène and Caron*).

Municipal Night Watchman Protected by Compensation Act of Quebec

A night watchman was employed by the corporation of the city of Shawinigan Falls, Quebec, in October, 1922, in connection with the construction of a cement sidewalk. He left his post one night to inform the foreman that more oil was required for the lanterns for the following night, and in returning slipped on the curb and fell, fracturing his leg above the knee. The foot on the same leg had been amputated as the result of a previous accident. He claimed compensation under the Workmen's Compensation Act, on the basis of disability amounting to 80 per cent as the result of the two accidents. The corporation opposed the claim on the ground that it was not subject to the provisions of the Act, and that even if liability existed, the accident in this case did not arise out of, and was not sustained in the course of the claimant's employment. The Court of Appeal confirmed the decision of the Lower Court, finding that the construction of a cement sidewalk fell under the provisions of the Act as amended in 1920, this amendment being as follows:—

"Whenever a municipal corporation undertakes or executes public works itself, under such conditions as would render a contractor liable under the provisions of this Act, it shall become liable itself."

Moreover the word "work" in the sense in which it is used in the Act includes all activities in connection therewith. The claimant was in charge of the material in this case and should therefore benefit by the Act. He might have acted with bad judgment in making his journey to the foreman, but the journey was undertaken in the course of his employment. Damages to the amount of \$1,159, with expenses in the two courts, were allowed to the plaintiff.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 25]

JULY, 1925

[NUMBER 7

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE employment situation in Canada during May continued to show an improvement over the previous month, the increase in the numbers employed being greater than at the same period in 1924. While reports from the Employment Service of Canada indicated a slight decline in the volume of business transacted during May when compared with the previous month and also with the corresponding month last year, this was due to the earlier demand for farm hands in the prairie provinces, the bulk of which was met in April. Placements during April and May of this year were, however, higher than during the same months of 1924. At the beginning of June the percentage of unemployment among the members of trade unions throughout Canada was 7.0 as compared with 8.7 per cent at the beginning of May and with 7.3 per cent at the beginning of June, 1924. The number of local unions from which reports were tabulated was 1,483 with an aggregate membership of 151,284 persons. Reports from 5,943 firms showed that they were employing 778,951 persons on June 1, 1925, as compared with 749,194 in the preceding month, while the employment index number, which is based on the number of workers employed on January 1, 1920, as 100, stood at 945, as compared with 90.8 on May 1, 1925, and with 95.2 on June 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.44 at the beginning of June as compared with \$10.48 for May; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918, and \$7.49 for June, 1914. In the wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined slightly for June, being 158.8 as compared with 159.1 for May; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920, and 201.7 for June, 1919.

The time loss caused by industrial disputes was somewhat greater in June than in either

the previous month or in June, 1924. Nineteen disputes were in progress at some time during the month, involving 13,906 employees, and resulting in a time loss of 313,179 working days. Corresponding figures for May, 1925, were as follows: 15 disputes, involving 12,975 workpeople and resulting in a loss in working days of 299,369 working days, and for June, 1924, 26 disputes involving 12,296 employees, and a time loss of 214,790 working days.

Trades and Labour Congress Convention Call

The forty-first annual convention of the Trades and Labour Congress of Canada will be held at Ottawa in the first week of September. The convention call, signed by President Tom Moore and secretary-treasurer P. M. Draper makes the following appeal to the affiliated unions, trades councils, and provincial federations of labour:—

“As the convention is being held this year in the Capital City of the Dominion every effort possible should be put forth by our affiliated organizations to ensure a large and representative gathering of delegates. Labour is the most important factor in our national life and the work of building up and strengthening our movement and widening the sphere of its influence must be vigorously continued, and its voice constantly heard. The eight-hour day, old age pensions, unemployment, immigration and other matters of national and international importance still demand active consideration, and the necessity of meeting in annual convention to secure unity of action and purpose and to determine future policies cannot be over emphasized. Long continued trade depression has undoubtedly caused many organizations to be faced with innumerable difficulties. These, however, should not be made a reason for not being represented at the forthcoming convention, but the knowledge that they exist should rather be the incentive necessary to greater effort to make the forthcoming convention fully representative of the entire movement from coast to coast. Each year a number of resolutions fail to receive the attention of the convention because of

neglect to comply with the constitution (section 4, article IV) which demands that resolutions, and amendments to the constitution, shall be received at the office of the Congress not later than twenty days prior to the opening of the convention."

The Credential Committee meets at 2 p.m. on Sunday, August 30, one day prior to the opening of the convention, in the Russell Hotel, which will be the headquarters of the Congress.

President Green on joint ownership

The *American Federationist*, the official organ of the American Federation of Labour, contains many new features in its June issue. The editorial section

is written by the new president, William Green, and special articles are contributed by prominent union officials. Mr. Green defines the views held by labour on the subject of employee stock ownership. There has been in recent years a wider diffusion of ownership of industrial concerns, as corporate enterprises with their stocks and bonds offered a convenient form of investment for persons of small means. One result of this process has been the encouragement given to employees in many industries to invest their savings with the company which employs them. Mr. Green believes that some companies follow this policy in the hope of deflecting their employees from unionism. "Be that as it may," he continues, "the important point for the labour movement is that ownership in itself solves none of the problems of industrial relations. Determination of these relations lies with the agency that speaks with authority on production control: management with credit holding veto power. Whatever the type of ownership the problems of management and credit persist. In the days of individual ownership, ownership meant control. The corporation has separated ownership from authority to make industrial decisions. Though employee and popular ownership are heralded as presaging industrial democracy, both developments, unless properly organized and directed, will only place a new strangle-hold in the hands of the groups that profit through manipulation. Two ways are open—drift or mastery. The latter requires critical examination, research and constructive planning. Labour increasingly needs to participate in research undertakings. Small investors may work out a technique that will assure them proportionate power to protect holdings and to participate in decisions affecting their interests."

Mr. Herbert C. Hoover, United States Secretary of Commerce, speaking at a conference on industrial waste, held recently at New York, referred to another aspect of the same question as follows: "Perhaps dimly but with no less certainty, there is looming up in the American industrial world a definitely new relationship in the whole setting of industry. The ownership of utilities and large manufacture has to a large degree been divorced from management. The capital ownership of great service and production is rapidly being diffused over millions of individuals, none able to dictate management. The managers of older and settled industry are to-day rising out of the skill of the industry itself. And they are gradually coming into a new vision of relationships. That relationship is one of a tripartite responsibility to the consumer on the one hand, to the worker on another, and a regard for capital only to the extent that it shall be commanded on the best possible terms for the expansion and conduct of the industry. The savings we can make through applications of invention, through increase in skill, through elimination of collective waste, are bound to be divided over the consumer to attract business, divided over labour to secure service and contentment, more than over capital, because capital comes cheaper with increasing security."

Care of child immigrants in Canada

The Canadian Council of Child Welfare recently published a second report on juvenile immigration. (The general policy of this organization was outlined in the *LABOUR GAZETTE* for July, 1924, page 537). The first report on this subject discussed the general aspects of child immigration and its relation to Dominion and provincial problems, and outlined the main features of the Empire Settlement Act of 1922. The second report presents evidence of the growth of a more enlightened public opinion in Canada on this subject. It contains also the report and recommendations of the British Commission of inquiry which visited Canada in 1924, and describes the action taken by the Federal Government as the result of the interest shown by all concerned.

On the recommendation of the "Bondfield Commission" that the psychological tests of intending immigrant children should be strengthened, the Dominion Government has arranged that there will be a Canadian doctor in London, acting under the Dominion Department of Health, who will be concerned with the inspection of the children overseas. As to the placing of children in Canada, the

Government agrees with the recommendation of the Commissioners as to a previous inspection of the homes in which the immigrant children are to be placed. Each child, it is agreed, should have a separate room where possible, and in any case a separate bed, and no child should be placed in a home which has been rejected by a children's society as unsuitable. The Government also accepts responsibility as to visiting children after they have been placed, and will insist on at least one annual inspection in each case, or more if required. On the proposed age limit of 14 years, the Government had already ceased to grant passages for children under that age.

The British commission recommended that standard wage rates should be established, that wages should be paid quarterly, that non-payment of wages should be a sufficient reason for a child's immediate removal; and that children should as far as possible receive directly the wages they have earned. No action can be taken as to wage standards, but the Government agrees that wage earning children must receive at least a proportion of their earnings and thus become familiar with the value of money, rather than have everything laid up and paid out in a lump sum at 18 years of age or later. As to the suggestion that the number of immigrant girls should be increased the Government recognizes difficulties and dangers in placing young girls in situations and surrounding them with proper safeguards. No greater encouragement than now exists will therefore be offered, and unless greater safeguards can be provided the number of girls permitted is more likely to be reduced than increased.

The Canadian Council of Child Welfare proposes in future to supplement the action of the Government by developing community responsibility towards these children. Each child immigrant will be provided with one or two "friends" in the district, and other measures will be taken to take the children into the fellowship of the district in which they are placed.

Learning period for shop employees in Saskatchewan

An order was issued in June by the Minimum Wage Board of Saskatchewan amending Order No. 1, governing shops and stores (LABOUR GAZETTE, December, 1924).

The minimum wage for experienced female workers in this group remains at \$14 per week, but the rate for learners in the second month of service is raised by one dollar, and a fourth learning period of six months is added, making the entire learning period two years instead of

eighteen months. Learners will now be paid at the following weekly rates: \$7.50 per week for the first six months (unchanged); \$10 (instead of \$9) per week for the second six months; \$12 per week for the third six months (unchanged); \$13 per week for the fourth six months (formerly there were only three periods of six months each). Thereafter they will be considered to be experienced workers, and will be paid at not less than the minimum rate of \$14 per week prescribed for experienced workers. The new regulation comes into force on August 4, 1925.

Compounding compensation payments

The first case recorded in Alberta of commutation of the benefits payable to an injured workman under the Workmen's Compensation

Act, 1908, was reported from Calgary in June. The workman in this case was employed by the Canadian Pacific Railway Company in one of the occupations that come under the Act of 1908. In this connection it may be recalled that the running trades of the railways are excluded from the scope of the "Workmen's Compensation Act (Accident Fund)" of 1918, the later act under which a Workmen's Compensation Board was established, and these trades are therefore covered by the earlier act. The act of 1908 provides as follows in reference to commuted payments, etc.:—

"(1) For the purpose of settling any matter which under this Act is to be settled by arbitration, if any committee, representative of an employer and his workmen, exists with power to settle matters under this Act in the case of the employer and workmen, the matter shall, unless either party objects by notice in writing sent to the other party before the committee meets to consider the matter, be settled by the arbitration of such committee, or be referred by it in its discretion to arbitration as hereinafter provided.

(2) If either party so objects, or there is no such committee, or the committee so refers the matter or fails to settle the matter within three months from the date of the claim, the matter shall be settled by a single arbitrator agreed on by the parties, or in the absence of agreement by the Court, according to the procedure prescribed by Rules of Court."

8. d. Where it appears to the Clerk of the Court, on any information which he considers sufficient, that an agreement as to the redemption of a weekly payment by a lump sum, or an agreement as to the amount of compensation payable to a person under any legal disability, or to dependants, ought not to be registered by reason of the inadequacy of the sum or amount, or by reason of the agreement having been obtained by fraud or undue influence, or other improper means, he may refuse to record the memorandum of the agreement sent to him for registration, and refer the matter to the Court and the Court shall, in accordance with Rules of Court, make such order (including an order as to any sum already paid under the agreement) as under the circumstances may seem just.

Commutation of payments by the Workmen's Compensation Board is also permitted

under the act of 1918, but in cases of death or permanent total disability, or where the rate of disability is over 10 per cent of former earning capacity, commutation may only be made on the application of the workman.

In the case above mentioned the injured workman was a young man of 25 years, who lost one leg in an accident while in the company's service, and his expectation of life was 38.81 years. The sum required to produce \$10 a week for the full period on a basis of investment at 4 per cent, would be \$9,897.23. On a basis of 4½ per cent, \$9,479.60, and at 5½ per cent, \$8,283.60. The judge stated that while the workman had practically no education and absolutely no training in any trade or vocation, he was of fair intelligence and capable of being trained to perform some one of several occupations customarily performed by men who had lost one leg.

Progress of conciliation in trade disputes

Considerable attention has been given in the Union of South Africa during the past two years to the subject of the arbitration and settlement of industrial disputes. The Industrial Conciliation Act which took effect in April, 1924, was outlined in the LABOUR GAZETTE for June of that year. The Union Parliament has lately been considering an Emergency Powers Act, which in its conciliation sections, resembles the Industrial Disputes Investigation Act of Canada, providing for the establishment of representative Boards to deal with disputes affecting the public welfare. This bill however goes further than the Canadian Act in regard to the measures that may be taken by the Minister of Labour to insure that positive results shall follow from the reports of such Boards. This is done by a provision to the effect that, when it has been ascertained by a ballot that a two-thirds majority of either employers or employees is in favour of accepting the terms offered by the other party or by the conciliation board, the Minister may order a general resumption of work, or take such steps as he thinks advisable to effect a resumption of work. An account of this legislation will be given in a future issue, when the Act as amended has been received. The Industrial Conciliation Act, in the year that it has been in operation, has been, according to the *Official Labour Gazette* of South Africa, a potent factor in the adjustment of matters in dispute. Up to March 8, 1925, eleven conciliation boards had been appointed and had functioned under the Act, the workers concerned being municipal employees, building operatives, tramwaymen, mine workers, municipal mechanics, electric

power station employees, bakers, and reduction workers. The voluntary machinery provided in the Industrial Conciliation Act for the consideration and regulation of matters of mutual interest to employers and employees and the prevention and settlement of disputes between them takes the form of industrial councils. Any employer or employers' organization may agree with a registered trade union or group of registered trade unions for the establishment of an industrial council under certain conditions. Industrial councils are endowed with very extensive powers, and the terms of any agreements arrived at by these councils may be made legally binding, not only upon the parties to the agreement, but, if the council is sufficiently representative of the undertaking, industry, trade or occupation concerned, upon all employers and employees within a defined area, in that undertaking, industry, trade, or occupation.

The National Council of the Printing and Newspaper Industry in South Africa has been registered as an industrial council under the Act, this being the first body to be so registered. A national agreement reached by this Council was recently published, and the terms of the agreement apply to the printing industry throughout the Union.

International programme on social insurance

The proposals of the Seventh International Labour Conference in regard to Workmen's Compensation are given on another page of this issue. The International Organization now deals with compensation for industrial accidents as a department of the wider subject of "social insurance." This term is used to cover the risks of industrial accidents, sickness, maternity, old age, invalidity, premature death, and unemployment. Some of these subjects were covered by earlier draft conventions and recommendations, but as the *International Labour Review*, in its issue for June, points out, before the conference of 1924 there had been no preconceived plan or general policy on social insurance. Certain aspects of the subject—unemployment, accidents and maternity—had been dealt with, but rather from expediency than principle. Although the subject of a general social insurance policy was raised in 1919 by the Czechoslovak Government, the Conference was obliged during the economic pressure after the war to confine its activities to the pressing questions of the day. The International Labour Office since its creation, has had a technical Social Insurance Service. This Service was reorganized in October, 1923, and equipped with a staff competent to handle a more general plan, and was the mainspring

in the machinery of preparation for the recent Seventh Conference.

The International Office's plan of work on social insurance since the beginning of 1924 has been based on the "General Report on Social Insurance" which was reviewed in part in the last issue of the *LABOUR GAZETTE*. This General Report, when completed, will comprise four series of reports, as follows:—

(1) two reports on compensation for industrial accidents and occupational diseases respectively, to be the basis for discussion of the two Draft Conventions, one on compensation for industrial accidents, the other on compensation for occupational diseases; these reports had a direct bearing on the agenda of the Seventh Session;

(2) a series of reports on insurance against other risks—sickness; maternity; old age, invalidity, and premature death; and unemployment; these deal with possible subjects for the agenda of subsequent Sessions;

(3) a report on general problems of insurance; here the subject is classified not by risk but by problem; scope of insurance legislation, benefits to be paid to the insured, financial systems, distribution of costs, and administrative organization;

(4) national surveys on the results achieved by the enforcement of legislation on social insurance.

Minimum wage for women in Quebec

Certain amendments that were made at the recent session of the Quebec Legislature in the Women's Minimum Wage Act were noted in the last issue of the *LABOUR GAZETTE*. The Provincial Government announced early this year that the members of the Board under the act would be appointed during the current year, and it was understood that Mr. Gustave Franco, of the provincial executive of the Trades and Labour Congress of Canada, would be the first Board chairman. Criticism of some features in the act has been made from the side of the employees and also from that of the employers. *La Vie Syndicale*, the official organ of the Catholic and National Union of Montreal, while approving of the principle of the act as meeting a real social need, finds that the powers of the Board are not sufficiently great to make it effective. "If it is to be supposed that this law would benefit working women, it would be necessary that the orders of the Board should have the support of the Factories Act, as in Ontario, where the factory inspectors are obliged to report to the Minimum Wage Board any violations of the Minimum Wage Act that may be brought to their notice." Criticism from the manufacturers' side, on the contrary, is to the

effect that the powers conferred on the Board are too drastic. A recent report of the Executive Committee of the Quebec Division of the Canadian Manufacturers' Association states that "some alarm had been felt by manufacturers in the smaller industrial centres over the putting into operation of an act for minimum wages for women. A delegation had waited on the Government, pointing out that manufacturers were not only willing, but anxious to pay fair wages to their employees, but that there were certain provisions in the act which they thought placed too much power in the hands of an independent commissioner. The act was brought into force, but the Government gave assurance that nothing would be done under the act which would in any way disturb the industrial activities of the province."

Local government and workmen's compensation

The Department received last month the full report of the Quebec Investigation Commission on Compensation in Labour Accidents. An outline of this report was given in the February issue of the *GAZETTE*. The Commission was appointed under a provincial act of 1922 to study the subject of workmen's compensation in general, having specially in view the improvement of the Quebec Act. It will be recalled that the employees' recommendation that a board should be established to administer the act was not adopted by the Commission as a whole. The French act, which was the original model of that of Quebec, is described in the report as being "the most effective in existence under the system of individual responsibility and judicial decision, due to the mechanism with which it is surrounded and the guarantee through the State fund."

The characteristic feature of the French system is in the extent to which it makes use for administrative purposes of the existing machinery of local government. In France, cases of permanent incapacity or death come under the jurisdiction of the local civil court on a report presented by the mayor of the locality, who receives the first notification that an accident has occurred. The mayor must hand his report, or a medical certificate, to the justice of the peace of the district within five days of the occurrence of the accident. The magistrate at once proceeds to make a personal investigation, visiting the victim if necessary, and forwards the records of his inquiries to a judge of the district civil court. Cases of permanent incapacity or death come under the jurisdiction of this court, subject to appeal. The president of the court, in the five days after he receives the records,

summons before him the injured man or his representatives, and the employer or his insurers. In cases of agreement the court fixes the basic earnings of the victim and the reduction in earnings caused by the accident. In cases of disagreement the parties are called upon to sue before the court, which decides all summary matters. If there is insurance, the insurer may be substituted for the employer in the Court's decisions. In case of non-payment by the parties mentioned, the workman or his dependants go to the mayor of their municipality and present the proofs of their claim. They are then given an order on the National Pension Fund. In case of non-payment of the daily indemnity or of other expenses, the worker goes to the bailiff assigned to him by the justice of the peace and requests him to prosecute the debtor. The Commissioners found that this method is always satisfactory. Should the bailiff fail to act promptly the claimant may apply directly to the department in control of the insurance of industrial accidents. The guarantee fund, to which the Commission's report refers, is made up by the payment of centimes added to the contributions on the letters patent issued to all firms coming under the Compensation Act. The National Pension Fund has recourse against the employers and insurance companies whose debts it has paid. All insurance societies covering these risks are under state control and are obliged to carry a reserve fund determined by state regulations.

National Industrial Council in

building industry A National Industrial Council for the Building Industry of the Union of South Africa has been established, following a conference held at Johannesburg last March at the instance of the Minister of Labour. The objects of the National Council are stated in the *Official Labour Gazette* of South Africa as being the complete organization of employers and employees throughout the country and the establishment and regulation of uniform working hours and conditions. Employees will have the greatest possible security of earnings and employment, and be accorded the best possible conditions of health and comfort in their work. Agreements relating to wages and working conditions will be applied throughout the industry. The enforcement and maintenance of fair conditions of tenders and contracts for employers, and steps to ensure continuity of employment and the training of apprentices, will be secured by co-operative effort. Any legislation affecting the building industry will be

considered and reported upon. District committees of the council, with appropriate powers of investigation and executive authority, will be established and maintained, and special committees may be appointed for particular purposes.

The constitution provides for the conduct of the business of the council by ten representatives each of employers' and employees' associations, holding office for two years and eligible for re-election. Of these, one representative is to be chairman of the council and also of an executive committee consisting of four representatives on the council, two employers and two employees. One member is to be vice-chairman of the two bodies. The council is to meet as occasion arises. The executive is to have full power to consider all matters connected with the industry, and may appoint sub-committees. Certain provisions with regard to voting are included. Any matter upon which a decision cannot be reached after three meetings of the council is to be referred to an umpire selected by the council, assisted by two representatives of employers and two representatives of employees thereon. Failing the election of an umpire by the council, the Department of Labour is to be requested to make an appointment. The decision of the umpire is to be final. Provision is made for the appointment of a secretary to the council, and the council's expenditure, which is controlled by the executive committee, is to be met by an equal contribution by employers and employees, collected through the medium of the former. No strikes or lockouts may take place during the period covered by a national agreement.

New chairman Ontario Compensation Board

The appointment of Mr. Victor A. Sinclair, K.C., ex-M.P.P., Tillsonburg, to the position of chairman of the Workmen's Compensation Board in succession to Mr. Samuel Price, who is retiring on account of ill-health, was announced in the last issue of the *LABOUR GAZETTE*. The Premier of Ontario in announcing Mr. Price's retirement, paid high tribute to the value of the past services of the former chairman: "The Government realizes that his withdrawal," he said, "will be a great loss to the public, and particularly to the work with which he has so long been identified. The position he filled is one which calls for exceptional qualifications and fairness of mind, which he has displayed throughout the administration of his duties. Through the instrumentality of Mr. Price the workmen's compensation system has become firmly established in Ontario and is now one of the

most beneficial undertakings of the Province." Mr. Sinclair, the new chairman, was formerly Mayor of Tillsonburg, and became the representative of South Oxford in the Provincial Legislature in 1914.

Welfare plans criticized

Dr. Charles A. Lippincott, manager of the co-operative department of the Studebaker corporation, read a paper at the twelfth annual meeting of the Society of Industrial Engineers held at Cleveland in May, in which he criticised "welfare work" as carried out in some industries. "Many efforts have been made," he said, "to bring about closer relations between management and men. The problem of human relations can be solved only on an ethical basis; it cannot be solved by any welfare plans that were formerly popular and are still used in some plants. I do not believe in welfare plans; they involve paternalism, and men resent it. They say: 'Give me what is due me, and I will look out for myself.' Men do not want gratuities. At one time managers thought that the more servile their men were the better was their labour situation. We are getting away from that now, and I am opposed to anything that savors of paternalism or gratuity. . . . The big problem to-day is the education of men to get them to understand the policy of the Board of Directors. It is dollars and cents for the company to have foremen who are leaders rather than drivers of men. It makes no difference how modern the equipment and methods of a plant may be. The whole matter comes back to the men. Industry has spent millions in other directions, but has not spent much in solving the method of handling men intelligently; and until it does, it will not get far in solving the problem of human relations."

Dr. Lippincott pointed out that one result of the announcement by Henry Ford several years ago of a minimum wage of five dollars a day—a much higher rate than any other company was paying at that time—was that the labour turnover was reduced from approximately 500 per cent to less than 14 per cent per year. Consequently, although he was paying a much larger amount in wages per employee, he was actually saving money, on account of the small labour turnover, and he had no trouble in getting all the good labour he required.

Commenting on this address, the *Canadian Textile Journal* says: "Dr. Lippincott may be entirely right as regards paternalism and gratuities; but one thing is certain, and that is that it will pay any concern to refuse to tolerate slovenliness in any form, to encourage

accuracy and neatness among its workmen, and to make their surroundings as comfortable and clean as circumstances will permit. Don't allow dirt and rubbish to accumulate. Keep the windows clean. Dirty windows keep out a large amount of light; they offend the eye, and they tend to promote shiftlessness. Above all, try so to arrange things that the men themselves will be desirous of helping to accomplish this. We know this last can be done because we have seen it tried; and the ultimate effect on the men was to make them take pride in their surroundings and pride in their work; they were glad to co-operate in enforcing and observing the company's rules, and the number leaving its employ was a very small percentage of the whole.

Co-operative buying in Saskatchewan

At the Co-operative Conference held in July last year at Regina, Saskatchewan, a Collective Buying Committee was appointed which immediately set to work to deal with the task before it. At present about sixteen societies in the province participate in the collective buying scheme. English Co-operative Wholesale Society tea, at the rate of 1,000 pounds per month, is being dispatched by the Co-operative Association at Davidson to various points in the province. Samples of English Co-operative Wholesale Society merchandise are on view at this point, but it is not possible, however, for all managers in this large province to undertake the journey to Davidson, and the Collective Buying Committee have advised the societies that a box will be packed and dispatched by the Davidson Co-operative Association, containing samples of English Co-operative Wholesale Society commodities for inspection. In this way it is hoped to make British Co-operative products more widely known and to secure orders for the delivery of goods through the intermediary of the Davidson Co-operative Association, which, by agreement with the English Wholesale Society, holds goods on consignment for distribution as ordered by the Co-operative societies.

Correction

In the article in the last issue of the *LABOUR GAZETTE* on the Joint Sanitary Board for the Garment Industry at Toronto, the name of Mr. Sol Polakoff was erroneously included among the representatives of the Cloak Manufacturers' Protective Association. Mr. Polakoff is a representative of the Joint Board of the International Ladies' Garment Workers' Union and of the Joint Board of the Cloak Makers of Toronto.

New regulations were issued in Alberta in June, under the Public Health Act, in connection with barbers, barber shops and barber training schools, and in connection with the heating and ventilation of theatres.

A new agreement concluded between the International Ladies Garment Workers' Union, and certain firms at Montreal, is outlined in this issue in the section "Recent Industrial Agreements". Provision is made under this agreement for the establishment of a Joint Board of Sanitary Control in the Cloak Industry. The Board will be composed of an equal number of employers, union members and the public, and will prepare a sanitary code for this industry. A similar board has been established recently at Toronto, modelled on a plan that has been in operation in New York for the past twelve years. (LABOUR GAZETTE, June, 1925, pages 547 and 574.)

The total number of cases of poisoning, anthrax and epitheliomatous and chrome ulceration in Great Britain and Northern Ireland, reported under the Factory and Workshop Act during May, 1925 was 50. Eight deaths were reported during the month, four due to epitheliomatous ulceration, three due to lead poisoning and one due to anthrax. In addition seven cases of lead poisoning (including one death) among house painters and plumbers came to the knowledge of the Home Office during May, but notification of these is not obligatory.

Governor Small of Illinois has signed an anti-injunction bill which prevents court interference with peaceful picketing and persuasion. This law was secured as the result of the activities of the Illinois state Federation of Labour, and was opposed by the Illinois manufacturers' association and allied interests. The bill passed the lower house by a narrow margin.

During May, 1925, the number of assisted passages to Canada from Great Britain and Ireland granted under the Empire Settlement Act of 1922, was 881. During the first five months of 1925, 5,300 passages were granted. The number of actual departures during the same period was 4,933. From 1922 to 1924 the assisted passages granted totalled 12,169 and the departures 11,623, of which there were 1,367 passages granted to the province of Ontario and 1,356 departures from that province. The figures include the applicants and their dependants.

The number of work people, other than seamen, reported as killed in the course of their employment in Great Britain and Northern Ireland during May, 1925, was 193, as compared with 188 in the previous month and with 236 in May, 1924.

The Ottawa City Council adopted a rule last month that every man who is hired for city work must be a British subject, either by birth or naturalization. All employees, other than those now on the monthly pay list, must be married men or householders who support a household.

The United States Bureau of Labour Statistics is planning a series of studies in the efficiency of labour. This work will probably begin about July 1. The Bureau has already made surveys of the boot and shoe industry, and will next make a survey of the pottery and steel industries.

Mr. Neville Chamberlain, Minister of Health in Great Britain, announced recently that the Government proposed to make drastic changes in the existing poor law system. A Royal Commission prepared a voluminous report on this subject about fifteen years ago, condemning many features of the system, but no effect has yet been given to their recommendations. The government's programme in connection with widows, orphans, and old age allowances was described in the last issue of this GAZETTE.

The British Empire Service League, an organization of former service men of the Empire, held a convention at Ottawa in June, under the presidency of Field Marshal Earl Haig of Bernersyde. The convention decided to establish a central bureau in London to supervise industrial emigration from Great Britain to the dominions and colonies, and further to endeavour to secure the co-operation of the overseas units of the League in a general plan for emigration.

The Board of Police Commissioners at Hamilton, Ontario, are considering the question whether all persons doing electrical work in the city should have a local license. The Consolidated Municipal Act of Ontario, as amended in 1922, provides that by-laws for examining, licensing and regulating electrical workers may be passed by councils of towns and cities having a population of less than 100,000, and by boards of police commissioners of cities having a population of not less than 100,000. The city of Hamilton is in the latter class.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

THERE was a further increase of employment at the beginning of June. This increase was greater than that registered on June 1, 1924, but the employment index number was slightly lower than on that date.

The employment situation at the end of June, 1925, was reported by superintendents of the Employment Service of Canada to be as follows:—

In the Maritime Provinces, where excellent crop prospects were reported, farmers were busy. The fishing industry was also in a busy state. Conditions in the logging and pulp cutting industries were very favourable considering the season, and quite a number of pulp cutters and pulp peelers were being despatched to vacancies. The continuance of industrial trouble in the coal mining districts of Nova Scotia maintained the practically complete cessation of all activity in that industry. Manufacturing with only nominal changes was reported as steady, except for the iron and steel industry in Cape Breton, which appeared to be slackening to some extent.

In the Province of Québec farmers were very busy with summer work, and in numerous cases were hiring extra farm hands. Summer bush work was proceeding satisfactorily. Manufacturing continued to be fairly steady, only minor fluctuations being reported. Building and construction were reported as active, particularly in and around Hull and Sherbrooke. From the Montreal district railway construction was reported as engaging quite a number of additional labourers. Trade throughout the province was reported as having shown improvement during recent months, and a further general improvement in conditions was anticipated.

Generally speaking, fewer applicants seemed to be presenting themselves for work at the public employment offices in Ontario. Farm demands were continuing to absorb the services of substantial numbers. Manufacturing, especially in the south-western section of the province, continued the improvement reported in the spring and early summer, and practically all changes reported in this district were for the better, although some minor adverse changes were also reported. The northern section of the province still reported employment activities as quiet. Although railroad construction, mining and bush work were steady, they were not absorbing to any very large extent the number of workers available for vacancies. Throughout the province gen-

erally construction was reported as reasonably active.

The demand for farm help in Manitoba, while it had declined from that of the previous month, was still fair. Most other lines of work were rather quiet with sufficient applicants available. From Winnipeg was reported a shortage of women for some classes of domestic work.

The Saskatchewan superintendents stated that farm demands were steady, and that the supply of applicants for this work now seemed to have reached a nice balance with the demand for their services. Construction activity, though generally speaking fair, seemed to be more than well supplied with suitable labour for, with the exception of a temporary shortage of bricklayers in Saskatoon, no demand for building workers which could not be met locally, was reported. General labour was reported as plentiful from practically all points. A shortage of female domestic workers for country work, which is somewhat of a permanent phenomena throughout the summer season in this province, was again reported.

As is customary at this particular season of the year the demand for farm help in Alberta did not exceed the available supply of labour. Building construction was reported as quiet in most centres, while railroad construction was still absorbing the services of some men. Coal mining, in addition to being seasonally quiet, was being to some extent hampered by industrial trouble in the Drumheller district.

British Columbia reported farming as quite busy. Although improvement in the logging and lumbering industries was reported from one or two localities, most districts reported these industries as rather quiet. Metal mining was showing considerable activity, but surpluses of suitable labour were reported in some districts. The fishing industry at coast points was satisfactorily brisk. While construction work of all kinds was giving employment to substantial numbers no large undertakings appeared to be underway which would absorb the services of workers who would be available for such employment. Generally speaking, slight surpluses of labour existed throughout the province for almost every industry.

EMPLOYERS' REPORTS

Employment at the beginning of June showed a further upward movement, the gains exceeding those indicated on the same date of last year when the index number was very slightly higher.

On the whole, there was expansion in all groups of industries, with the exception of trade. The greatest gains were in construction, manufacturing and transportation.

Improvement was recorded in all provinces, but the increases in Quebec and Ontario were most pronounced. In the Maritime Provinces, there were large increases of a seasonal nature, in lumber mills and fish canneries. Construction and quarrying also afforded more employment. In Quebec, transportation, construction and manufacturing recorded the greatest gains, but logging was much more active on account of river driving operations and quarrying and asbestos mines were also busier. Trade, however, showed a falling-off in employment. In Ontario, construction and manufacturing reported the most marked expansion; within the latter group, the lumber industry gained considerably. Transportation, logging and mining also registered increases, though on a smaller scale. In the Prairie Provinces, there was greater expansion than on the same date of last year. Construction and maintenance, particularly of road-beds, and railway transportation recorded very marked improvement, while manufacturing was also more active. Trade, on the other hand, afforded less employment. In British Columbia, manufacturing, especially of iron and steel and food products, logging and construction reported increases, but mining, shipping and trade were slacker.

Of the seven cities for which separate tabulations are made, five—Montreal, Quebec, Ottawa, Hamilton, and Winnipeg—recorded heightened activity, while in Toronto and Vancouver there were declines. In Montreal, shipping showed pronounced seasonal gains and construction and manufacturing were also more fully engaged. Trade, on the other hand, was quieter than at the beginning of May. In Quebec, there were general increases, of which those in transportation were most noteworthy. In Toronto, seasonal losses in garment factories offset increases in construction and some other branches of manufactures. In Ottawa, further improvement was indicated, chiefly in lumber mills and building construction. In Hamilton, manufacturing establishments generally were more fully employed, as were also firms engaged in construction. In Winnipeg, there was practically no change in the situation; improvement in manufactures and construction was nearly offset by losses in trade. In Vancouver, there was a contraction in employment, repeating the downward movement noted on June 1, 1924. Shipping, trade and tin-can factories registered reductions, but there were general, though slight gains in other industries in that city.

Manufacturing as a whole afforded increased employment, largely in the lumber, fish canning, pulp and paper, building material, brewing, tobacco, electric current, rubber, and mineral products divisions, while garment and woollen factories were slacker. Owing to river driving operations, principally in Quebec, there was an increase in logging at the beginning of June. Losses in coal and metallic ore mines were more than offset by improvement in asbestos mining and quarrying. Communication was very slightly more active, on account of improvement on telegraphs. Steam and electric railways and water transportation registered increased activity, as did also the three branches of construction—building, highway and railway. The service group was more fully employed than in the preceding month, but trade, both wholesale and retail, recorded declines.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning June, 1925.

TRADE UNION REPORTS.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The trade union situation at the close of May as indicated by reports tabulated from 1,483 local unions with an aggregate membership of 151,284 persons was more favourable than in the previous month, 7.0 per cent of the members being idle on May 31 as compared with 8.7 per cent at the end of April. Improvement was also registered in comparison with May of last year when 7.3 per cent of the members were out of work. New Brunswick, Quebec, Ontario, Manitoba and British Columbia unions were all better employed than in April. The most substantial gains were shown in Ontario and British Columbia, due in the former to greater activity in the building trades, and in the latter to improvement generally throughout the different industries. Reports were received from 411 unions of manufacturing workers with 44,018 members, 5,307 or 12.1 per cent of whom were unemployed, as compared with percentages of 12.3 in April and 12.9 in May of last year. Brewery workers were considerably more active than in April, and cigar makers, hat, cap and

glove workers, and glass, leather and wood workers were also more fully engaged. Increases on a smaller scale were reported by printing tradesmen, iron and steel and garment workers and metal polishers. On the other hand jewelry workers were decidedly less active, and reductions were also reported by textile workers and paper makers. The situation for coal miners in Nova Scotia who were not affected by the strike conditions was not so favourable as in April, and in Alberta unemployment was prevalent due to lack of orders for lignite coal. Asbestos miners in Quebec reported all their members at work. The seasonal expansion in the building trades was quite marked during May, as shown by the reports received from 161 unions with 16,475 members, 7.0 per cent of whom were idle as compared with 18.4 per cent in April. The situation was also very much better than in May of last year when 15.5 per cent of the members were out of work. Electrical workers were the only building tradesmen to report less employment than in April. In comparison with May of last year employment for steam shovel and dredgemen, bridge and structural iron workers and electrical workers was in lesser volume, and in all other trades improvement was shown. More work than in April was afforded in the transportation group, the percentage out of work being 3.9 per cent at the end of May as compared with 4.7 per cent in the previous month. Navigation workers were not quite so busy, but in the steam and street and electric railway divisions employment was on a higher level. Retail shop clerks reported a slightly larger percentage of unemployment than in April. A greater volume of employment was afforded hotel and restaurant employees, barbers and stationary engineers and firemen, but theatre and stage employees registered more slackness. Fishermen reported no inactivity. Employment for lumber workers and loggers increased considerably.

EMPLOYMENT OFFICE REPORTS.

During the month of May, 1925 the offices of the Employment Service of Canada made 29,751 references to employment and effected a total of 28,533 placements. Of these the placements in regular employment were 19,143, of which 15,567 were of men and 3,576 of women. The placements in casual work numbered 9,390. Employers notified the Service of 30,650 opportunities for employment, of which 21,238 were for men and 9,412 were for women. The number of applicants for work was 39,953 of whom 29,356 were men and 10,597 women. A slight decline in the volume of business trans-

acted is shown when the above figures are compared with those of the preceding month, as well as with those of the corresponding period of last year, the records for April, 1925 showing 35,563 vacancies offered, 43,166 applications made and 32,188 placements effected, while in May 1924 there were recorded 33,219 vacancies, 43,445 applicants for work, and 31,093 placements in regular and casual employment. This decrease was partly due to a lessened demand for farm help, the placements in that group being less than in April, though the total for the two months exceeded that for the corresponding period of last year.

PRODUCTION REPORT

The Dominion Bureau of Statistics reported that the production of pig iron in Canada in May was 63,204 long tons, an increase over the April output of 60,065 of 5 per cent. With the exception of the 63,932 tons produced in March this year, it was the greatest tonnage recorded since May, 1924. The entire output for the month consisted of basic pig iron made for the further use of the reporting firms. The cumulative production for the five months ending May, was 245,009 tons, as compared with 370,142 tons in the same period last year. The year's output to date consisted of 213,791 tons basic iron; 18,621 tons foundry iron and 12,597 tons of malleable iron. Five furnaces were in blast at the end of the month located as follows: 2 at Sydney, Nova Scotia; 2 at Sault Ste. Marie, Ontario, and 1 at Hamilton, Ontario. The daily capacity of the active furnaces was 2,075 tons or about 41 per cent of the possible daily output of all the blast furnaces in the Dominion. Ferro-alloys at 2,293 tons marked a slight increase over the 2,262 tons produced in April; the increase consisted mostly of the grade containing 80 per cent manganese. A small quantity of ferro-silicon was also produced.

In May the production of steel ingots and castings in Canada advanced to 100,250 long tons, or 13 per cent over the 88,355 tons of April. Although steel castings fell slightly to 1,637 tons from the 1,883 tons of the previous month, this loss was more than offset by the advance in the tonnage of steel ingots, which rose to 98,613 tons as compared with 86,472 tons in April. The total output of steel ingots and castings for the first five months of the year was 360,557 tons, or 14 per cent over the tonnage produced in the same period of 1924. This output was composed of 352,421 tons steel ingots and 8,136 tons steel castings, all of the ingots and 8 per cent of the castings being intended for the further use of the reporting firms.

The report from the Department's correspondent at Cobalt shows that twenty-one cars, containing approximately 1,650,374 pounds of silver ore, were shipped from the Cobalt Camp up to and including June 27; this compared with seventeen cars of silver ore containing 1,308,454 pounds in the previous month. The Nipissing Mine shipped 291 bars, containing 333,887.37 ounces of silver, and The Mining Corporation of Canada shipped 169 bars, containing 169,709.14 ounces of silver, making a total of 460 bars, containing 503,596.51 ounces of silver, shipped during the month of June, as compared with 438 bars containing 487,530.08 ounces of silver shipped in the previous month.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of May, 1925; Intercolonial Coal Mining Company, Limited, Westville, 20,164 long tons; Greenwood Coal Company, Limited, 5,913 long tons. As complete figures showing the coal production in Canada for May are not yet available, the statistics for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch shows that 856,974,494 feet of timber, board measure, was scaled in the province during May, 1925. The total includes 413,211,409 feet of fir; 211,817,332 feet of cedar; 60,046,482 feet of spruce; 107,662,203 feet of hemlock; 20,262,995 feet of balsam; 11,172,233 feet of yellow pine; 14,770,626 feet of white pine; 2,243,853 feet of jack pine; 14,325,536 feet of larch; and 1,461,825 feet of miscellaneous species.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$18,245,738 during May, 1925, as compared with \$17,656,889 in the previous month and \$19,350,770 in May, 1924.

The gross earnings of the Canadian Pacific Railway are given in a preliminary statement as \$12,467,612 for May, 1925, as compared with \$12,608,789 for April and \$14,426,679 for May, 1924.

Coal Statistics for April.—There was a reduction of 29 per cent in the output of coal from Canadian mines during the month of April, as compared with the month of March, the total output amounting to 554,835 tons as against 778,759 tons in March. The reduction was due largely to the strike in Nova Scotia and the seasonal decline in demand. Compared with the average for the month during the

five preceding years the decrease was 46 per cent or 466,354 tons. The total number of men employed in the coal mines of Canada during April was 17,088, of whom 12,290 worked underground and 4,798 on surface, as compared with a total of 24,477 in March, of whom 18,452 worked underground and 6,025 on surface. Production per man was 32.5 tons for April, as against 32.1 tons per man for March; but during April the production per man-day was 2.0 tons, as compared with 2.3 tons in March.

Coke production in Canada during April amounted to 131,484 tons, as compared with 138,783 tons in March, 102,686 tons in February and 101,132 tons in January.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics the value of the building permits issued in May in sixty cities throughout Canada showed an increase of 1.7 per cent over April, 1925. There was also an increase of 4.6 per cent over the value of the permits issued in May 1924. The total for May, 1925, was \$15,296,080, for April, 1925, \$15,042,519, and for May, 1924, \$14,621,100.

The total Canadian construction awards, as compiled by MacLean Building Reports, Limited, were \$33,229,900 as compared with \$34,052,100 in the previous month and with \$26,185,200 for the same month last year. Residential building amounted to \$10,997,900 or 33.1 per cent of the June total; business building totalled \$9,593,300 or 28.9 per cent; industrial building \$1,521,000, or 4.6 per cent, and public works and utilities \$11,117,700, or 33.4 per cent. The activity was distributed among the provinces as follows: Ontario, 41.1 per cent; Quebec, 31.7 per cent; Prairie Provinces, 8.9 per cent; British Columbia, 11.8 per cent; and the Maritime Provinces, 6.5 per cent.

FOREIGN TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in May, 1925, the merchandise entered for consumption amounted to \$75,894,532 as against \$72,058,330 in May, 1924. The domestic merchandise exported amounted to \$96,356,747 in May 1925 as compared with \$59,909,377 in April and \$104,150,715 in May, 1924. Foreign merchandise exported amounted to \$1,117,804 in May, 1925, and \$1,160,352 in May, 1924.

The chief imports in May, 1925, were: iron and its products, \$16,767,921; fibres, textiles and textile products, \$13,508,180; non-metallic minerals and products, \$11,827,358; and agricultural and vegetable products, mainly foods, \$11,079,472.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$39,577,450; wood, wood products and paper, \$21,945,998; animals and animal products, \$9,525,454; agricultural and vegetable products, other than foods, \$8,364,546 and non-ferrous metals and their products, \$7,504,935. In the two months ending May, 1925, exports of agricultural and vegetable products, mainly foods, were valued at \$58,033,733; wood, wood products and paper at \$37,894,460; animals and animal products at \$17,597,179; non-ferrous metals and their products at \$13,315,600; and agricultural and vegetable products, other than foods, \$11,657,939.

Strikes and Lockouts

The time loss due to industrial disputes was greater in June than in May, 1925, or June, 1924. There were in existence during the month 19 disputes, involving 13,906 employees, and resulting in a time loss of 313,179 working days, as compared with 15 disputes in May, involving 12,975 workpeople and resulting in a time loss of 299,369 working days. In June, 1924, there were recorded 26 disputes, involving 12,296 employees and resulting in a time loss of 214,790 working days. Ten new strikes and lockouts commenced during June, with a time loss of 13,526 working days. Three of the strikes and lockouts commencing prior to June, and five of the strikes and lockouts commencing during June, terminated during the month. At the end of the month, therefore, there were eleven strikes and lockouts on record affecting 12,209 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected but which had not been formally called off.

Prices

Retail food prices continued to move to slightly lower levels. The cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.44 at the beginning of June as compared with \$10.48 for May; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. Prices of milk, butter, cheese, sugar potatoes, mutton and pork were slightly lower while the prices of eggs, beef, bacon, rolled oats, rice and beans were slightly higher. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.67 at the beginning of June as compared with \$20.73 for May; \$20.22

for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined slightly for June, being 158.8 as compared with 159.1 for May; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; and 201.7 for June, 1919. In the grouping according to chief component material five of the eight main groups were higher, two were lower, while one showed little change. The movement in prices was again dominated by the changes in grain prices. The Vegetables and Their Products group and the Iron and Its Products group both declined. In the former increases in the prices of flour, rubber, foreign fruits and sugar were more than offset by the decline in the prices of grains, tea and potatoes. The groups which advanced were: Animals and Their Products due to higher prices for hogs, western cattle and eggs; Fibres, Textiles and Textile Products because of advances in the prices of cotton, silk and wool; Wood, Wood Products and Paper due to slight increases in ground wood pulp, British Columbia fir and in shingles; Non-Ferrous Metals and Their Products mainly because of higher prices for lead, zinc and solder; and Non-Metallic Minerals and Their Products because of increases in the prices of gasoline and anthracite coal. The Chemical and Allied Products group was practically unchanged.

Council of Social Assistance

An Act has been promulgated in Poland for the establishment of a Council of Social Assistance, partly elected on a district basis and partly nominated by the Government, to aid the Ministry of Labour and local authorities, in a consultative capacity, in the handling of social legislation and problems. A scheme has also been prepared for the setting up of a Central Economic Council, to advise the Government on social, economic and financial policy.

The President of the International Co-operative Alliance, Dr. Goedhart, of Holland, advises workmen desiring to start co-operative enterprises not to begin by attempting to organize societies for production, but first to learn how to operate in distributive societies and go in later for production.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JUNE

DURING the month of June the Department of Labour received an application for the establishment of a Board of Conciliation and Investigation from certain employees of the Montreal Light, Heat and Power Consolidated, being members of the following unions: The International Brotherhood of Electrical Workers, Local 492; Gas Workers Federal Labour Union No. 16571, and the International Association of Machinists, Local Lodge 631. These employees are engaged in the production and distribution of electricity and gas. The Montreal

Light, Heat and Power Consolidated operates the Montreal Light, Heat and Power Company, The Cedar Rapids Manufacturing and Power Company, the Royal Electric Company, The Montreal Gas Company, Standard Light and Power Company, Provincial Light, Heat and Power Company, and the Lachine Rapids Hydraulic and Land Company; etc. A special representative of the Department investigated the circumstances of the dispute, and as a result of his mediation negotiations between the parties were being resumed at the close of the month.

ANNUAL SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act, 1907, for the fiscal year ending March 31, 1925, and from March 22, 1907, to March 31, 1925.

TABLE I. SHOWING PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1924, TO MARCH 31, 1925

Industries affected	Number of applications for Boards received*	Number of Boards established	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication and other public utilities—			
(1) Mines—			
Coal.....	3	2	1
(2) Transportation and communication—			
(a) Steam railways...	4	2	0
(b) Street and electric railways.....	4	0	0
(c) Shipping.....	1	1	0
(d) Telegraphs.....	4	3	0
(3) Miscellaneous—			
Light and power.....	3	1	0
II. Disputes not falling clearly within the direct scope of the Act.....	3	0	0
Total.....	*22	9	1

*Including three cases left over from preceding year, as stated below.

The proceedings under the Act during the year include three cases in which certain proceedings had taken place during the preceding year, namely, disputes between (1) Toronto Electric Commissioners and certain of their employees being linemen, groundmen and others concerned in the work of power trans-

mission and distribution and being members of the Canadian Electrical Trades Union, Toronto Branch; (2) Cities of Port Arthur and Fort William and their employees in street railway service, members of Division No. 966, Amalgamated Association of Street and Electric Railway Employees of America, and (3) various shipping companies trading to the Port of Montreal, Que., and certain of their employees being members of the Syndicated Longshoremen of the Port of Montreal.

TABLE II. SHOWING PROCEEDINGS BY INDUSTRIES FROM MARCH 22, 1907, TO MARCH 31, 1925

Industries affected	Number of applications for Boards received	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication, other public utilities and war work—		
(1) Mines—		
(a) Coal.....	71	11
(b) Metal.....	20	5
(c) Asbestos.....	1	0
(2) Transportation and communication—		
(a) Steam railways.....	192	7
(b) Street and electric railways	105	7
(c) Express.....	11	1
(d) Shipping.....	32	0
(e) Telegraphs.....	21	1
(f) Telephones.....	7	0
(3) Miscellaneous—		
(a) Light and power.....	24	3
(b) Elevators.....	1	0
(4) War work.....	30	1
II. Disputes not falling clearly within the direct scope of the Act.....	123	2
Total.....	638	38

The figures contained in Table II may be thought to show discrepancies as compared with those appearing in the yearly summary. A closer examination will, however, show the respective statement to be in agreement. A complete statement of proceedings for a year must show all disputes dealt with during the fiscal year. The figures of the yearly statement include, therefore, disputes carried over from the previous year and which are counted

in the summary of that year's proceedings. Thus the same dispute may properly figure in the annual statement for each of two years. In the statistical recapitulation covering several years, as above, it is necessary that no dispute shall be counted more than once, and account is taken of the number of applications received during the year and thus brought within the purview of the statute.

STRIKES AND LOCKOUTS IN CANADA DURING JUNE, 1925

THE number of strikes and lockouts in existence during June was 19, as compared with 15 during May. The time loss for the month was greater than in June, 1924, being 313,179 working days, as compared with 214,790 working days in the same month last year. The considerable time loss and number of employees in June, 1925, was chiefly due to a dispute in the coal mining industry of Nova Scotia.

Date	Number of disputes	Number of employees involved	Time loss in working days
June, 1925.....	19	13,906	313,179
May, 1925.....	15	12,975	299,369
June, 1924.....	26	12,296	214,790

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Ten disputes, involving 1,812 workpeople, were carried over from May. Three of the strikes and lockouts commencing prior to June, and five of the strikes and lockouts commencing during June, terminated during the month. At the end of June, therefore, there were on record eleven strikes and lockouts as follows: coal miners, Nova Scotia; cigarmakers at Montreal; hat and cap makers at Toronto; fur workers at Montreal; fur workers at Toronto; papermakers at Fort William; printing compositors and stereotyper at Edmonton; tie peelers at Edmonton; moulders at Owen Sound; plasterers at Toronto, and shipbuilders at Vancouver. The record does not include minor disputes as de-

scribed in the previous paragraph, nor does it include any dispute which the union or organization concerned has not yet called off, although information has been received indicating that employment conditions are no longer affected thereby. Information is available as to six such disputes, namely, clothing workers (ladies' garment makers), Toronto, commencing February 5; moulders at Galt, August 2, 1922; moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925, and street railway employees at St. John, June 29, 1921.

Information was received in the Department during June, too late for publication in the June issue of the LABOUR GAZETTE, of a strike of 21 printing pressmen employed in a printing firm in Vancouver which lasted one day. The pressmen objected to a change of hours without overtime pay claimed under the terms of the union agreement. The dispute was settled under the terms of the agreement.

Certain disputes in coal mines in Western Canada in regard to changes in wages and new agreements have been reported in the press as strikes. These are dealt with in a special article.

Of the disputes which began during June, five were for increased wages, two were against reduction in wages, one for recognition of the union, one involved union jurisdiction, and one was for other causes affecting wages and working conditions. Of the strikes and lockouts which terminated during June, four were in favour of employers, three in favour of employees or substantially successful, and one ended in a compromise.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, NANAIMO, B.C.—On June 5, a strike of 1,090 coal miners occurred at Nanaimo, following the proposal of the company for a reduction of 60 cents a day in the bonus of 90 cents a day provided for in the following clause in the agreement:—

"The Company agrees to pay all employees covered by this Agreement a Bonus of ninety cents (90c.) per day worked, being an addition to all rates and wages herein specified. It being mutually understood by the Company and its Employees, that any increase, or decrease in the Bonus herein mentioned, shall be governed by competitive conditions."

A reduction in wages had been made in other mines in the Island, as stated in the *LABOUR GAZETTE* for June. During the discussion of this proposal the employees attempted to secure a modification in the reduction but were unsuccessful. Mr. J. D. McNiven, Deputy Minister of Labour for British Columbia, arrived in Nanaimo on the first day of the strike, and negotiations were carried on with his assistance, but no settlement was reached. After about a week the miners voted to return to work at the reduction proposed and work was resumed June 13.

COAL MINERS, NOVA SCOTIA.—An account of events in this dispute is given in a special article on page 661.

CLOTHING WORKERS, TORONTO, ONT.—The strike of 100 clothing workers which occurred at Toronto on May 9, for recognition of the union was settled June 15, the employees securing their demands.

HAT, AND CAP MAKERS, TORONTO, ONT.—On February 10 a strike of 15 hat and cap makers took place in Toronto. The employer had proposed that the staff should be reduced during the slack season, but the union insisted on the enforcement of the rule that the work should be divided equally among all the members of the staff. The company agreed to this June 17, and work was resumed June 22.

HAT AND CAP MAKERS, TORONTO, ONT.—Twelve hat and cap makers ceased work on June 17, demanding recognition of the union. At the end of the month this strike remained unterminated.

PRINTING COMPOSITORS AND STEREOTYPERS, EDMONTON, ALTA.—On June 19, a strike involving 19 employees in a newspaper printing office was declared at Edmonton. The employer had proposed a reduction of five per cent in the rate of wages, \$45.30 per week, under the union agreement. The paper then ceased publication and the strike remained unsettled at the end of June.

TIE PEELERS, EDMONTON, ALTA.—A cessation of work affecting 130 tie peelers in a creosoting plant occurred at Edmonton on June 26. The peelers demanded an increase from four and one-half cents per tie to six cents per tie. At the end of June this strike was unterminated.

TRUNK MAKERS, MONTREAL, QUE.—The strike of 54 trunk makers which occurred at Montreal on May 22, against a reduction of ten per cent in the rate of wages, was terminated June 4, a compromise being effected whereby a reduction of five per cent was accepted.

CARPENTERS, WINDSOR, ONT.—On June 1, some 400 carpenters went on strike at Windsor for an increase of 12½ cents per hour. The rate in effect had been \$1 per hour. Negotiations were carried on which resulted in an agreement being reached whereby the carpenters resumed work June 11, at \$1 per hour until November 1, and a lower rate to be agreed upon for the winter months.

PLASTERERS, TORONTO, ONT.—Thirteen plasterers in the City of Toronto went on strike June 11, over the question of union jurisdiction as between the Operative Plasterers and Cement Finishers' International Association and the Brick Layers, Masons and Plasterers' International Union. This trouble started in the Southern States and spread to other parts of the United States and to Toronto. This strike remained unsettled at the end of June.

LABOURERS, NORTH SYDNEY, N.S.—A strike affecting 18 labourers engaged on the construction of a wharf occurred at North Sydney on June 3, for an increase of five cents per hour in the rate of wages. They had been receiving 25 cents per hour. Negotiations were carried on and the increase granted. Work was resumed June 6.

SHIPBUILDERS, VANCOUVER, B.C.—At noon on June 16, 100 employees in ship repairing establishments, boilermakers, riveters, etc., went on strike for an increase in wages. The rate being paid was \$5.50 per day for journeymen and \$4 per day for helpers. The strikers demanded \$6.50 per day for journeymen and \$4.25 per day for helpers. At the end of June this strike remained unterminated.

SEAMEN, VICTORIA, B.C.—A dispute involving 24 Chinese seamen occurred at Victoria, B.C., when the men refused to perform their duties and demanded an increase in wages. It appeared that they had renewed their contract until the end of the year some time ago at Vancouver, and had refused to work and left the ship at Tacoma, Washington. The United States Immigration authorities returned them to the ship and they were, therefore, brought to Victoria on the ship. When they still continued to refuse to work they were arrested. In the police court at Victoria the strikers were sentenced to six weeks in jail with hard labour, and they were also ordered to be deported to China at the expiration of

their sentence. The sailing of the ship had then (June 26) been delayed four days. A note on the legal decision referring to this strike will be found elsewhere in the present issue of the LABOUR GAZETTE.

TELEPHONE OPERATORS, SPRINGHILL, N.S.—A strike of six telephone operators occurred at Springhill on June 5. This trouble arose

out of the fact that one of the operators demanded sick benefits to which under the conditions of the company's benefit scheme, he was not entitled. Negotiations were carried on and a settlement was reached to be in force for one year. Some of the employees did not agree to this arrangement and resigned their positions. Work was resumed June 10.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to June, 1925.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Nova Scotia.....	11,463	286,575	Commenced March 6; failure to agree on certain changes in wages, and stoppage of credit at company's stores. Underminated.
MANUFACTURING—			
<i>Tobacco and liquors:</i>			
Cigarmakers, Montreal, Que..	5	125	Commenced March 24, against a reduction in wages. Underminated.
<i>Clothing, including knitted goods:</i>			
Clothing workers, Toronto, Ont.....	100	1,100	Commenced May 9, for recognition of the union. Work was resumed June 15, employees securing their demands.
Hat and cap makers, Toronto, Ont.....	5	70	Commenced February 10, for changes in working conditions. Work resumed June 17, the employees securing their demands.
<i>Fur and leather products (other than boots and shoes):</i>			
Fur workers, Montreal, Que....	420	10,500	Commenced April 1, failure to agree on certain changes in agreements and on proposed substitution of separate agreements. Underminated.
Fur workers, Toronto, Ont....	16	400	Commenced February 20, for recognition of the union. Underminated.
<i>Pulp and paper:</i>			
Papermakers, Fort William, Ont.....	19	475	Commenced May 20, for renewal of agreement without changes in working conditions. Underminated.
<i>Iron, steel and products:</i>			
Moulders, Owen Sound, Ont....	12	300	Commenced January 19, against a reduction in wages. Underminated.
<i>Miscellaneous:</i>			
Trunk makers, Montreal, Que.	54	108	Commenced May 22, against a reduction in wages. Settled by negotiations; work resumed June 4; compromise.

(b) Strikes and lockouts commencing during June, 1925.

MINING NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Nanaimo, B.C....	1,090	7,630	Commenced June 5, against a reduction in wages. Settled by negotiations and work resumed June 13; in favour of the employers.
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Hat and cap makers, Toronto, Ont.....	12	144	Commenced June 17, for recognition of the union. Underminated.
<i>Printing and publishing:</i>			
Printing compositors and stereotypers; Edmonton, Alta....	19	190	Commenced June 19, against a reduction in wages. Underminated.
<i>Saw and planing mills:</i>			
Tie peelers, Edmonton, Alta..	130	520	Commenced June 26, for increased wages. Underminated.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Carpenters, Windsor, Ont.	400	3,400	Commenced June 1, for increased wages. Settled by negotiations and work resumed June 11; in favour of employers.
Plasterers, Toronto, Ont.	13	221	Commenced June 11, as to union jurisdiction. Unterminated.
<i>Miscellaneous:</i>			
Labourers, North Sydney, N.S.	18	54	Commenced June 3, for increased wages. Settled by negotiations and work resumed June 6, at increased rates.
<i>Shipbuilding—</i>			
Shipbuilders, Vancouver, B.C.	100	1,250	Commenced June 16, for increased wages. Unterminated.
TRANSPORTATION AND PUBLIC UTILITIES—			
<i>Water transportation:</i>			
Seamen, Victoria, B.C.	24	96	Commenced June 23, for increased wages. Strikers arrested and sentenced to jail, June 26.
<i>Telephone system:</i>			
Telephone operators, Springhill, N.S.	6	21	Commenced June 5, other causes affecting wages and working conditions. Work resumed June 10; in favour of employers.

DISPUTES AND AGREEMENTS IN COAL MINING IN CANADA DURING JUNE, 1925

IN the June issue of the LABOUR GAZETTE reference was made to agreements entered into between certain coal mine operators and their employees in Western Canada, involving changes in wages following similar arrangements described in the May issue. The areas affected were Southern Alberta, South Eastern British Columbia and Vancouver Island. During June other mines in the district came under similar arrangements. In Vancouver Island a strike lasting about a week involving about a thousand employees, occurred at Nanaimo and is described in the regular article on strikes and lockouts in Canada.

In Alberta the steam coal areas had been the first to be affected, beginning with that part of the Crow's Nest Pass field in British Columbia, the section in Albert being affected next, and then the "domestic" coal fields. Early in June the coal miners in the neighbourhood of Lethbridge voted to enter into an agreement with the operators, providing for a wage scale similar to that adopted in the Crow's Nest Pass field given in the LABOUR GAZETTE for May, pp. 513-514.

A dispute was reported between the City of Lethbridge and its employees in a mine operated by the city when the council, by reso-

lution, reduced the wages to the same extent as in the other mines. Latest reports indicated the dispute was to be arbitrated.

The miners in the Southern Alberta, leaving the United Mine Workers of America, formed an organization entitled the Lethbridge Miners' Federation. Later this organization, with some of the other miners' associations recently formed, entered into a federation called the "Mine Workers' Union of Canada," and invited other similar organizations to adhere to it.

Revision of District 18 Agreement (Alberta)

About the middle of June the officers of the United Mine Workers of America for District 18, met the coal mine operators of the Red Deer Valley in the neighbourhood of Drumheller and entered into an agreement for a reduced scale of wages. The agreement between the Western Canada Coal Operators' Association and District 18 of the United Mine Workers of America, signed October 10, 1924, in settlement of the strike in existence from April 1, 1924, to that date, had provided that it was to be in force for three years, subject to six months' notice after March 31, 1925. When in March, 1925, the Western Coal Oper-

ator's Association announced that such notice terminating the agreement on September 30, 1925, would be given, the District Executive met the officers of the Operators' Association on March 17, and discussed a revision of the agreement to take effect prior to September 30. No agreement to revise the existing agreement, however, was reached. Between that date and the middle of June many of the operators belonging to the Western Canada Coal Operators' Association resigned from the Association and entered into agreements with their employees who in turn, to a great extent, left the United Mine Workers and in some cases organized independent local association as referred to above.

Operators in the Red Deer Valley, while members of the Western Canada Coal Operators' Association which has had agreements with the United Mine Workers of America, covering the principal mines in Southern Alberta since 1907, some time ago organized a local association entitled the "Red Deer Valley Coal Operators' Association," and it was with this organization the United Mine Workers of America entered into an agreement on June 17. This provided for a reduction of 15 per cent in contract rates and for a day wage scale equivalent to that adopted for the mines in the Alberta part of the Crow's Nest Pass field (LABOUR GAZETTE, May, 1925, page 514). Provision was made that employees laid off during slack periods would be given preference when work was resumed, an arrangement stated to be very much desired in the Drumheller field and sought for by the union for many years.

A number of the miners in the neighbourhood of Drumheller on hearing of the agreement reducing the wage scale held a meeting and voted to leave the United Workers of America and to organize an independent union. This was entitled the "Red Deer Valley Miners' Union" and its officers then proposed to the coal mine operators that an agreement should be entered into. The latter, however, stated that they were parties to the agreement between the United Mine Workers of America, and the Red Deer Valley Coal Operators' Association.

The mines in the Red Deer Valley, to a great extent, had not been working during the summer and when the new wage scale was announced the miners who had left the United Mine Workers of America and who were not employed, proceeded to picket the mines which began to operate at the reduced wage scale. The District President reported that the agreement was unanimously approved by the miners remaining with the union. Following this

miners were reported to be intimidated and assaulted by the pickets and numbers of these were arrested by the Provincial police on charges of besetting, assault, etc. One of the pickets was shot and seriously wounded by a police officer.

Agreements similar to the above were entered into during the latter part of June and early in July with mine operators in the western part of Alberta, some of which had not been operated for some years.

Edmonton District

In the coal mines in and near the City of Edmonton the agreement between the operators and the Edmonton and District Miners' Federation expired June 30. The operators proposed a decrease of ten and twenty per cent, and the miners offered to accept a reduction of seven per cent. As no agreement was reached the miners went on strike on July 1st.

Nova Scotia

The dispute involving some 11,000 coal miners in Nova Scotia in a cessation of work from March 6, remained unsettled at the end of the month. On June 1st the Minister of Labour, on being requested by the executive of District 26 United Mine Workers of America to mediate, offered to act as arbitrator if both parties would accept his services. The miners agreed but the company refused. On June 3, orders were given by the President of District 26 that picketting should be resumed and should be "100 per cent," to go into operation on June 4. At the New Waterford power and pumping station where maintenance men had been allowed to remain at work, as it supplied light and water to certain mining towns, these were withdrawn. The company officials then began to operate this station, as they had been operating other stations to some extent from the beginning, but were expelled by pickets on the afternoon of the same day, and three of the office staff were injured. On June 5, seven union members were arrested charged with unlawful assembly in connection with picketting at the New Waterford power plant. More arrests followed and by June 7, 20 miners were either in jail or out on bail. On June 8, a conference was held at Glace Bay when a committee of citizens conferred with the vice-president of the company and the president of District 26. During these conferences the miners' representatives had agreed to accept the findings of an arbitration board that might be appointed, with either the Minister of Labour or Rev. Clarence McKinnon as chair-

man. Dr. McKinnon was chairman of the Conciliation Board in 1919-1920 which made the "McKinnon award." This the company refused. The question proposed that the miners should resume work on a reduced wage scale. The company was willing to recognize the United Mine Workers of America, but wanted the question as to the checkoff left to a referendum. The miners' representatives refused these terms. On June 11, company officials accompanied by company police took possession of the New Waterford power house and began to operate it but were ejected by men reported to be striking miners. In the struggle one miner was killed and several other miners and company police were injured. The local authorities then proceeded to secure the assistance of the militia, following the procedure laid down by the amendment made by Parliament last year to the Militia Act in reference to the calling out of the active militia in aid of the civil power. The act, as amended, provides that troops may be requisitioned by the Attorney-General of a province upon receiving notification from a judge that such assistance is required. Accordingly, the required notification having been received from Judge Finlayson, of Sydney, the Attorney-General requisitioned troops, which were sent from Halifax, arriving in Sydney on June 12. Provincial police were also sent to Cape Breton Island. Looting of Company stores and the burning of outlying buildings belonging to the coal operators, had been reported from day to day. On June 14, at the request of the company, the Minister of Labour left Ottawa for the scene of the strike and during the week following met both the miners and officials of the company in an attempt to bring about a settlement. During the conferences the Miners' District Board authorized the Minister to advise the vice-president of the company, that pending a settlement of the strike, all maintenance men would be instructed to report for duty. This offer was not accepted as the company claimed that on account of conditions in effect in the mines, many of the maintenance men could not be placed at work for some time. The vice-president handed the Minister a statement outlining the basis upon which the company would agree to a settlement. This statement was handed to the Miners' District Board but they found certain proposals to which they strongly objected. The District officers placed the proposals before the locals of the District, but these were rejected by the miners. The following letters contain the proposals made by the company

and include the letter of the Minister of Labour to the President of District 26:—

Sydney, June 18, 1925.

J. W. MACLEOD, Esq.,
President District No. 26:

DEAR MR. MACLEOD,—I am handing you herewith a copy of a letter received from J. E. McLurg, Vice-President British Empire Steel Corporation, Limited, which was handed to me late last evening by Mr. McLurg.

The letter contains the proposals of the company for the settlement of the strike of miners in effect in District No. 26 since March 6th last.

The various questions referred to in Mr. McLurg's letter and outlined as a basis for settlement of the existing dispute have been discussed between Mr. McLurg and myself at conferences of the past two days; and my view is that it would be impossible to secure proposals for the settlement of the strike more acceptable to your Board.

My personal earnest recommendation to you and your associates on the District Board is, that the proposals contained in Mr. McLurg's letter, under the circumstances, should be accepted as a basis of settlement and that the matters dealt with should be at once submitted to the members of your organization on strike for acceptance or rejection. Your Board is at liberty to indicate to your membership *my personal view that more acceptable terms of settlement* of the existing troubles cannot be secured, and the men on strike should, therefore, in my opinion, authorize the District Board to enter into an agreement with the company on the terms outlined.

This letter is to also confirm recognition of the verbal offer made by your Board yesterday at *my request*, to authorize the return to work at once of maintenance employees pending final settlement. This particular question can be further dealt with and determined when your position as to the acceptance or rejection of Mr. McLurg's proposals is indicated.

Yours truly,

JAMES MURDOCK,
Minister of Labour.

Sydney, N.S., June 17, 1925.

The Hon. JAMES MURDOCK,
Minister of Labour,
At Sydney, N.S.

DEAR SIR,—As a result of the conversations you and I have had yesterday and to-day, in connection with the settlement of the strike of our mine employees, at your request I am giving you the following statement of terms under which we are prepared to enter into a contract with the mine employees of the Dominion Coal Company, Limited, Nova Scotia Steel and Coal Company, Limited, Cumberland Railway and Coal Company, Limited, and Acadia Coal Company, Limited.

1. The companies will enter into a contract with the U. M. W. of A., District 26, on the understanding that in the interests of the men, the public and the companies, no official of the companies shall be required to meet an officer of the District Board who is a Communist, a member of the Workers' Party or who is known to profess Communistic principles.

2. There are a number of men who have been actively engaged in and guilty of lawlessness and disorder. Those men will not now nor hereafter be employed by the companies in any capacity whatever.

3. The date of the expiration of the contract will be November 30, 1926.

4. (a) The scale of datal wages shall be the new scale prepared by us, being the 1924 scale reduced by approximately 10 per cent. For instance, the surface datal rate of \$3.50 has been reduced to \$3.35, or by 4.3 per cent. The percentages of reduction are—on

datal surface rates, 8.47 per cent; on datal underground rates, 8.9 per cent.

(b) Time and one-half for overtime and double time for Sundays and legal holidays *will not be paid* to employees in and around a mine except to mechanics engaged on repairs either above or below ground and to such employees who at the time may be acting in the capacity of helpers to the mechanics.

(c) The scale of contract rates for cutting, shooting and loading coal, both Machine Mining and Hand Mining, speaking generally, has been reduced by 10 per cent with the exceptions hereinafter mentioned.

5. The companies must be relieved of the check-off for the making of deductions from the wages of employees for dues, fees or assessments for any labour organization.

6. The price of coal to workmen will be the same as in 1924, \$3.60 per gross ton for run-of-mine coal at the mine or coal yard. Where it is necessary to transport the coal over a railway in order to make delivery, the cost of transportation shall be added to the price.

7. The price of explosives to miners will be actual cost delivered, plus cost of handling to mines.

8. Section 16, as quoted below, of the contract which expired on January 15, 1925, shall be included in the new contract.

NO. 16—MAINTENANCE MEN DURING SUSPENSION OF MINERS

In case of either local or general suspension of mining, either at the expiration of this contract or otherwise, the engineers, firemen, pumpmen, fan men and such other maintenance men necessary to protect the mines shall not suspend work, except at the option of the operator, but shall fully protect all the company's property under their care and operate fans and pumps and lower and hoist such men or supplies as may be required to protect the company's property, and any and all coal necessary to keep up steam at the company's coal plants. But it is understood and agreed that the operator will not ask them to hoist any coal produced by non-union labour for sale in the market. The operator, at his option, to retain only such engineers, firemen, pumpmen, fan men and such other maintenance men necessary to protect the mines as are required, but with the understanding that all of the engineers, firemen, pumpmen, fan men and such other maintenance men necessary to protect the mines employed at the time of the suspension shall be entitled to an equal division of the work.

Should the interest of the engineers, firemen, pumpmen, fan men and such other maintenance men necessary to protect the mines be directly involved in any issue at the expiration of this contract, and any engineers, firemen, pumpmen, fanmen and such other maintenance men necessary to protect the mines cease work the United Mine Workers of America will provide competent men to perform the emergency work above recited at the scale price in effect at the time of the suspension, subject to any subsequent settlement."

9. The contract to be made shall state the rates of pay of the men employed underground and on the surface mining and handling coal up to the point where it is put in railway cars. This includes men engaged in upkeep of mine equipment at the collieries. The following classifications of men whose rates of pay and conditions of work were covered by former contracts shall not be included in the new agreement:

(a) Shotfirers and Examiners. For the past two years the shotfirers and examiners have repeatedly requested the company to make them officials, rightly claiming that the importance of their work, and to a considerable extent the efficiency with which they carry out their duties, made it necessary that they should not be included as members of the U. M. W. but should be classed as officials of the companies.

While this strike has been in progress arrangements have been made with the shotfirers and examiners whereby they are engaged as officials and therefore their rates of pay will not be covered by the new contract.

- (b) Railway roundhouse employees.
- (c) Railway freight handlers.
- (d) Machine shop employees, Glace Bay and Springhill.
- (e) Pier employees, shippers and trimmers.
- (f) Banking station employees.
- (g) Electrical department employees.
- (h) Construction department employees.
- (i) Property department employees.
- (j) Power house employees.
- (k) Railway employees, Acadia Coal Company.

NOTE.—Railway sectionmen have already been taken out of the U. M. W. and at Sydney Mines the men employed in the machine shop, construction department, property department, electrical department have never been members of the U. M. W. of A.

10. For some years certain working conditions have existed in the mines of the Acadia Coal Company, which conditions do not exist in the mines operated by the other companies. If a new contract is made the conditions referred to will be changed and made similar to those in the other colliery districts. These are as follows:—

(a) The scale of contract rates, speaking generally, has been reduced by 10 per cent with the exception of the Longwall rate at the Vale Colliery which has been only slightly changed and in our opinion made more favourable to the men working under it. Another exception is in the contract rates for Hand and Machine Mining. The rates for Hand Mining have been reduced 10 per cent but the rates for Machine Mining which formerly were higher than the rates for Hand Mining have been reduced by more than 10 per cent to make them lower than the rates for Hand Mining.

(b) The payment of time and one half and double time for overtime, formerly paid to men employed on continuous service, such as running pumps, fans, etc., will not be paid in the future.

(c) The payment of the differential for the extra shift known as the double shift, is discontinued and will not be paid in the future.

Yours very truly,

(Sgd.) J. E. McLURG,

Vice-President.

On June 24, water and electricity were again supplied to New Waterford for the first time in twenty days. By the end of June about 2,000 troops were stationed in Nova Scotia. On June 30, the Minister of Labour notified the President of District 26 that he could secure no modification of the terms offered by the company. This followed conferences between the President of the Company and the Prime Minister of Canada, and also between the Minister of Labour and the directors of the company.

An Act providing for a 44-hour week which passed the legislature of Queensland, Australia, at the end of 1924, became effective on July 1. When the bill was under discussion it was stated that it would not affect industry seriously, as a 44-hour week was already in existence under most of the trade agreements in which union labour was concerned.

Strikes and Lockouts in Great Britain and Northern Ireland during May

THE British *Ministry of Labour Gazette* for June contains the following table which analyzes the disputes in progress in May, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in May			Number of workpeople involved in all disputes in progress in May	Aggregate duration in working days of all disputes in progress in May
	Started before May 1	Started in May	Total		
Mining and quarrying.....	7	18	25	19,000	157,000
Metal, engineering and shipbuilding.....	6	5	11	3,000	14,000
Textile.....	8	6	14	3,000	8,000
Building, decorating, etc.....	4	4	8	1,000	12,000
Other.....	9	14	23	1,000	11,000
Total, May, 1925..	34	47	81	27,000	202,000
Total, April, 1925..	26	44	70	25,000	122,000
Total, May, 1924..	30	56	86	36,000	398,000

Of the 47 disputes beginning in May, 8, directly involving 4,000 workpeople, arose out of proposed reductions in wages; 14, directly involving 1,000 workpeople, on other wages questions; 6, directly involving 3,000 workpeople, on details of working arrangements; 10, directly involving 6,000 workpeople, on questions of trade union principle; and 9, directly involving 2,000 workpeople, on other questions. In addition, about 10,000 workpeople were involved, either directly or indirectly, in 34 disputes which began before May and were still in progress at the beginning of that month. The number of new and old disputes was thus 81, involving about 27,000 workpeople, and resulting in a loss during May of about 202,000 working days.

Settlements were effected in the case of 27 new disputes, directly involving 10,000 workpeople, and 18 old disputes, directly involving 3,000 workpeople. Of these new and old disputes, 11, directly involving 5,000 workpeople, were settled in favour of the workpeople; 13, directly involving 3,000 workpeople, in favour of the employers; and 21, directly involving 5,000 workpeople, were compromised. In the case of 3 disputes, directly involving 3,000 workpeople, work was resumed pending negotiations.

Eight-Hour Day for Domestic

The *New York Times* describes in a recent issue the work of a domestic service bureau in New York that is based on the principle of a working day of eight hours for this class of labour. The bureau has been developed from an experiment begun twelve years ago by a householder who received 200 answers to an advertisement for an 8-hour day domestic worker. The plan pursued is as follows: A cook applies for a position. She is sent to a model kitchen, where she works a day, cooking meals, cleaning the pantries and kitchen, sometimes polishing the silver, and doing other odd jobs. If she is found to be an expert worker she is put on the bureau's list and sent out for either emergency or permanent work as she prefers. If she does not prove expert, but wishes to perfect herself in different branches of house work, she is given an opportunity to do so.

The other branch of the bureau's work has to do with the specific house to be equipped with a perfect staff of workers. First comes a "job analysis." This determines number and kind of workers needed. A time estimate

is made, and to each assistant is assigned certain hours and certain tasks. If a cook prepares lunch and dinner, then one of the maids gets the breakfast.

Many reasons are given for the demand for more freedom by to-day's home assistants. Some want to live at home because of small children, others because they have dependent mothers, fathers and aunts. Some want to study. One cook, it is reported, is putting her two daughters through college; another part-time assistant is devoting her afternoons to dressmaking, while an excellent French cook has exhibited several of her paintings in recent exhibits.

The twelfth Congress of the German trade unions will be opened on the 31st August at Breslau. The following are among the items on the agenda:—Social legislation in Germany; the question of organisation; industry, trade and finance and the trade unions; discussion of the rules of the General German Federation of Trade Unions.

LABOUR LEGISLATION IN CANADA IN 1925

Measures Passed at the Recent Session of the Parliament of Canada and of the Legislature of New Brunswick

THE Fourth session of the Fourteenth Parliament of the Dominion of Canada opened on February 5 and terminated on June 27. The most outstanding enactment of the session in the field of labour legislation was the act to amend the Industrial Disputes Investigation Act, 1907. The amending act, the text of which as passed by Parliament was given in the last issue of this GAZETTE, limits the application of the act of 1907 to matters that are not within the legislative authority of any province, thus relieving the difficulty that had arisen from the recent judgment of the Judicial Committee of the Privy Council, declaring the act to be *ultra vires* of the Parliament of Canada in regard to certain of its provisions. The various works to which the provisions of the act may be applied hereafter are enumerated in the amending act.

Government Annuities.—The Government Annuities Act of 1908 was amended to provide that annuities may be issued for \$10 a year or over. The minimum annuity that could be purchased under the act formerly was \$50. The Minister of Labour explained in the House of Commons that the reason for suggesting this change was that a number of employers desired to purchase outright annuities of amounts about \$10 as presents or bonuses for employees who have been with them for many years.

There are three plans under which single cash payments may be made for the purpose of securing an annuity:—under plan "A", in event of death before 65, the purchase money with 4 per cent compound interest will all be returned to the purchaser or his legal representatives. After 65, annuity ceases with the last payment received by the annuitant prior to his death. Under plan "B", in case of death before the annuity begins, there will be no return of any part of the purchase money. Under the "10-year guaranteed plan," in event of death before 65 the purchase money with 4 per cent compound interest will be returned. If the annuitant lives to be 65 the annuity will be paid in any event for 10 years, and will be continued as long thereafter as he may live.

Supposing the annuitant to be 45 years of age an annuity of \$10 could be purchased under plan "A" for \$40.25, under plan "B" for \$25.88 and under the "10-year guarantee plan," for \$47.80.

Old Age Pensions.—The action taken in Parliament on the proposal to establish a system of old age pensions in Canada is outlined in a separate article in the present issue of the GAZETTE, containing the report of the Special Committee recommending the holding of a Dominion-Provincial conference on this subject during the recess.

Compensation for Government Employees.—The act of 1918, as amended in 1919, providing compensation where employees of His Majesty are killed or suffer injuries while performing their duties, was further amended by the repeal of section 1, subsection (4), which required any employee who is a contributor to the Provident Fund and who becomes permanently disabled while on duty to elect whether he will take the benefits of the Intercolonial and Prince Edward Island Railways Employees' Provident Fund Act or the benefits of the Provincial Workmen's Compensation Act. The repeal of subsection (4) permits such an employee to enjoy the benefits of both acts. The same act was further amended by a new provision, effective as from May 24, 1919, that for the purposes of the act the term "compensation" is deemed to include medical and hospital expenses. Ordinarily under the compensation laws of the various provinces a person who is entitled to compensation under the Workmen's Compensation Act is also entitled to certain indemnities for medical and hospital expenses. When the Dominion Act of 1918 was framed it was made to cover compensation only, and the purpose of the amendment was to place Dominion employees upon the same basis as other employees so far as any right to medical and hospital expenses is concerned. The amendment was made retroactive so as to authorize payments already made for medical and hospital expenses.

Pensions of Canadian Mounted Police.—The Royal Canadian Mounted Police Act was amended so as to give the Government authority to increase the rates of pension to officers, their widows and constables granted prior to the dates mentioned, so as to provide an increase in the pensions in view of the increased rates of pay provided for in the amendments to the main Act down to and including July 7, 1919, when chapter 69 of 1919, "An Act to amend the Royal North-

west Mounted Police Act", was assented to, but the increases in the pensions are not to be retroactive. Increases in the salaries of officers and men have been provided for by amendments to the main Act and the new amendment increased the pensions in accordance with the increase in salaries provided for from time to time down to and on the seventh day of July, 1919, and not later, the increases to pensioners not to be retroactive.

Post Office Employees.—The Civil Service Act of 1918 was amended so as to enable the Civil Service Commission to appoint experienced employees of Postmasters of offices paid by percentage on revenue, when the status of such offices is changed to the staff basis. It was for all practical purposes a re-enactment of section 12 of chapter 8 of the statutes of 1910, but modified in such a way as to make the procedure regarding appointments to the Civil Service, conform to the procedure at present in effect, that is, on certificate of the Civil Service Commission. In Post Offices where the Postmaster is paid by percentage on revenue, the Postmaster is required to employ and pay whatever assistance is necessary to properly carry on the work. In staff Post Offices all the employees, including the Postmaster, are paid from Parliamentary Appropriation, in accordance with the Civil Service classification.

Section 12 provides that: "When it has been determined by the Governor in Council that any post office not under The Civil Service Act is to be brought under the said Act, any clerk or other employee then employed in such office, and who has been continuously employed for a period of two years, immediately preceding the date on which the office is brought under the said Act, shall be considered as eligible for appointment under this Act, irrespective of age and without having to pass the Civil Service examination, and such clerk or employee may be paid the same salary as he had theretofore received in such office; provided that such salary shall not exceed the maximum salary of the class in the Civil Service to which he is appointed."

Civil Service Superannuation.—The Civil Service Superannuation Act of 1924 was amended so as to extend for one year the period within which civil servants must elect whether or not they will come under the operation of the new act, the new limit being July 19, 1926.

British North America Act.—The opening speech from the Throne intimated that the House of Commons would be asked to sanction the calling of a conference between the

federal and provincial governments to consider the advisability of amending the British North America Act with respect to the constitution and powers of the Senate, and in other important particulars. A Dominion-Provincial conference will accordingly be held during the present recess, which will discuss the question of the Senate and that of the legislative authorities of the Dominion Parliament or the Provincial legislatures in regard to old age pensions, and other matters on which an agreement is desired.

Bills not Passed.—A proposed amendment to the Criminal Code, which had not completed its final stages when Parliament prorogued, would have restored the section of the act relating to sedition, which had been repealed by section 4 of chapter 46 of the Statutes of 1919. This section was contained in the Criminal Code from 1892 until 1919, providing that no seditious intention shall be presumed to exist if words of criticism of public meanness are uttered in good faith, or if attempts are made by peaceful means to point out errors or defects in the government or constitution, or to suggest remedies for some apparent grievance or difficulty. The object of the proposed amendment was to restore the law at it is formerly stood, as a safeguard in the public interest. Another proposed amendment to the Criminal Code, which also failed to reach the final stages, would have required that all papers, pamphlets and books shall bear the name of the printer or of those responsible for publication. It was explained that defamatory and libellous statements are often circulated, the names and addresses of the producers being unknown. The bill was based on British statutes enacted for the same purpose and in force for many years. One of these was an act of 1839 providing that every paper or book must bear the name and address of the printer; and another was an act of 1869, requiring that printers must preserve for six months a copy of each paper printed by him, writing thereon the name and address of the person who employed and paid him to print it, and must produce this copy on request of a justice of the peace within six months.

A proposed amendment to the Dominion Elections Act failed to complete its passage in the House. This bill would have repealed section 10, which prohibits unincorporated companies or associations, and incorporated companies or associations other than those incorporated only for political purposes, from contributing to election funds; and also section 11, which forbids canvassing by persons who are not electors and are not residents of Canada. A proposal to provide for the grant-

ing of a general public holiday on the afternoon of election days was accepted by the House, but was not incorporated in the amended bill as presented to the Senate. At the present time employers are required on polling days to allow to every elector in his employ at least two hours, other than the noon hour, for voting. A bill to amend further the Dominion Elections Act so as to provide for the single alternative vote at any election where three or more candidates have been nominated and only one is to be returned, was not proceeded with.

The Senate rejected a bill sent to them by the House of Commons, providing that "the Governor in Council may authorize advances to any one or more of the provincial governments for the purpose of assisting agriculture

by enabling the provinces to make long term loans to farmers; that such advances shall be secured by the issue and delivery to the Dominion of bonds of the provinces; that the aggregate of advances to be made by the Dominion shall not exceed ten million dollars (\$10,000,000).

The following motion was made in the House of Commons by Mr. Woodsworth, member for Winnipeg Centre, on March 23: "That in the opinion of this House, if at any time during the first two years after arrival in Canada, any immigrant is unable to obtain employment the federal government should accept full responsibility for his maintenance." A lengthy debate took place on this proposed resolution, but no action was taken by the House.

Acts passed at recent session of the Legislature of New Brunswick

THE fifth session of the Eighth Legislative Assembly of New Brunswick began on March 12 and terminated on April 30, 1925. (Accounts of recent labour legislation in the various provinces have appeared in the LABOUR GAZETTE as follows: British Columbia, January, 1925; Saskatchewan, February, 1925; Manitoba, May, 1925; Quebec, Ontario and Alberta, June, 1925; Nova Scotia (Industrial Peace Act), May, 1925; Parliament of Canada (Industrial Disputes Investigation Act), June, 1925, etc.).

The report of the Special Commission appointed by the Government in 1923 to inquire into the subjects of Mothers' Allowances and Minimum Wages for female employees in the province was presented to the Legislature, but no legislation was introduced on the lines of the recommendations contained therein.

Mechanics' Liens.—The Mechanics' Lien Act was amended for the purpose of ensuring greater security for liens by prohibiting certain practices which formerly limited the effectiveness of the act. Liens will not in future be prejudiced or destroyed if the holder takes a security, accepts a promissory note or bill of exchange, gives an extension of time for payment, or takes proceedings for recovery, unless he so agrees in writing. Moreover, the lien-holder will not lose his lien even if such a note or bill of exchange has been negotiated, provided that he still holds the note or bill at the time of proving his claim. The time limit of liens is not to be affected by this provision. A lien-holder who has extended the required time for payment must commence action for enforcement within the time prescribed by the act.

Free School Books.—Provision was made for the free distribution of the school books required by the prescribed courses of instruction to pupils not in advance of Grade V, or Ungraded Standard III, commencing with the school year beginning July 1, 1925. The free school books will be distributed by the superintendent of the School Book Department when he receives authority from the Lieutenant-Governor in Council to do so.

Vocational Education.—The Vocational Education Act of 1923 was amended so as to enable the Province to avail itself fully of the Dominion grant under the Technical Education Act, in connection with the construction of new technical schools. Under the Federal Act, the Dominion helps the various provinces to the extent of half the amount expended by them on technical education each year. The New Brunswick Vocational Education Act of 1923, however, provides that "the sum total of the amounts paid under this act, exclusive of Dominion grants, shall in no one year exceed \$50,000." This sum not being large enough to meet the cost of the extensive building programme in the Province, the Act of 1923 was amended so as to permit the issue of vocational school debentures, under the authority of the Provincial Loans Act, up to the amount of \$125,000, the amount so raised to be used for reimbursing the local vocational committee for building new schools. The limit of provincial expenditures after 1925 remains at \$50,000, including the payment of interest and sinking fund in connection with the new debentures. At the same time the period within which the local committees are to be reimbursed by the Province in respect to buildings was extended from June 30 to De-

cember 30, 1925. The section defining the method of initiating and providing local funds was amended by the addition of a new clause providing that when school trustees have applied for the establishment of a vocational school, and the ratepayers and the Provincial Board of Education have given their approval, funds for the school are to be provided by means of additional assessments "notwithstanding any limitation in any special or general act relating to school assessments for ordinary purposes."

Reference was made in the Legislature to the increasing interest shown in the work of the Agricultural School, and to the development of the dairy industry in which New Brunswick was stated to be rapidly assuming a foremost position among the provinces.

Contributory Negligence.—The Contributory Negligence Act was passed for the general purpose of making uniform the law of the provinces that have recently enacted such legislation. It provides that "where by the fault of two or more persons, damage or loss is caused to one or more of them, the liability to make good the damage or loss shall be in proportion to the degree in which each person was at fault." Liability will be apportioned equally if it should prove impossible to establish the degrees of fault.

Public Health.—County municipal councils were authorized to make an annual grant in aid of a hospital or of a health centre approved by the Department of Health, or to

a sub-district board of health in aid of a district or public health nurse appointed by the Department.

The opening speech from the Throne referred to the recent progress in the Province in regard to public health. "The incidence of communicable diseases has been lessened by over fifty per cent. Infant mortality has been reduced from 15.16 to 12.3 per thousand of population since 1920, a saving of from 500 to 1,200 lives annually. You will note with interest that my Government this year assumes the direct responsibility of the service of Medical Inspection of Schools throughout the Province, thus permanently relieving the municipalities of that portion of their budget relating to Public Health. Realizing the very large sacrifice of life caused by tuberculosis throughout the province, a loss preventable in a large measure, and that such prevention can truly be brought about largely by education, my Government has granted a sum of money sufficient to sustain a travelling diagnostician among whose duties will be the establishment of clinics in the more populous centres throughout the province, by means of which, education and other measures for the abatement of this disease may be diffused. During the past year, lay organizations have been established throughout the province, with the object in view, not only to assist and co-operate in their respective districts with the carrying on of child welfare, social hygiene and tuberculosis clinics, but in addition, to eventually assume full responsibility for their support."

Employment Agents in Japan

Among the labour legislation enacted in Japan in 1924 was a Home Department ordinance concerning the control of the recruiting of workers which was promulgated last December. The ordinance lays down the following rules:—The recruiting agent must, prior to the recruitment, submit to the Governor of the prefecture in which the place of the work is located a report clearly stating the name and place of the works or establishment where the workers are to be employed for work, the nature of the work, the working hours, holidays, particulars as to night work, wages, sleeping quarters, cost of boarding, period of engagement, relief and other allowances, etc. The character and status of the agent will be thoroughly examined before permission is given him to engage in the recruitment. The agent is required to carry with

him always the license granted by the Governor of the prefecture in which he operates. This license is liable to be withdrawn at any time if he is considered unfit for the work. Certain acts on the part of the recruiting agent are prohibited, such as the hiding of facts, exaggeration or false statement, forcing of employment and various acts injurious to good morals, with the view to safeguarding the liberty and chastity of the men or women workers about to be employed. If a worker desires to return to his home on account of circumstances for which the recruiting agent is responsible, or for any reason which necessitates his return, the ordinance holds either the employer or the recruiting agent responsible, and requires one of them to take the necessary measures to enable the worker to return to his home.

OLD AGE PENSIONS IN CANADA

Dominion-Provincial Conference to be Held Before Next Session of Parliament

THE special committee of the House of Commons, appointed in April, 1924, to make an enquiry into the question of an old age pension system for Canada, recommended in their final report to the House last year that the provincial governments should be asked to state what action, if any, they would be prepared to take in regard to the committee's main proposals. These proposals, which were stated in the issue of the GAZETTE for July, 1924, were to the effect that old age pensions should be provided, without contributions from the beneficiaries, for deserving indigent persons over 70 years of age, the cost of these pensions to be met by equal contributions from the Dominion and the respective provincial governments, the cost of administration also being borne by the provinces. The maximum rate of pension suggested was at \$20 per month, which would be reduced proportionately to private income or partial ability to earn a livelihood. It was intimated that under such a system there would be approximately 98,841 eligible pensioners, and that the federal government's portion of the total yearly expenditure would amount to \$11,860,920. This amount, however, would be reduced by any private income or partial earnings of the recipients.

Early in the parliamentary session of 1925 a special committee was appointed having the same reference as the special committee of 1924, namely, to make inquiry into an old age pension system for Canada. The second committee consisted of the following members of the House: Messrs. Fontaine, Irvine, Logan, McConica, Munro, Neill, Preston, Raymond, Robichaud, Sexsmith, Spence and St-Père. To this committee was referred the correspondence which had been held by the government since last session with the several provincial governments arising out of the proposals of the special committee last year.

On June 16, Mr. W. G. Raymond (Brantford), as chairman of the special committee, presented the following report in the House of Commons:—

Report of Special Committee

The Special Committee, appointed on the 1st of May last to make an inquiry into an old age pension system for Canada, to which was referred the correspondence arising from the proposal recommended to Parliament on the 1st of July, 1924, for co-operative action on the part of the Federal government and the governments of the several Provinces, has the honour to report as follows:—

Your Committee has given careful consideration to the aforesaid correspondence, and also to the corre-

spondence more recently received from Premiers and Ministers of several Provinces. Briefly, the views of the several Provincial governments are as follows:—

1. *New Brunswick*.—Under date of May 23rd, 1925, the Premier (Hon. Mr. Veniot) writes: "This Province is now considering the establishment of what is known as Widows' Pension, and we are not prepared to take any decision in the matter of an Old Age Pension. While I do not disapprove of the Old Age Pension, and feel that it would be a good thing, yet it would be impossible for me to commit the Province to any action in this matter at the present moment."

2. *Quebec*.—Under date of February 17th, 1925, the Minister of Public Works and Labour (Hon. Mr. Galipeault) writes: "On the occasion of the recent visit of the delegates of the Trades and Labour Congress of Canada, this question was taken up and, although it was not submitted in the regular way to the Cabinet, I understood from the remarks of my colleagues, that it could be no question for the Province of Quebec, considering the obligations actually imposed upon it, of adopting a law which would take care of the old age pensions in this Province."

3. *Nova Scotia*.—Under date of June 2nd, 1925, the Premier (Hon. Mr. Armstrong) writes: "In view of the importance of the subject-matter, and the lack of an opportunity to fully consider the same, I was instructed to advise you that without a further and better understanding of the subject-matter and without an opportunity to fully discuss it with your Committee, no action would be taken upon the matter at present."

4. *Prince Edward Island*.—Under date of May 22nd, 1925, the Premier (Hon. Mr. Stewart) writes: "In this Province, as you probably are aware, except in the towns, we have no municipal government, consequently all assistance to indigent and aged persons is furnished directly by the Provincial government, either in the Provincial Infirmary or by monthly contributions to private persons who become responsible for their support. I have read over your letter and the accompanying report with interest. I shall place the matter before my government at its next meeting and will then advise you of its decision."

5. *Ontario*.—Under date of 24th November, 1924, the Premier (Hon. Mr. Ferguson) writes: "I shall be glad to consider the matter."

6. *Manitoba*.—Under date of 25th February, 1925, the Attorney General (Hon. Mr. Craig) writes: "We are in the midst of our Session just now with the multiplicity of matters requiring immediate disposition. I shall, however, take up the matter with the Premier and the Minister of Public Welfare at the earliest opportunity."

7. *Saskatchewan*.—Under date of 19th November, 1924, the Minister of Labour and Industries (Hon. Mr. Gardiner) writes: "The Government of Saskatchewan is of opinion that an old age pension scheme for Canada can best be adopted by the Federal government alone. There would seem to be so much difficulty in the way of providing any scheme that would be suitable to all the nine provinces of Canada as to make it almost impossible, and it will be readily understood that if any number of the provinces were to remain out, it would be almost impossible to adopt any scheme that would not subject those provinces within the arrangement to considerable expense that should rightfully be borne by those outside the scheme. While we are disposed to think that an old age pension scheme should be undertaken, the difficulties in the way of the suggested scheme appear almost, if not entirely, insurmountable."

8. *Alberta*.—Under date of June 2nd, 1925, the Acting Premier (Hon. George Hoadley) writes: "This Government has reviewed the recommendations of the Committee and approve the general principle of old age pensions. We are not prepared, however, to accept the recommendations of the Committee. The three main objections are: (1) We believe that the Federal government should assume a larger share in the financing of an old age pension scheme as it is more a Federal obligation than a Provincial one; (2) We are not satisfied that a *non-contributing* scheme is the best one; and (3) There is no guarantee that the Federal government would continue for a definite time to carry out the mutual arrangements with respect to financing the scheme."

9. *British Columbia*.—Under date of February 5th, 1925, the Minister of Labour (Hon. Mr. Manson) writes: "This matter has been carefully considered by the Government and also by the Provincial Legislature at its last Session, and the consensus of opinion is that the matter of old age pensions is one entirely in the sphere of the Federal Parliament and this Government does not concur in the suggestion made by the Committee that a portion of the cost of such pensions be borne by the Provincial Crown."

In the resolution passed unanimously by the British Columbia Legislature on the 18th December, 1924, the following statement is noted: "State responsibility in the matter of the proper maintenance of aged citizens has been recognized by Great Britain, Australia, New Zealand, and a number of the nations of the continent of Europe."

In a letter dated March 5th, 1925, the Minister of Labour of the Province of British Columbia (Hon. Mr. Manson) writes:—

"I beg to say that the matter has had very serious consideration on the part of this Department and the opinion is confirmed that the matter of old age pensions is a subject for the consideration of the Federal and not the Provincial Parliament."

On June 2nd, 1925, the Premier of the Government of British Columbia (Hon. Mr. Oliver), writing to the Chairman of the Committee, Mr. Raymond, says: "Your explanation of how the proposed scheme was expected to work certainly tends towards a better understanding. Should the Parliament of Canada pass legislation along the lines suggested in your printed report of last year, I presume the question would then arise as to whether or not the Province would co-operate."

In view of the position taken by several of the Provinces and more particularly by Saskatchewan, Alberta and British Columbia, and having in mind what the British North America Act, under sections 91 and 92, defines, your Committee resolved to obtain an authoritative opinion from the Department of Justice in respect of the points thus raised, and on the 23rd of May last, the Deputy Minister of Justice replied as follows:—

"Referring to your letter of the 12th instant, asking to be advised with regard to the authority of Parliament to legislate on the subject of old age pensions, I may say that this subject does not fall specifically within any of the enumerated subjects given to the Dominion under section 91 of the British North America Act, but does in my judgment fall within the subject "Property and Civil Rights in the Province" committed to the provinces under section 92. I am of opinion, therefore, that the subject matter of pensions has been entrusted to the provincial legislatures rather than to Parliament. I do not mean to suggest that Parliament has not the power to legislate upon the subject so as to assist the provinces or to establish an independent voluntary scheme, provided that in either case the legislation does not trench upon the subject matter of property and civil rights in the province, as for example by obligating any province or person to contribute to the scheme."

"The enactment of such legislation would, however,

involve the assumption by the Dominion of obligations involving heavy expenditures with regard to a matter which does not fall specifically within the Dominion field of legislation."

RECOMMENDATIONS

Having given very careful consideration to the opinion submitted by the Department of Justice, and also to the respective views of the different provinces, your Committee have come to the following conclusions:—

Firstly, that if the Dominion Government were to proceed now with a scheme of old age pensions, it would have to be prepared to bear the entire expense, which would approximately amount to twenty-three million (\$23,000,000) dollars annually, according to the data contained in your Committee's investigations.

Secondly, that in view of the present financial conditions and heavy taxation of Canada, your Committee would not feel warranted at the present moment in recommending such a large additional expenditure, annually.

Thirdly, that this measure of social reform, in the opinion of your Committee, is very important, and

Fourthly, that since it is the opinion of the Department of Justice that the matter is one coming under the jurisdiction of the Provinces, although open to assistance from the Federal government, your Committee, therefore, strongly recommend:

1. That the Federal government arrange with the Premiers of the different Provinces for a conference to be held during the coming Recess of Parliament at which an old age pension system shall be given the fullest consideration with a view to securing co-operative action, and that the report of the said conference be laid on the Table at the next Session of Parliament for future consideration and action.

2. That the Chairman of your Committee, and one other of its members who would be familiar with the subject matter, be invited to attend the said conference.

3. That a copy of this report be forwarded to each Premier of the several Provinces.

On June 18, Mr. Raymond, in moving that the recommendations contained in the foregoing report be concurred in by the House, stated that the committee's proposals "involved no expenditure or responsibility further than the continuance of the idea of establishing in Canada an old age pension system, which the committee thought to be very desirable, and would like to see proceeded with. I do not think," he continued, "it is necessary now to go into the general question of old age pensions. I think we have arrived at that degree of advancement and civilization in this country when it is generally conceded that we are lacking in this matter, and that we should have an old age pension scheme in Canada. This government has taken the initial step and we hope the matter will be proceeded with and prosecuted until it arrives at a successful conclusion in a co-operative movement between the federal government and the provincial governments."

Mr. William Irvine (East Calgary) moved as an amendment "that this report be referred back to the committee with instructions to consider and report back on a purely federal scheme." The amendment was defeated on a division by 139 votes to 17, and Mr. Raymond's motion was then agreed to.

JUDGMENT OF THE SUPREME COURT OF CANADA REGARDING THE EIGHT HOUR DAY CONVENTION OF THE INTERNATIONAL LABOUR CONFERENCE

REFERENCE was made in the June issue of the LABOUR GAZETTE to the hearing in the Supreme Court of Canada on June 11 of a reference which had been made by Order in Council of the Dominion Government of certain questions as to the obligations of Canada arising under the Labour Part of the Treaties of Peace, and also to the legislative authority of the Dominion Parliament or of the Provincial legislatures to deal with a certain Draft Convention which had been adopted by the International Labour Conference (League of Nations) in 1919 limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week. The judgment of the Court was delivered on June 11, 1925, and was unanimous. In effect it is a confirmation of the view which was expressed by the Law Officers of the Crown and which was embodied in an Order in Council of the Dominion Government which was adopted in November, 1920.

Text of Judgment

The judgment of the Court was in the terms following:—

IN THE MATTER of a reference by His Excellency the Governor General in Council to the Supreme Court of Canada of certain questions relating to legislative jurisdiction over hours of labour.

The judgment of the Court—The Chief Justice and Duff, Mignault, Rinfret, and Magee JJ.—was delivered by

DUFF J.—

The first of the questions submitted concerns the general effect of one of the clauses in Article 405 of the Treaty of Versailles and the corresponding provision in the other treaties of peace. This article is one of those comprised in the Labour Part (Part 13) of the Treaties and it defines the undertaking entered into by each of the members respecting recommendations and draft conventions adopted by the general conference of representatives of the members of the League of Nations established as part of a permanent organization for the promotion of the objects set forth in the preamble to that part. The pertinent clause is in these words:—

Each of the members undertakes that it will, within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to ex-

ceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the Conference bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies, for the enactment or legislation or other action.

It seems very clear that the duty arising under this clause is not a duty to enact legislation or to promote legislation; it is an undertaking simply to bring the recommendation or draft convention before the competent authority.

No question is submitted as to the duty of the member arising under the succeeding clauses of the same article in the event of the competent authority or authorities giving its or their consent to the recommendation or draft convention; and upon this no opinion is expressed.

The second, third and fourth questions submitted relate to a particular draft convention; that, namely, adopted by the General Conference of the International Labour Organization of the League of Nations on the 29th of October, 1919, which has for its object the limiting of the hours of work in industrial undertakings as therein defined to eight hours in the day and forty-eight hours in the week.

Under the scheme of distribution of legislative authority in the British North America Act, legislative jurisdiction touching the subject matter of this convention is, subject to a qualification to be mentioned, primarily vested in the provinces. Under the head of jurisdiction numbered 13 in section 92, Property and Civil Rights, or under the sixteenth head, Local and Private Matters Within the Province, or under both heads, each of the provinces possesses authority to give the force of law in the province to provisions such as those contained in the draft convention. This general proposition is subject to this qualification, namely that as a rule a province has no authority to regulate the hours of employment of the servants of the Dominion Government.

It seems questionable whether government employees, in industrial undertakings carried on by the Government, such, for example, as ship-building, are within the scope of the convention. The point was not the subject

of argument before us, and concerning it no opinion is intended to be expressed.

It is necessary to observe, also, that as regards those parts of Canada which are not included within the limits of any province, the legislative authority in relation to civil rights generally, and to the subject matter of the convention in particular is the Dominion Parliament.

It is now settled that the Dominion, in virtue of its authority in respect of works and undertakings falling within its jurisdiction, by force of section 91, No. 29, and section 92, No. 10, has certain powers of regulation touching the employment of persons engaged on such works or undertakings. The effect of such legislation by the Dominion to execution of this power is that provincial authority in relation to the subject matter of such legislation is superseded, and remains inoperative so long as the Dominion legislation continues in force. There would appear to be no doubt that, as regards such undertakings—a Dominion railway, for example—the Dominion possesses authority to enact legislation in relation to the subjects dealt with in the draft convention. The only Dominion legislation on this subject to which our attention has been called is to be found in section 287 of the Railway Act of 1919, which confers authority on the Board of Railway Commissioners to make orders and regulations concerning the hours of duty of persons employed on railways subject to the jurisdiction of the Board, with a view to the safety of the public and of such employees. It is understood that no orders or regulations have been made in execution of this power; and in view of the fact that this enactment, creating this unexecuted power, appears to be the only Dominion legislation in existence on the subject matter of the draft convention, the primary authority of the province in relation to that subject matter remains, subject to the qualification mentioned, unimpaired and unrestricted.

It follows from what has been said that the draft convention ought to be brought before the Parliament of Canada as being the competent legislative authority for those parts of Canada not within the boundaries of any province; and if servants of the Dominion Government engaged in industrial undertakings as defined by the convention are within the scope of its provisions, then the Dominion Parliament is the competent authority also to give force of law to those provisions as applicable to such persons.

The convention should also be brought before the Lieutenant-Governor of each of the provinces for the purpose of enabling him to bring it to the attention of the Provincial Legislature as possessing, subject to the qualification mentioned, legislative jurisdiction within the province in relation to the subject matter of the convention.

The answers to the questions submitted are, therefore:—

(1) What is the nature of the obligation of the Dominion of Canada as a member of the International Labour Conference, under the provisions of the Labour Part (Part XIII) of the Treaty of Versailles and of the corresponding provisions of the other Treaties of Peace, with relation to such draft conventions and recommendations as may be from time to time adopted by the said Conference under the authority of and pursuant to the aforesaid provisions?

To the first question; the obligation is simply in the nature of an undertaking to bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

(2) Are the legislatures of the provinces the authorities within whose competence the subject-matter of the said draft convention (copy of which is herewith submitted in whole or in part lies and before whom such draft convention should be brought, under the provisions of Article 405 of the Treaty of Peace with Germany, for the enactment of legislation or other action?

To the second question: yes, in part.

(3) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the legislatures?

To the third question: the subject matter is generally within the competence of the legislatures of the provinces, but the authority vested in these legislatures does not enable them to give the force of law to provisions such as those contained in the draft convention in relation to servants of the Dominion Government, or to legislate for those parts of Canada which are not within the boundaries of a province.

(4) If the subject-matter of the said draft convention be, in part only, within the competence of the legislatures of the provinces, then in what particular or particulars, or to what extent, is the subject-matter of the draft convention within the competence of the Parliament of Canada?

To the fourth question: the Parliament of Canada has exclusive legislative authority in those parts of Canada not within the boundaries of any province, and also upon the subjects dealt with in the draft convention in relation to the servants of the Dominion Government.

ORGANIZATION IN INDUSTRY, COMMERCE AND THE PROFESSIONS IN CANADA

Fourth Annual Report published by the Department of Labour of Canada

THE Department of Labour has published its fourth Annual Report on Organization in Industry, Commerce and Professions in Canada. The report contains the names of two new associations of manufacturers, namely, the Canadian Pulpwood Association and the Cloak Manufacturers' Protective Association, while in the same group the following three bodies were dissolved during the past year: Clothing Manufacturers' Association of Montreal, United Clothing Contractors' Association (Montreal), and the Western Ontario Clay Workers' Association. Two of the association of bakers which were last year included as main organizations are in the present report recorded as branches of the Bread and Cake Manufacturers of Canada. Among the organizations of employers in other groups which have passed out of existence are builders' exchanges in Sydney and Stratford, societies of plumbers in Brantford and Hamilton, two provincial electrical contractors' associations in Quebec, the Northern Alberta Coal Operators' Association and the Master Barbers' Association of Ottawa.

The associations whose names are included in the report total 1,325, an increase of 97 over the number recorded in the previous volume. There are 733 main organizations, an increase of 30; the branch associations number 592, an increase of 67, the aggregate reported membership of all classes of organizations being 1,033,131, an increase of 171,198, as compared with 861,933 comprising the membership of the 703 main and 525 branch associations included in the third volume. The membership figures in some instances apply to firms, but generally they represent individuals.

The report is arranged on the same lines as preceding volumes and contains the names of associations of which notice has come to the attention of the department since the date of the previous report. The objects of the various organizations are in the main to advance and protect the interests of their members, and in some instances to promote legislation. Many of the associations are Dominion-wide; others are provincial in scope, and some are purely local bodies. The bulk of the organizations whose names are recorded are wholly Canadian, but some are affiliated with kindred organizations with headquarters in the United States. Among the latter are those of the (1) master painters, (2) plasterers, (3) cut

stone contractors, (4) employing commercial printers, newspaper and directory publishers, (5) electrical dealers, (6) hotel keepers, (7) theatre managers. The Canadian Retail Coal Dealers' Association, one of two such bodies known to exist in Canada, as well as the organized photographers of Vancouver and Victoria, are identified with United States organizations. Among the associations in the technical and scientific group will be found a number of international organizations, the names of which are given a place, as many residents of the Dominion are connected with them.

The various associations have been arranged in the following groups, and particulars are given, so far as supplied, showing the date when they were formed, their membership, the objects of the organizations and the names and addresses of the chief executive officers.: 1—Manufacturing; 2—Building and Construction; 3—Mining; 4—Transportation and Communication; 5—Printing; 6—Laundering Cleaning, Repairing, etc.; 7—Personal Service and Amusement; 8—General Manufacturers and Employers; 9—Financial; 10—Agriculture; 11—Dairying; 12—Horse, Live Stock, Sheep, Breeders, etc.; 13—Co-operative Societies; 14—Wholesale Merchants; 15—Retail Merchants; 16—Real Estate Dealers; 17—Professional; 18—Technical and Scientific; 19—Insurance; 20—Funeral Service.

The first eight of these divisions comprising 331 associations with 23,581 members are connected with industries where the employment of labour is an important factor, and in some cases the employers' organizations negotiate agreements with the corresponding trade unions of wage-earners. In the remaining groups the employment of labour is often only incidental, and with the exception of the personal service and amusement and the retail merchants' groups there is no corresponding body of organized employees.

The report forms a useful directory of employers' organizations in Canada, and may serve as a companion volume to the Department's Annual Report on Labour Organizations in Canada, the last issue of which was reviewed in the LABOUR GAZETTE for May, 1925. Copies may be obtained on application to the Department of Labour, Ottawa, price 20 cents.

COMPENSATION FOR INDUSTRIAL DISEASES IN CANADA AND OTHER COUNTRIES

WITHIN the past half century there has been a tendency to treat diseases due to the nature of the work of employees with the same consideration as accidents arising out of, and in the course of the workmen's employment. (A comparative analysis of existing national laws on this subject, published recently by the International Labour Office, was noted in the last issue of the *LABOUR GAZETTE*). Switzerland was the first country to apply the principle of occupational risk to disease by embodying in the Factory Law of 1877 a clause authorizing the Federal Council to enumerate the industries, employment in which suffices both exclusively and essentially to engender certain serious diseases to which responsibility as defined by accident would extend. Under the laws now governing, accident insurance is compulsory and applies automatically to all workers employed in Switzerland in establishments coming within the scope of the law, the terms of which cover the risks of both occupational and non-occupational accidents and those of occupational diseases. Eighty-two substances are included in a scheduled list under the Act which are liable to give rise to serious disease. Infectious diseases (anthrax, glanders, etc.) which were, however, included in a previous list, and diseases caused by physical agents such as compressed air are no longer included.

In Great Britain the principle of compensation for diseases arising out of, and in the course of employment was first introduced in the Workmen's Compensation Act of 1906, the diseases scheduled in the Act being anthrax, lead poisoning or its sequelae, mercury poisoning or its sequelae, phosphorous poisoning or its sequelae, arsenic poisoning or its sequelae, and ankylostomiasis. Thirty-two diseases or injuries are now contained in the list under the British Act. The British law confines itself to a series of diseases or injuries to which workmen manufacturing or handling certain substances are liable, but does not specify particularly the actual disease which may result from such processes. For instance, the first column of the schedule enumerates poisoning by lead, and poisoning by mercury and their sequelae, and specified in the second column that such poisoning is suffered by workers engaged on work involving the use of lead, its mixtures or compounds, mercury, its mixtures or compounds, etc. Similarly, the list gives anthrax when contracted by a worker handling wool, silk, bristles, hides and skins;

ankylostomiasis when contracted by a colliery worker, etc. The French law, on the other hand, sets forth in the first column of the schedule the clinical aspect of lead or mercury poisoning for which compensation is provided and gives in a second column a list of the industries liable to bring about these forms of poisoning. The French law provides compensation for cachexia, paralysis, rheumatism, etc., when of saturnine origin and when contracted by workmen employed in such occupations as the metallurgy or refining of lead, tin plating, the manufacture of salts of lead, potteries and chinaware factories using lead glazes, etc. Compensation is also given for stomatitis, trembling, paralysis, when of mercurial origin in the case of work in mercury distilleries, mercury gilding and silvering, the manufacture of mercurial salts, etc. Consequently, any case of poisoning not showing symptoms included in the list, or a disease mentioned in the first column, but occurring in an industry not comprised in the second column, does not give a claim to compensation. Other countries providing legislation on the lines of accident insurance are: the British Dominions—Australia, New Zealand, South Africa, India, Canada—France, Spain, Greece, Italy, Portugal, Serb-Croat-Slovene Kingdom, United States, Mexico, Ecuador, Argentina, Brazil and Japan. An article dealing with the subject of industrial diseases in the United Kingdom, Canada, United States and France was published in the *LABOUR GAZETTE* for March, 1920, on page 304.

Canada follows the British system in regard to compensation for industrial diseases. In Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, and Ontario such diseases are compensable in the same way as accidents, in most cases the diseases covered being specified in the various Acts. Ontario was the first province in the Dominion to embody industrial diseases in its workmen's compensation law. The Ontario Workmen's Compensation Act of 1914 adopted from the British Act of 1906 the original schedule of six diseases, anthrax, lead poisoning or its sequelae, mercury poisoning or its sequelae, phosphorus poisoning or its sequelae, arsenic poisoning or its sequelae, and ankylostomiasis. The British schedule was also followed in the Nova Scotia Act of 1915, the Manitoba and British Columbia Acts of 1916, and the Alberta Act of 1918. The Alberta Act also included miners' phthisis in its list. Miners' phthisis

was added to the Ontario list in 1917, and stone workers' or grinders' phthisis in the present year (LABOUR GAZETTE, February, 1925, page 145). In 1919 the Nova Scotia Act was amended to include subcutaneous cellulitis of the hand (beat hand) subcutaneous cellulitis over the patella (beat knee) and acute bursitis over the elbow (beat elbow). A report giving the results of an inquiry undertaken by the British Medical Research Council regarding these diseases was given in the LABOUR GAZETTE for February, 1925, page 169. At the recent session of the Alberta Legislature frost bite was added to the list of compensable disabilities. Sulphur poisoning in coal mining was added to the British Columbia list in 1922. In the New Brunswick Act of 1918 no diseases were specified, but provision was made for compensation for any industrial disease due to the nature of the employment in which a work-

man was engaged within the twelve months prior to the date of his disablement. The Workmen's Compensation Board of New Brunswick, however, by regulation in force January 1, 1920, declared the following diseases to be industrial diseases within the meaning of the Act: anthrax, lead poisoning or its sequelae, mercury poisoning or its sequelae, phosphorus poisoning or its sequelae, arsenic poisoning or its sequelae, sulphur poisoning or its sequelae, ammonia poisoning or its sequelae, carbon bisulphide or its sequelae, carbonic acid gas, ankylostomiasis, glanders, compressed air illness, infection by handling sugar.

In the provinces of Saskatchewan, Quebec and Prince Edward Island compensation for industrial diseases is not provided. The following table shows by provinces the industrial diseases compensated in each province.

INDUSTRIAL DISEASES COMPENSABLE IN THE VARIOUS PROVINCES OF CANADA

Description of Disease or Injury	Description of Process	Provinces
Anthrax.....	Handling of wool, hair, bristles, hides and skins..	Alberta, British Columbia, Manitoba, Nova Scotia, New Brunswick, Ontario.
Ankylostomiasis.....	Mining.....	
Lead poisoning or its sequelae.....	Any process involving the use of lead or its preparations or compounds.	
Mercury poisoning or its sequelae.....	Any process involving the use of mercury or its preparations or compounds.	Ontario. New Brunswick British Columbia. New Brunswick.
Phosphorous poisoning or its sequelae.....	Any process involving the use of phosphorus or its preparations or compounds.	
Arsenic poisoning or its sequelae.....	Any process involving the use of arsenic or its preparations or compounds.	
Benzol poisoning.....	Any process involving the use of benzol.....	New Brunswick British Columbia. New Brunswick.
Sulphur poisoning or its sequelae.....	Any process involving the use of sulphur or its preparations or compounds.	
Ammonia poisoning or its sequelae.....	Any process involving the use of ammonia or its preparations or compounds.	
Carbon bisulphide or its sequelae.....	Any process involving the use of carbon bisulphide.	New Brunswick.
Carbonic acid gas.....	Any process involving the use of carbonic acid gas.	New Brunswick.
Compressed air illness.....	Any process carried on in compressed air.....	New Brunswick.
Glanders.....	Care of any equine animal suffering from glanders; handling the carcass of any such animal.	New Brunswick.
Infection by handling sugar.....	Any process involving the handling of sugar.....	New Brunswick.
Miners' phthisis.....	Mining.....	Alberta, Ontario.
Subcutaneous cellulitis of the hand (beat hand)	Mining.....	Nova Scotia.
Subcutaneous cellulitis over the patella (beat knee).	Mining.....	
Acute bursitis over elbow.....	Mining.....	
Stone workers' or grinders' phthisis	Quarrying, cutting, crushing, grinding, or polishing of stone, or grinding or polishing of metal.	Ontario.
Frost bite.....	Sustained in the course of employment.....	Alberta.

Voluntary Arbitration Recommended

The International Commercial Conference, held at Rome last April, adopted the following resolution in favour of optional, as against compulsory arbitration in trade disputes:—

The International Parliamentary Commercial Conference, without wishing in any way to limit the right to strike or lockout, or the right of organization which is admitted both for workers and for employers, and subject to the special conditions obtaining in each country, is of opinion that it is in the general interest to reduce to a minimum the duration of industrial

disputes and the number and extent of the voluntary unemployment to which they give rise. The Conference considers that it is desirable to recommend the practice of conciliation and of optional arbitration in the event of disputes between employers and employed. The Conference draws the attention of the various States to this question, and recommends that the International Labour Office should be asked to consider the problem from the scientific and practical point of view, in order to submit the question to all countries which have adhered to the League of Nations.

MINIMUM WAGES FOR WOMEN IN MANITOBA

New Order Governing Beauty Parlours and Hairdressing Establishments

THE Minimum Wage Board of Manitoba issued in June a new order governing the occupation of female employees in all departments of beauty parlours and hairdressing establishments, including all schools and colleges teaching these trades. This order makes more definite provisions in regard to working hours than were contained in previous orders by the Board, providing for a 48 hours week with one half-holiday in each week. It also includes the provision that wages are to be paid weekly, within three days after the wages have been earned, and that protection is to be given the employees against occupational diseases. The rules governing teaching institutions also form a new feature.

The conditions of labour that are required by the new order are as in previous orders, provisions being made in regard to cleanliness, supply of drinking water, proper lighting and ventilation (400 cubic feet of air for each employee), toilet rooms and wash basins, temperature (each room to contain a thermometer, the temperature to be from 60 to 75 degrees, except when warmer outside). In regard to health and injuries the order provides that "all machinery and danger points shall be protected as far as possible by the best safety devices known. All protection possible against occupational diseases shall be provided. Each establishment shall keep a First-Aid kit to be approved by the Bureau of Labour, and at least one reliable member of the working force shall be trained in its use. A couch or stretcher shall be provided for emergencies, and where no dressing room or similar apartment exists, a screen shall be provided."

The sections of the order which refer to hours, wages, learners, board and lodging, and permits of exemption, are as follows:—

HOURS

(1) Hours of Labour.—The hours of labour shall be not more than ten (10) hours in any day nor more than forty-eight (48) in any week. These hours shall be so arranged that each employee shall receive one half-holiday each week. No employee shall work on Sundays nor between 7 p.m. and 8 a.m., except on Saturdays or the evening before a Statutory holiday, when employees may work until 9 p.m. There shall be a period of not less than eleven (11) hours between the close of one day's work and the beginning of the next.

(2) Overtime.—Overtime may be worked only on permit from the Bureau of Labour, not oftener for any employee than 12 days in one year. No overtime to

exceed three (3) hours in any day nor six (6) in any week. There shall be extra pay at not less than the regular rate for all overtime worked.

(3) Lunch Hour.—At least one hour shall be allowed for lunch.

(4) Delays.—An employee waiting on the premises as required by the employee shall be paid for the time thus spent.

WAGES

(1) Method of Payment.—Wages shall be paid weekly, and after each week's wages have been earned they shall be paid within three (3) days.

(2) Notice to be Given.—After four weeks' employment one week's notice shall be required on the part of the employer in dismissing an employee, and on the part of the employee on leaving employment, except in the case of flagrant insubordination on the part of the employee, or flagrantly unjust treatment on the part of the employer.

(3) Minimum Wage.—Experienced employees shall be paid a weekly wage of not less than twelve (\$12) dollars.

(4) Statutory Holidays.—No reduction shall be made from the Minimum Wage for statutory holidays.

LEARNERS

(1) There shall be a probationary period of three months for all learners in this industry.

(2) No inexperienced female, after passing the probationary period, shall be paid wages at a rate less than \$8 per week for the first six months after entering the industry, \$9.50 per week for the second six months, and \$11.00 per week for the third six months, after which period of eighteen months she shall receive not less than the minimum wage of \$12 per week. Girls under 16 years of age shall not be employed.

(3) Certificate.—After a learner has served eighteen months and passed an examination before a qualified Board of Examiners, she shall be given a certificate of standing.

(4) Schools and Colleges operating as such shall furnish to the Board a list of the subjects taught, the length of each course, and the fee charged. Also a copy of the diploma issued to each graduate.

(5) Registration.—A register shall be kept showing the name and address of each student, the date of registration and the length of time in attendance. When a student does not finish the course the reason for leaving shall be stated in the register. Register shall be open to inspectors of the board at all times.

BOARD, LODGING, ETC.

Where lodging is furnished by the employer, there shall be deducted from the wage-rate a sum which shall not be more than a rate of two dollars (\$2) per week, and for board at no more than a rate of four and a half (\$4.50) per week and for both lodging and board at no more than a rate of six dollars (\$6) per week.

PERMITS OF EXEMPTION

The Board may issue a permit upon application therefor to any beauty parlour or hairdressing establishment, granting modification of or exemption from these regulations. Such permits will be issued only in case of exceptional or emergent conditions arising.

ACCIDENTS IN ONTARIO FACTORIES DURING THE FIRST HALF OF 1925

ACCORDING to the report of the Ontario Factory Inspector there were 1,835 persons injured, of whom 14 were killed, in the factories of Ontario during the first six months of 1925. The cases are grouped according to the nature of the injury as follows: Injuries to fingers, 382 cases; to hands, 158; to thumbs, 123; to eyes, 158; to head, 42, to face 28; to feet, 136; to toes 123; to back, 68; to legs, 68; multiple injuries to the lower extremity, 180 cases. Falling substances were responsible for 307 injuries, of which five resulted in death. Falls cause 191 injuries including one death. Being jammed between articles caused 177 injuries including one death; sprains and strains caused 140; burns and scalds 104; hand tools, 79; cranes and derricks, 8, including 1 death; elevators, 19, including one death; electricity, 9; engines and cars, 12, including

one death; explosions, 6; flying missiles, 61, including one death; and foreign substances in eyes, 34. Infected wounds resulted in 125 cases. There were 540 injuries including three deaths from machinery, listed as due to the following machines and connections: rolls, 22; gears, cogs, sprockets, 20; belts, pulleys, shaftings, 29, including the three deaths; saws, 31; planers, 9; drills, 10; milling machinery, 5; shears, 5; emery wheels, 35; presses, 30; punches, 6; dies, 12; barker, 1; calendars, 4; cutter knives, 3; conveyors, 4; hammers, 10; jointers, 3; loom, 1; centrifugal machinery, 1; paper machinery, 14; spinning machinery, 12; winders, 3; grinding wheels, 13; lathes, 3; machinery connections, 20; wiredrawing, etc., 2; trucking, 31; other machinery, 55; and miscellaneous causes, 146.

ANNUAL CENSUS OF INDUSTRY OF CANADA

THE Dominion Bureau of Statistics under the Statistics Act of 1918, issues an annual industrial census, including statistics of fisheries, mines, forestry and general manufactures in Canada. This annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

Manufacture of the Non-Metallic Minerals 1919-1923

The Bureau has recently issued a report on the manufacture of non-metallic minerals in Canada covering the five-year period, 1919-1923. This industry is classified in nine main groups as follows:—aerated waters; asbestos and allied products; cement products; sand-lime brick; coke and by-products; glass; illuminating and fuel gas; monumental and ornamental stone; petroleum products; miscellaneous manufactured non-metallic mineral products, which includes artificial abrasives; abrasive products; artificial graphite and electrodes; gypsum products; and the products of mica trimming shops. The report also contains statistics of some primary industries that are ordinarily regarded as manufacturing enterprises, including clay products, clay sewer pipe, firebrick and fireclay products, stoneware and pottery, cement, lime, salt.

Most of the industries in the non-metallic mineral group reached the peak of their production in 1920. The depleted condition of the world's markets for many products immediately following the war, caused a great increase in production, and with plants operating at full capacity, the output, after two years, more than met the current demand. The surplus thus accumulated at the close of 1920 had a depressing effect on production in the following year.

In the year 1919 the number of plants reporting was 704; this increased to 794 in 1920, dropped back to 764 in 1921 and then rose again to 781 in 1922 and 794 in 1923. Of this latter number 36 were located in Nova Scotia, 3 in Prince Edward Island, 30 in New Brunswick, 175 in Quebec, 434 in Ontario, 31 in Manitoba, 22 in Saskatchewan, 25 in Alberta and 38 in British Columbia. The total capital invested in these plants was \$121,167,497 in 1919; four years later it totalled \$166,786,211; the figure for 1920 was \$142,173,061; for 1921, \$146,855,434, and for 1922, \$161,063,081.

The total number of salaried employees and wage-earners was 15,353 in 1919; this increased to 19,343 in 1920, fell away to 15,413 in 1921, and to 15,130 in 1922, and in 1923 numbered 17,936 persons. The amount of money paid out for salaries and wages amounted to \$16,859,231 in 1919, increased to \$23,185,110 in 1920, and then declined to \$19,801,091 in 1921 and to \$18,738,055 in 1922 and rose to \$20,171,649 in 1923.

The value of the raw material increased from \$53,055,623 in 1919 to \$75,846,140 in 1920, fell to \$115,255,794 in 1921 and \$109,637,454 in 1922, and rose to \$113,453,012 in 1923. The value of the products increased from \$93,266,612 in 1919 to \$129,009,252 in 1920, decreased

to \$115,255,794 in 1921 and to \$109,637,454 in 1922, and rose again to \$113,453,012 in 1923.

The following table shows the number of employees and the total salaries and wages paid in each of the groups during each of the five years under review:—

	No. of em- ployees	Salaries and wages	No. of em- ployees	Salaries and wages	No. of em- ployees	Salaries and wages	No. of em- ployees	Salaires and wages	No. of em- ployees	Salaries and wages
	1919	1919	1920	1920	1921	1921	1922	1922	1923	1923
		\$		\$		\$		\$		\$
Petroleum products.....	3,919	5,301,879	4,153	6,551,826	4,014	6,182,514	3,555	5,492,683	4,257	5,648,320
Glass.....	2,999	3,163,148	4,039	4,867,520	3,097	3,621,768	2,984	3,369,854	3,350	3,778,802
Illuminating and fuel gas...	2,521	2,683,679	3,114	3,679,235	2,818	3,984,976	3,107	3,974,705	3,021	3,801,832
Aerated waters.....	2,036	1,575,339	1,913	2,079,421	1,932	1,811,983	1,537	1,803,364	1,724	1,843,531
Monumental and orna- mental stone.....	888	1,166,597	1,166	1,688,242	1,207	1,652,837	1,273	1,809,444	1,278	1,842,963
Coke and by-products.....	910	1,631,268	875	1,696,088	647	1,222,789	533	716,893	598	842,376
Cement products and sand										
Fire brick.....	483	483,094	580	741,385	664	639,658	614	659,973	646	743,993
Asbestos and allied pro- ducts.....	114	158,957	201	248,214	132	273,522	156	189,059	145	176,986
Miscellaneous non-metallic mineral products.....	1,483	695,270	3,302	1,633,179	902	411,044	1,371	722,080	2,917	1,492,846

The number of plants reporting in the primary mineral products group in 1919 was 950; in 1920 there were 1,103; in 1921, 1,075; in 1922, 1,095 and in 1923, 1,091. The total capital invested during these years was \$191,650,827, \$222,032,986, \$229,597,829, \$238,691,461, and \$243,519,222, respectively. The total number of salaried employees and wage earners was 21,472 in 1919; 27,234 in 1920; 23,824 in 1921; 23,010 in 1922, and 26,067 in 1923. The amount of money paid out for salaries and wages amounted to \$23,285,543 in 1919; \$33,898,979 in 1920; \$28,374,655 in 1921; \$27,217,917 in 1922, and \$29,338,046 in 1923. The net value of the products in each of the five years from 1919 to 1923 was \$114,670,203, \$159,820,506, \$142,757,179, \$141,288,421, and \$143,976,560, respectively.

Clay Products.—The brick and tile products had a capital of 24.8 million dollars in 1923, when 204 plants were operating. They employed 3,954 people, who received salaries and wages amounting to \$4,045,487. In 1922, there were 216 plants operating and although the capital employed was about one million dollars less than in 1923, the products manufactured amounted to about \$700,000 more. The number of persons employed was 3,904, and the amount paid in salaries and wages \$23,821,180. In 1921 returns were received from 202 plants, the capital invested was \$21,138,115, the average number of employees engaged 3,597 and the amount paid in salaries and wages \$2,780,204. The clay sewer pipe industry showed no great change in the years 1921, 1922 and 1923. Five plants operated with a capital of \$3,000,000. They employed an average of about 450 people,

who received slightly over half a million dollars in salaries and wages. The value of the products was about 1.5 millions. In the fire brick and fire clay industry, 6 plants operated in 1923, as against 5 in 1922, and 7 in 1921. About 1.78 million dollars was invested in the industry, and on an average 200 hands were employed, to whom over a quarter of a million dollars was paid. The value of the products was slightly over \$600,000. There were four plants manufacturing stoneware and pottery, with a capitalization of about \$300,000, and slightly more than 100 employees who received wages and salaries averaging about \$116,000 for the three years.

Structural Materials.—There were 10 plants making cement in 1923 as compared with 11 in 1922 and 14 in 1921. The total capital employed in the respective years was 38 million dollars, 41 million dollars, and 49 million dollars. In 1923, there were 1,842 people employed who received salaries and wages to the amount of 2.5 million dollars. The value of the products reported was slightly over 15 million dollars in each year. In the manufacture of lime 66 plants were operating in 1921 and 62 in 1922. The capital employed was in the neighbourhood of \$5,000,000 in both years. In 1921, the average number of employees was 931 and they were paid \$949,966. In 1922 1,110 people were on the payroll, receiving \$1,013,486. In 1923 with 56 plants operating the capital employed was \$6,050,954, the number of persons on the payroll was 1,197 and the amount paid in salaries and wages \$1,191,416. The value of the product in 1923 was \$3,266,608.

Salt.—In the salt industry 7 plants operated in 1919, 9 in 1920, 13 in 1921, 11 in 1922, and 12 in 1923. The capital employed was \$2,267,708 for 1921, \$2,205,184 for 1922, \$2,406,992 for 1923, and the value of the products in each of these years was \$1,673,685, \$1,628,323, and \$1,713,516 respectively. The number of salaried employees and wage-earners was 330 in 1921, 371 in 1922 and 368 in 1923 and the amounts paid for salaries and wages was \$411,832 for 1921, \$432,261 for 1922 and \$412,597 for 1923.

Iron and Steel Industry, 1920-1924

According to a preliminary statement issued by the Bureau, there were 1,004 firms in Canada manufacturing iron and steel and their products in 1924. The value of the products amounted to \$368,476,650, showing a net amount added by manufacture of \$173,346,947. These industries had a total capital investment of \$535,539,833. They employed 78,240 persons, and paid \$99,613,638 in salaries and wages. Lessened activity was general throughout the industries in the group. The tonnage production of pig iron and ferro-alloys was about 32 per cent lower than in 1923, most of the output being used by the producer in further processes; steel and rolled products fell off accordingly; castings and forgings decreased 17 per cent in value, as did also the sales values of boilers and engines; automobiles produced dropped 10 per cent in number, largely due to excess output in 1923; auto parts and accessories fell off 29 per cent in value; railway rolling stock, 34 per cent; wire and wire goods, 26 per cent; hardware and tools, 28 per cent; and iron and steel products not elsewhere specified about 13 per cent. Production of agricultural implements was fairly well maintained, the total value of the output being only about 5 per cent less than in 1923; the bicycle industry sales increased 12 per cent, and the production of industrial machinery and sheet metal products remained at about the level of 1923.

The report contains a table showing the principal statistics of the industry during the five-year period 1920 to 1924, divided into

fourteen sections, namely:—pig iron and ferro-alloys, the steel and rolled products, the castings and forgings, boilers and engines, agricultural implements, machinery, automobiles, auto parts and accessories, bicycles, railway rolling stock, wire and wire goods, sheet metal products, hardware and tools, and iron and steel products, not elsewhere specified. Most of these groups showed a considerable falling off in number of persons employed. In the sheet metal products group, however, there was an increase in the number of persons employed from 6,366 in 1920 to 6,518 in 1924. The greatest falling off was shown in the steel and rolled products group, which employed 12,944 persons in 1920 and 4,663 in 1924. Included in the former figure, however, were the employees in the pig iron and ferro-alloys which had 652 employees in 1921 and 610 in 1924. In the castings and forgings group, where there was employed the greatest number of persons of any of the groups, there was a falling off of from 22,053 persons in 1920 to 17,187 in 1924. In the agricultural implements group the falling off was from 11,120 persons in 1920 to 7,125 persons in 1924, and in the railway rolling stock group of from 14,722 persons in 1920 to 10,358 persons in 1924. The machinery group showed a falling off from 9,438 persons in 1920 to 7,947 persons in 1924, and the automobile group of from 10,455 persons to 9,270. In the automobile group there was included in 1920 the employees making auto parts and accessories which numbered 2,232 in 1921, 3,173 in 1922, 3,705 in 1923 and 2,551 in 1924, and also employees engaged in the making of bicycles where there was an increase in the number employed of from 252 in 1921 to 458 in 1924, the figure for 1923, however, being 496. In the wire and wire goods group there was a falling off in the number of persons employed from 3,420 in 1920 to 2,873 in 1924; in the hardware and tools group of from 5,557 in 1920 to 4,496 in 1924, and in iron and steel products not elsewhere specified of from 2,511 in 1920 to 2,410 in 1924. The following table shows statistics of the entire industry during the five-year period:—

Year	No. of plants	Capital employed	Average number of employees	Salaries and wages	Value of products
		\$		\$	\$
1920.....	1,475	642,904,322	102,661	132,885,132	640,233,785
1921.....	1,135	575,680,424	77,099	98,906,608	382,398,084
1922.....	1,046	526,109,953	75,334	91,632,088	333,569,814
1923.....	1,000	552,272,800	88,071	115,453,809	465,959,547
1924.....	1,004	535,539,833	78,240	99,613,638	368,476,650

Chemical and Allied Products, 1920 to 1924

A preliminary statement published by the Bureau of the chemical and allied products industry in Canada shows a decline in production from \$111,244,156 in 1923 to \$107,536,335 in 1924. The coal tar distillation industry, the manufacture of heavy chemicals and the production of medicinal and pharmaceutical preparations showed improvement in 1924; the paint and varnish industry, the manufacture of inks, dyes and colours, the wood distillation industry and the numerous small plants producing miscellaneous chemical products held their standing fairly well in comparison with the previous year; the explosives, ammunition, fireworks and matches industry and the soaps, washing compounds and toilet preparations industry showed slightly lower outputs. There were 462 plants engaged in the entire group in 1924. These plants employed 14,388 men to whom \$18,259,805 was paid in salaries and wages. Ontario had 248 chemical plants which produced 58.5 million dollars worth of products in the year and Quebec had 130 plants with an out-

put valued at 37.2 million dollars. Manitoba, British Columbia, Nova Scotia, New Brunswick, Alberta and Saskatchewan followed in the order named.

The acids, alkalies, salts and compressed gases group employed the greatest number of persons with 3,479 in 1920, 1,814 in 1921, 2,189 in 1922, 2,788 in 1923 and 2,453 in 1924. The medicinal and pharmaceutical preparations group has 2,838 in 1920, 2,230 in 1921, 2,302 in 1922, 2,271 in 1923 and 2,301 in 1924. The explosives, ammunition, fireworks and matches group had 2,631 in 1920, 1,771 in 1921, 2,123 in 1922, 2,290 in 1923, and 2,352 in 1924. The paints, pigments and varnishes group employed 2,568 in 1920, 2,231 in 1921, 2,451 in 1922, and 2,591 in 1923, and 2,523 in 1924. The soap, washing compounds and toilet preparations employed 1,996 in 1920, 1,871 in 1921, 1,873 in 1922, 2,082 in 1923 and 1,928 in 1924. In the remaining groups less than 500 persons were employed during 1924. The following table gives some of the principal statistics of the entire industry during the five-year period:—

Year	No. of plants	Capital employed \$	No. of employees	Salaries and wages \$	Value of products \$
1920.....	457	118,840,897	17,283	21,736,132	124,545,772
1921.....	469	118,705,489	12,669	16,279,589	88,901,547
1922.....	469	118,025,483	14,084	16,770,803	95,944,185
1923.....	475	126,537,481	15,149	18,433,679	111,244,156
1924.....	462	124,283,078	14,388	18,259,805	107,536,335

The Fruit and Vegetable Packing Industry

Four separate sections are dealt with in the report on the fruit and vegetable packing and allied industries in Canada for the calendar year 1923, namely (1) fruit and vegetables, canned; (2) fruit and vegetables, dried and evaporated; (3) fruits, preserved; and (4) vinegar, cider, pickles, sauces and relishes. The only section showing an increase in the value of production was the latter section, where the increase amounted to \$238,525, whilst the other three sections showed a total decrease in value of \$2,832,988. The number of plants operating in the entire industry in 1923 was 252, as compared with 296 in the previous year. About 70 per cent of the active plants were situated in the province of Ontario. The total value of the products manufactured in 1923 was \$20,901,322 as against \$23,495,785 in 1922. Of this amount, \$12,018,704 was paid for materials in 1923 and \$13,512,518 in 1922. The capital investment fell from \$24,077,358 in 1922 to \$23,106,580 in 1923. There was also a fall in the number of employees of all classes and in the salary and wage payments

in 1923 as compared with the previous year; salaried employees showed a decrease from 678 (532 male and 146 female) to 644 (499 male and 145 female) and their earnings from \$1,005,886 to \$974,584, while the number of employees on wages fell from 3,826 to 3,675 and their wages from \$2,417,014 to \$2,286,395. There was also a decrease in the number of outside piece-workers employed from 725 to 376 and in their earnings of from \$43,649 to \$15,107.

In the fruit and vegetable canning section, salaried employees numbered 195 males and 60 females with an aggregate salary payroll of \$339,495 which represented an average salary per employee of \$1,331. For those working on wages the males numbered 1,021 and the females 1,007 with a total wage payroll amounting to \$1,108,634 or an average per employee in this seasonal industry of \$546. More than 70 per cent of the total number employed in this industry and 75 per cent of the payments for salaries and wages are accredited to the province of Ontario; British Columbia is next with about 17 per cent of the employees and

20 per cent of the payments for salaries and wages. The months of maximum and minimum employment were respectively September and January. Full time operations of plants totalled 10,713 days and part time operations 3,848 days, a total operating time of 14,561 days, or an average of 141 per plant. On the other hand, plants were idle for 16,751 days, or an average of 163 days per plant. The hours of labour performed by employees averaged 5.77 per day and 58.21 per week.

In the section dealing with dried and evaporated fruits and vegetables 111 persons were employed of whom 49 were males and 62 females; 6 of these were superintendents and managers, 3 were clerks, etc., and 102 were wage earners. The total amount paid in salaries and wages in this industry was \$51,875. Full time operation of plants totalled 1,319 days and part time 79 days, and the time idle 7,722 days, or an average of 43.97, 2.63 and 257.40 respectively per plant. The hours worked by employees per day or shift averaged 9.50 and per week, 56.93.

In the preserved fruit section there were 1,195 persons employed of whom 471 were males and 724 were females. The salaries and wages to these employees totalled \$767,785. Salaried employees numbering 26 received for their services \$68,213, general superintendents and managers numbering 34 received \$79,033, technical experts, engineers, accountants, etc., numbering 14 received \$16,145, clerks, stenographers and other salaried employees numbering 113 received \$138,917, wage earners numbering 746 received \$459,384, and outside piece workers numbering 262 received \$6,093. Full time operation of plants totalled 10,553 days and part time 1,454 days or a total operating time of 12,007 days, an average per plant of 245 days. The time during which plants were idle totalled 2,889 days or an average per plant of 59 days.

In the manufacture of vinegar, cider, pickles, sauces and relishes, 70 firms were engaged, these employing 193 salaried employees (155 male, 38 female) who were paid for their services \$328,699, and 799 employees on wages

(514 male and 285 female) who were paid \$670,584. The maximum of employment was reached in September with a total of 1,267 persons, the minimum in January when it fell to 571. The seasonal nature of the industry is indicated by the time that plants were idle during the year, being more than one-third of the total working time. The average of days in operation, whether on full or part time, was 200.87 and the days idle numbered 103.13. Working time per employee averaged 9 hours per day and 51.66 hours per week. The average hours worked by employees per day or shift was 9 and per week 51.66.

The Corset Industry

Seventeen establishments were reported as engaged in the manufacture of corsets in 1923 of which 11 were in Ontario and 6 in Quebec. The value of the products showed a decrease from the previous year of \$397,451, the value for 1923 being \$4,887,535. On the other hand, the capital invested showed an increase of \$133,491, the amount reported for 1923 being \$6,155,454. The total number of employees of all classes declined from 1,747 in 1922 to 1,606 in 1923, a decrease of 141. The total payroll, however, rose from \$1,253,059 in 1922 to \$1,264,730 in 1923. The maximum number was reached in April with 1,318, while the minimum number recorded was 1,177 in July. Salaried officers of corporations numbering 18, of whom one was a female, were paid \$89,687; general superintendents and managers, numbering 26 (23 males and 3 females) were paid \$109,506; technical experts, accountants, etc., numbering 20 (14 males, 6 females) were paid \$38,665; clerks, stenographers, salesmen, etc., numbering 303 (146 males and 157 females) were paid \$340,590; 1,237 employees on wages (110 males and 1,127 females) were paid \$685,307 and 2 female outside piece workers received \$975. The days in operation on full time at the establishments averaged 239.7 and on part time 33.7. The number of days idle averaged 30.6. The hours worked by wage earners per day or shift averaged 8.3 and per week 46.1.

The British Trade Union Congress General Council is making extensive plans for increasing its activities in several directions. It will develop the efficiency of the Trades Council by means of a Joint Committee representing the General Council and the local Trades Councils: it will also extend its educational work and its international activities. It also has in view various other work for the assistance of the affiliated unions. Large plans for these branches of activities are now under way.

The General Council of the Trade Union Council has set up a special committee of seven to investigate the effect of foreign competition on industry. The Committee will collect information from the unions affiliated with the Congress as to the effect on wages, hours, etc., in the various trades. The Committee is also authorized to seek information from other countries, so that its report may be "a complete and authentic statement of the position".

OCCUPATIONS OF CANADIANS RECENTLY NATURALIZED

CERTIFICATES of naturalization under the Naturalization Acts of 1914 and 1920 were granted by the Secretary of State of Canada during May to aliens whose occupations are given in the following list:—

Manufacturers, 8; merchants, 37; live stock commission merchant, 1; professor of literature, 1; physician, 1; rabbi, 1; priest, 1; clergyman, 1; gentleman, 1; retired man, 1; no occupation, 1; photographer, 1; teachers, 3; druggist, 1; musician, 1; medical student, 1; mining engineers, 2; gas engineer, 1; electrical engineer, 1; storekeepers, 8; pool room proprietors, 2; restaurateurs, 6; hotel keeper, 1; theatre manager, 1; motion picture operator, 1; travelling superintendent, 1; insurance manager, 1; factory manager, 1; sales manager, 1; manager, 1; accountants, 2; clerks, 8; salesmen, 3; travellers, 2; farmers, 116; rancher, 1; gardener, 1; dairymen, 2; fish broker, 1; fish packer, 1; fish buyer, 1; trappers, 2; brewery foreman, 1; railway foreman, 1; grocers, 5; produce dealer, 1; fruiterer, 5; wholesale fruit dealer, 1; seamen, 3; fishermen, 10; labour foreman, 1; labourers, 128; miners, 27; carpenters, 22; lumbermen, 4; logger, 1; sawyer, 1; saw man, 1; contractor, 1; plasterers, 2; bricklayers, 3;

cement finisher, 1; electrician, 1; elevator employee, 1; firemen, 7; cooks, 7; chef, 1; housekeepers, 2; housewife, 1; tailors, 14; glove cutter, 1; dressmaker, 1; furriers, 2; leather worker, 1; loom operator, 1; designer, 1; pressers, 3; dry cleaner, 1; shoemakers, 8; railway labourer, 1; C.P.R. checker, 1; C.P.R. pensioner, 1; station agent, 1; trainman, 1; porters, 2; freight handler, 1; car repairers, 2; car builder, 1; truckmen, 2; truck driver, 1; freighter, 1; teamsters, 2; jitney driver, 1; chauffeur, 1; liverymen, 2; taxi proprietor, 1; painters, 8; sign painter, 1; blacksmith, 1; moulders, 5; foundry worker, 1; machinist's helpers, 2; machinists, 8; auto worker, 1; boilermaker, 1; riveter, 1; mechanics, 4; grinder men, 2; gilder, 1; crane operator, 2; core maker, 1; millwright, 1; cooper, 2; tin-smith, 1; locksmith, 1; steel worker, 1; longshoreman, 1; rooming house proprietors, 3; night watchman, 1; janitors, 2; furnaceman, 1; charwoman, 1; bakers, 4; butchers, 4; laundryman, 1; laundress, 1; waiters and waitresses, 4; barbers, 3; candy makers, 2; egg candler, 1; confectioners, 7; chocolate dipper, 1; peddler, 1; shipper, 1; upholsterer, 1.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the LABOUR GAZETTE relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial, commercial and home-making activities.

Quebec Convention on Technical Education

The first Canadian convention of delegates representing vocational schools, elementary schools, employers and employees was held in the Montreal Technical School, June 11 to 13 inclusive. Approximately 100 delegates assembled from all parts of the province to

discuss the problems of industrial education, apprenticeship and trade training.

The meetings were presided over by Dr. A. Frigon, Provincial Director of Technical Education, and were conducted under the auspices of the Provincial Government. Mr. C. J. Simard, Assistant Provincial Secretary, represented the government in the absence of the Hon. Athanase David, Provincial Secretary, who was unable to attend. Mr. A. W. Crawford, Federal Director of Technical Education, represented the Minister of Labour and conveyed greetings and best wishes to the convention.

On Thursday morning, immediately after the formal opening, the delegates inspected the exhibition of work done by the pupils of the technical school and visited the shops, class-rooms and laboratories of the school. All were very favourably impressed by the high standard of the work and the completeness and quality of the equipment and instruction provided. The school is undoubtedly one of the finest of its kind in America.

Thursday afternoon was devoted to discussion of the relation between vocational or technical schools and primary schools. Several papers on this subject were presented and keen interest was shown in the discussion. The need for preparatory courses in the elementary schools for pupils intending to enter vocational schools was stressed by several speakers and all emphasized the need for a better grounding in mathematics. The discussion brought out the need for a more careful selection of pupils for vocational schools and for closer co-operation between vocational schools and elementary schools. No definite action was taken but it is hoped that the discussion will lead to a better understanding of the problems of both types of schools.

Friday was devoted to papers and discussion on the relation between vocational schools and industry particularly in connection with apprentice training and the qualifications and training required by young people entering industrial employment. The need for a trade school for the building trades was stressed by several speakers and it was pointed out that such a school could not be successfully established until employers and employees were united in their desire for such an institution and could agree upon the programme to be adopted. It was suggested that the building industry should follow the example of the printing industry which by the united action of employers and employees has succeeded in having a printing school for apprentices established in connection with the Montreal Technical School. Several employers expressed the opinion that vocational schools should not attempt to provide specialized trade training but should teach the students to think and give them a general industrial training which will familiarize them with the problems of industrial life and help them to develop initiative and self-reliance. They stated that industry should train its own workers. It was noted that these speakers represented large industrial plants of a highly specialized nature in which training programmes could easily be established. Those who favoured trade schools represented the building trades and industries in which small plants predominate and in which work is seasonal or of such a nature that employees move frequently from one plant or employer to another. This discussion clearly brought out the necessity for very close co-operation between vocational schools and industry and for a careful study of existing conditions before attempting to establish school courses for workers in any industry. That much good work along this line is being done in Quebec was made clear by the reports from Grand Mere, Shawinigan, Three Rivers and other centres.

Towards the close of the afternoon session several topics were introduced including visual education, organization of student and graduate activities, vocational guidance, teaching of particular subjects, etc.

Saturday morning was devoted to discussion of problems affecting the organization and operation of vocational schools. This session was attended by official delegates only representing the various schools of the province. It resulted in the appointment of a committee to investigate and report upon the advisability of organizing a vocational teacher's association in the province. If deemed advisable the committee was empowered to draft a proposed constitution for submission at the next convention.

It was agreed to complete the work of the graduating year in each school so that students could commence work about June 1st.

After considerable discussion it was decided to commence the publication of a vocational education periodical for the province to serve the dual purpose of linking the schools together and of educating the public in respect to the purpose and value of vocational schools. Copies of this publication are to be distributed in all parts of the province to people who should take an active interest in the work of the schools.

The delegates favoured annual conventions similar to the Montreal meeting and showed by their enthusiasm and animated discussion that there was a need for such gatherings at regular intervals.

Changes in Provincial Staff of Ontario

Mr. F. P. Gavin, who has been acting principal of the Hamilton teacher training college, has been appointed permanently to the principalship. Mr. Gavin was director of technical education for the province, but interested himself in the college when it opened in April and took charge of the organization of the classes.

The new training college for technical teachers is in the nature of an experiment, though so far a successful one. It has been found difficult to secure vocational instructors who possessed not only technical knowledge and industrial experience but also training in teaching. The new college will supply the deficiency.

Mr. D. A. Campbell, principal of the Sarnia collegiate institute and technical school, will take over the duties of director of technical education. Mr. Campbell, prior to assuming the principalship of the Sarnia school, was director of technical education in Alberta from 1919 to 1921.

Mr. M. A. Sorsoleil, formerly organizer of commercial work for Ontario, and Miss E. I. McKim, formerly organizer of home economics, have also been appointed to the staff of the college.

Mr. F. S. Rutherford, formerly organizer of industrial education, has been appointed to the position of Assistant Director of Technical Education, and Miss Alice Hamill, formerly of the Kitchener-Waterloo collegiate and vocational school, succeeds Miss McKim as inspector of household science. Miss McKim will still be in charge of the clothing department.

Addition to Technical School at London, Ontario

The eight-room addition to the Technical and Commercial High School at London is to be completed by the first of September. Increased enrolment at the school necessitated the addition. Six of the rooms will be used for academic work, while the other two will have no partitions and will be used for gymnasium and assembly hall purposes. A saving will be effected each year through having gymnasium accommodation, as the school board in the past has had to pay the Y. M. C. A. for use of its floors. This is the second addition to the London school within the past two years.

A Modern Apprenticeship Plan

Mr. William Turnbull, chairman of the apprentice committee of Typographical Union No. 91, Toronto, Ontario, in discussing the practice of giving intelligence tests to all printing apprentices in Toronto, made the following statement to a representative of the *Toronto Daily Star*.

The printing industry, particularly the compositor's part, requires not only skill but a thorough understanding of grammar and a general knowledge of most subjects—at least more than the average man. To be able to read, punctuate and spell is just as necessary to a printer as a hammer and a saw is to a carpenter. The idea of submitting the boys to the intelligence test was to determine—scientifically determine—the adaptability of boys contemplating coming into our industry of their mentality. To the boys who were already in our industry it was the purpose to find out the weaknesses and by quiet and confidential talks help to strengthen those weaknesses, so that the boy will ultimately be a more proficient and competent printer, with a thorough understanding of his work. Do you know what that means? It means this: that the boy with a thorough understanding of his work will come into the composing room each day with that self-confidence that no

matter what kind of work he will be called upon to perform that day he will be able to do it—and do it well.

Here is a report of a boy who has just commenced his apprenticeship: His name, address, age, nationality, nationality of his father and mother, and occupation of his father are here given. Then follow a history of the boy, his schooling and his grading at school, etc. Then come the diagnosis and general remarks. To quote here: "Blank is a good type of lad, measures to an intelligent quotient of 102, and this is really his first job. As an only son, and apparently he has usually been associated with older boys or adults, he has not yet developed a very big amount of self-confidence nor does he place much reliance in his own judgment. He has not much leadership developed as yet, is inclined to accept the judgment of others rather than work things out for himself. This is a habit rather than a latent weakness and can be overcome. Probably the fact that he is the only child has led to a certain amount of indulgence on the part of the parents to make things easier for the lad. He is a bit careless as to details, but has good ability and should do well. With some coaching should develop into a good steady, reliable type. He is rather easily led—which may be an asset or a liability, depending on the type of suggestion he gets."

The committee, being in possession of a complete record of every apprentice from Dr. Clarke have also a progress card which is given to the foreman each month, who marks it with one of four designated letters; E (for excellent), G (for good), F (for fair) or P (for poor). The apprentice reports regularly to the committee, who, if they find a boy has been credited with two consecutive marks below G investigate and find out the reason for the non-progress. Upon that investigation depends the course to be pursued by the committee. For instance, if the apprentice's weakness is grammar the committee apply certain tests of construction and punctuation to help strengthen the weakness. He comes under the quiet observation and guidance of a workman who is known as the Big Brother. This Big Brother, working in conjunction with the committee, is informed from time to time of weaknesses when they are found, and by close observation of the boy and his work is able just at the psychological moment to give advice which will give to the work the boy is doing that scientific printorial effect. In most of the larger offices where the Big Brother is working much good, we hope, will be accomplished. He is in daily touch with the boys, and it is characteristic of printing offices in Toronto, particularly in newspaper offices, that

the desire to further the education of the apprentice is so manifest.

We have also a course in printing which every apprentice is obliged to take out when he commences his third year of apprenticeship. The lessons are done at home, and the written examinations are carefully gone over by the committee before being finally submitted to our bureau of education at Indianapolis. This bureau of education is in charge of Mr. John H. Chambers, under the direction of President James M. Lynch, of the International Typographical Union. The proper spelling, punctuation and capitalization of words and sentences are verbally elaborated on by members of the committee to the apprentices, and red ink marks on their examination papers thoroughly explained, and the reasons for the markings given. The boys then rewrite their papers and forward them to our headquarters, where again they are carefully gone over by experts who give their full time to this work. Percentages are awarded, and if the percentage is too low the apprentice rewrites that lesson until such time as we are satisfied that he has a thorough and practical knowledge of the particular subject under consideration at that time. Of course not only do we study grammar, although, perhaps, that is the most fundamental, but we study every subject necessary for the making of a competent printer, such as the materials used in type composition, the systems used in making type, the origin and characteristic of type faces, distribution, spacing, proofreading, display work, stationery, proportion, measure, balance, borders, title pages, headings, advertising, commercial work, catalogues, booklets, lockup and imposition, colour harmony, plate processes, etc. This course takes between eighteen months and two years to complete, depending upon the amount of time a boy applies to his studies.

Now that the committee have the services of Dr. Clarke and his comprehensive reports we are looking forward to the time when the Toronto graduate printer will be looked upon as the most competent worker in his line on the North American continent.

Management Principles of Apprenticeship

The following extracts are from the third of a series of articles on Management Principles of Apprenticeship by H. A. Frommelt, which appeared in *Industrial Management* for May, 1925.

Apprenticeship and education are essentially the same thing. Hence there must be something to teach, some one to do the teaching and obviously some to do the learning. These are the essential elements. They seem so obvious that it almost borders on the

ridiculous to call attention to the fact that when we have gotten a group of young men together whom we choose to call apprentices, we have by no means solved our apprenticeship problem. As a matter of fact, we have made a wrong beginning. We should have organized our trade facts and drawn them up into attractive schedules. Secondly, we should have organized a competent teaching staff to teach both the manual operations and the related trade technique. With these organized it would then have been opportune to induce young men to enter upon this educational programme.

Probably the vast majority of apprenticeship experiments at the present time are failures because these simple principles are not being heeded nor executed in the order named above. It is an everyday occurrence to hear a manufacturer exclaim, "I believe in apprenticeship; I want apprentices; and I would gladly engage some could I but find them." Nothing else has been done. No analysis has been made of the trade in question, to ascertain its essential educational features and hence, no adequate schedules of work have been drawn up. Finally no attempt has been made to discover the essential technical facts that pertain to the trade in question and hence no study of schedules of study have been made. No organization, of course, for the teaching of this body of organized trade facts has been called together. And yet these two elements, namely, the subject matter to be taught and the personnel to do the teaching, are by far the most important. As a matter of fact, it has been proven that if these two be present, apprentices will present themselves in sufficient numbers for every purpose no matter how difficult or uninviting on the surface the trade may appear.

It were just as illogical to expect pupils to present themselves to a proposed school where there was neither curricula nor teaching staff. In fact, this is hardly an analogy, it is almost an identity. If it were not for the fact that we have come to associate education with a classroom, this would be an identity. The execution of an apprenticeship does not differ in any essential from the execution of a formal education. We dare not forget that there are curricula to be drawn up for our modern apprenticeship and a teaching staff organized to execute this educational programme before we can hope to make apprenticeship really successful.

Our first problem then is to draw up an adequate schedule. And if it is adequate it will also be interesting. The trade in question must first be broken down into its essential

elements and these then arranged in their proper sequence and given their proper proportionate time in an attractive programme of shop work. This holds true for any trade or profession and must necessarily be the first step to set up a successful apprenticeship system. It is at this point that we come to realize that it is necessary in modern industry for smaller organizations to co-operate with the larger in carrying out an adequate programme of shop work. A small plant obviously seldom presents a complete programme of training. It is necessary to call on a larger organization to help them keep the programme. Hence it is necessary to organize apprenticeship district. This means co-operation; this means solidarity.

Thus far, we have only considered one phase of our training programme, perhaps the most important, nevertheless, but one portion of it. The technical foundation underlying every trade, and obviously every profession must also be arranged in schedule form and co-ordinated with the programme of shop training. The technical foundation for every trade in modern industry is so completely organized and recognized that there is no excuse for its not being included in any programme of industrial training. It is essential in an apprenticeship then, that we choose the essentials from this body of technical data and information, keeping in mind the class and grade of apprentices before whom we wish to lay such a programme.

This means some sort of classroom instruction. It is impossible to impart this technical information in an adequate and satisfactory manner in the shop at the same time that we are imparting the manual instruction. It must be the duty of someone in an apprenticeship organization to arrange this technical information in lesson form and be given sufficient time apart from the actual shop work to present this information in a satisfactory and interesting manner. This requires a trained teacher, thoroughly acquainted with the trade, preferably a craftsman himself and one who is acquainted with proper methods of pedagogy. Such technical instruction, however simple it may be, and it must be simple for the average sixteen-year-old apprentice, is not only necessary for the complete rounding out of a programme of apprenticeship but it will also go far towards making such a programme a real success. The inquisitiveness of youth can thus be satisfied. His questions as to the "how" and "why" of things can thus be answered. In this manner the most disagreeable trade can be infused with an interest that will hold the ambitious youngster. Only the largest industrial plants find it possible

to carry out adequately such a programme of technical instruction. Even the medium-sized plants generally find the burden too great for the returns. Hence we must either do that which does away with what seems to be essential and necessary in this matter, namely, all technical instructions, or organize modern apprenticeship along such lines as will make this possible. Hence, again if we inaugurate a district apprenticeship programme, such technical training becomes possible. A group of plants centering around one or more related trades, can in some central location, and by their own proportionate appropriations do such technical teaching as is necessary. This has been and is being accomplished satisfactorily in some few localities. But the principle of solidarity, the spirit of co-operation is necessary.

Modern developments in educational work are making this phase of industrial training steadily more simple and more accessible. The modern vocational school which has only recently been accepted in this country, but which had its origin in Europe quite some time before the war, has become an essential element in apprenticeship training. The vocational school is in no sense a trade school. It is designed to supplement part time education, the training that the employer cannot or will not give. The apprenticeship phase of the vocational school work is purely academic. The technical information which we have just considered as of such importance is here taught in an organized, systematic and supervised manner. Every industrial community in the United States, if it is to set up an adequate apprenticeship programme, must co-operate and support at all times a system of part time or vocational education. Here again we may note, the principle of solidarity enters. It is essential that employers co-operate to further this phase of an industrial education.

The third element to making the principle of education a success is obviously, from what has already been discussed, a complete corps of instructors, particularly in the shop work. It may be that individual foremen are competent to do this work. But it is more than likely, with the modern organization and developments in industry, that at some time during an apprenticeship it will be necessary to place the apprentice under an instructor whose chief duty is to teach the learner the manual phase of his trade and who has little connection therefore with production as such. Such instruction need not be continued throughout the entire apprenticeship. The apprentice may come under the direct charge of the foreman. But a certain portion of this

period of learning must be supervised and conducted by an instructor.

Here again it would seem that if only the smaller plants be considered, such an essential part of an apprenticeship programme must be waived. Hence, we must again have recourse to a district programme to the principle of co-operation, to the principle of solidarity. The smaller plants cannot obviously bear the burden of such shop instruction, only the medium and larger sized plants can do this. If, therefore, a number of smaller plants be grouped around a larger one, it will be possible to give all apprentices a period of intensive instruction in an organized and systematic manner. The apprentice can, after a proper period under an instructor in the large plant, be transferred to the smaller plant. Here, though he must forego formal instruction, the advantages of close contact with foreman, workers and related processes will compensate for such seeming disadvantage. In fact, it has been demonstrated and practised that such an arrangement is not only satisfactory but highly desirable. Every employer is thus drawn into a programme of apprenticeship training and gives his proportionate share to that programme. The apprentice, on the other hand, has all the advantages that come with a change in organizations, in men and processes.

This, then, is in essence, the principle of education. It is, upon analysis, so obviously simple that it requires little explanation. Something to teach, someone to teach, and someone to do the teaching—equals apprenticeship.

This is the formula. Providing we make each member of the equation to the left, adequate, we can maintain the equality.

Plans have been discussed for the establishment of a building trades school at the Delaware School, Syracuse, N.Y. The course, which is for all apprentices in the building trades, will cover a three-year period and will be supported by both builders and trade unions. For the present the courses are to be confined to the continuation and evening schools but the future development will carry the work into the vocational schools where day sessions are maintained.

A vocational course of the co-operative type is offered at the Williamsport high school, Williamsport, Pa., under the directorship of Mr. G. H. Parks. The course consists of two years of straight academic work, followed by two years of vocational work. Four trades, cabinet-making, machine shop work, pattern making and electrical installation, are taught. During the last two years, each one of the sixty boys in the course alternates between one week in school and two weeks in employment. Each boy is paid twenty cents an hour during his junior year and 25 cents in his senior year, and upon graduation is placed for one year as an apprentice at forty cents an hour. The course costs about \$120 per year, per pupil, or \$15 more than the academic course, and the Smith-Hughes subsidy pays about \$60 of the cost.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Ontario Government to Study Mining in South Africa

Mr. T. F. Sutherland, the chief inspector of mines of Ontario, has been commissioned by the provincial government to visit South Africa to study mining in the gold fields of the Rand, particularly with the view of suggesting improvements in the Ontario regulations for the prevention of accidents and diseases among mine workers. Included in the subjects for study are the following: silicosis or miners' phthisis, and the means taken to prevent and control this disease; deep winding of men and material; the effect of depth on temperature-artificial ventilation; the problem of pressure at depth; rock bursts and precautions to be taken; the general accident hazard in South African mines and preventive measures adopted; and the disposal of tailings and methods of fillings.

In referring to Mr. Sutherland's mission, the Honourable Charles McCrea, Minister of Mines of Ontario, stated that the existing regulations in the Ontario Mining Act are founded on South African practice. Nowhere in the world, he said, is gold mining carried on on a scale equal to that of the Rand. For the most part the shafts in South Africa are much deeper than those in Ontario, and the problems connected with mining at depth on a large scale and the dangers attendant upon them, have been encountered and dealt with, and the skill and technical ability possessed by the engineers and managers are well known. "With the possible exception of some of our nickel mines," he continued, "we have not yet had much deep mining in Ontario, but it is now evident that we are entering upon an era of mining at greater depths. Both the Hollinger and McIntyre gold mines are pushing

down their shafts, the latter having a present objective of 4,000 feet. At Kirkland Lake also, considerable greater depths are aimed at than have as yet been worked. It is obvious that the hazard in mining increases with depth; cables require to be heavier and stronger, hoisting machinery more powerful, and the difficulties of ventilation increase. Pressure inherent in the rock, scarcely noticeable in shallow mines, takes on a more menacing aspect with greater depth and shows itself in rock bursts and swelling of workings. So far this last-named feature, though not entirely absent, has not been formidable in Ontario, but it is quite possible that the danger from that source will increase as mines penetrate farther and farther into the crust of the earth."

More Fire Bosses Recommended

The *Coal Age* (New York) states that "at many mines fire bosses are given too large an area to inspect. In consequence gas and bad roof go undetected. The practice of over-tasking foremen and fire bosses should be stopped. It is a source of many accidents. The fire boss in such a case is less a protection against safety than an *alibi* against prosecution. When a fire boss is discharged and another not hired, if the tonnage is not decreasing, the matter is worthy of an investigation by the state inspector. Do inspectors with sufficient frequency inquire into the number of fire bosses on the job and the number of places inspected? Of course the coal thickness, the quantity of gobbed rock, the presence or absence of bad roof and the prevalence of gas are factors in determining the number of fire bosses needed, but the inspector should have a definite idea how many are requisite and, if not, should acquire that knowledge by taking a fire boss around himself, testing the roof and inspecting for gas as the regular functionary would be required to do."

"Radium Necrosis" and "Tetraethyl Lead Poisoning"

A disease called "radium necrosis," believed to be a new occupational disease, is claimed to be responsible for the death of five persons and numerous cases of illness among employees engaged in painting watch dials with radium paint at a New Jersey plant. After applying the paint the employees were in the habit of drawing brushes between their teeth to point them. As a result of these deaths, the United States Department of Labour has ordered a general survey of all radium plants in the United States for information concerning occupational diseases resulting from

handling of radio-active materials. If the disease is found to be occupational it is stated that efforts will be made to bring it under the provisions of the workmens' compensation laws.

At a plant manufacturing a lead compound used for treating gasoline, tetraethyl lead poisoning killed eight persons in eighteen months and made 300 seriously ill. The company is said to have exercised every possible precaution to protect their workers, spending \$2,000,000 for the plant and \$60,000 for improvements. They also sent specialists to care for the sick and paid benefits to dependents. The plants are now closed. Tetraethyl lead is a compound used in manufacturing "anti-knock" gasoline, the sale of which has been stopped in several states pending federal investigation into effects on pedestrians who breathe motor exhaust gases.

Five persons are reported to have died violently in straight jackets last autumn from lead poisoning contracted while making "looney gas" at an oil works in the state.

St. John's Ambulance Association Awards

The results of the St. John's Ambulance Association trophy competition for 1925 have recently been announced, the railway teams taking the following positions in the finals:—

Montizambert trophy, representing Canadian championship, Canadian National Railway team, Stratford, Ontario, the Ontario champion team with the Canadian Pacific Railway team, Calgary, Alberta, as runner up.

Wallace Nesbitt railway trophy: Car Department team Canadian National Railway, Montreal, with Canadian National Railway team, Fort Rouge shops, Winnipeg, as runner up.

Shaughnessy Police Shield (Eastern), the Canadian Pacific Railway, Windsor Station, Montreal, police took second place, and (Western), the Canadian Pacific Railway police, Calgary, Alberta, was also second.

The Lady Drummond Cup for championship in home nursing and first aid by women's teams, was awarded to the Canadian National Railway team, Montreal.

Medical Examinations in Pulp and Paper Industry

The Wayagamack Pulp and Paper Company and the International Paper Company have instituted medical services which examine physically all men now being taken on for employment and have arranged to examine all men now on their payroll, both in the factory and in the field. The dispensary staff are kept informed of all suspicious or positive findings of a tuberculous nature. Cases

are referred to the dispensary from these services. Of 575 men examined in one works, 20 were sent to the dispensary.

Recommendations of Coroners' Juries

The Coroner's jury in connection with the death of a crane operator at a structural steel works at Toronto, Ontario, on June 5, brought in a verdict to the effect that the company was responsible for not employing experienced practical workmen. It recommended that "the provincial government appoint certified engineers to inspect all factories and works at regular intervals, and to keep records for same, to make it more secure for the workers".

Blame for the capsizing of a sand sucker off Point Pelee on May 2, was placed by a coroner's jury at Leamington on the skipper of the craft, who was drowned with eight of the crew. Negligence on his part in ordering the sand sucker hose to be disconnected before the aperture through which it was thrust could be covered in the lee side of the rough sea was given as the cause of the accident. Several recommendations to the Canadian government were contained in the jury's report. The government was asked to equip the life saving station at Point Pelee with an up-to-date boat to replace an antiquated and unseaworthy craft; with a runway extending from one side of the point to the other so that the lifeboat could be used to quickly answer distress calls from either side, with a watch tower and with a new boathouse to accommodate the boat and the men.

The coroner's jury investigating the death of a lineman who was electrocuted through

contact with a live wire joint while in the employ of the Winnipeg Electric Company, recommended that it be compulsory that a foreman enforce the use of safety devices. It also recommended that the Bureau of Labour appoint a board to investigate cases of this kind and to see that all precautionary measures are taken to ensure against its recurrence.

Fourth International Medical Congress of Industrial Accidents and Diseases

The fourth International Medical Congress of Industrial Accidents and Diseases will be held at Amsterdam, September 7-11. Some of the subjects that will be discussed are as follows: Accidents and diseases from the medical point of view, diagnosis and outline of the occupational diseases; the legal and ethical aspects of industrial insurance in Great Britain; re-instatement of permanently and partially disabled workmen; accidents and tuberculosis; treatment of wounds with special reference to primary sutures; gas poisoning; work in overheated and damp-atmospheres; osteosynthesis (fractures); settlement by lump sums and small claims; the influence of legal social insurance on surgical instruction; nervous and mental diseases; pneumoconiosis; tumour and accident; injuries of the hand; assurance of accidents by labour in agriculture from medical point of view; traumatic affections of joints; abdominal injuries; dislocation of semi-lunar cartilages; occupational eye affections; psychotechnique, the question of fatigue; the achievements of industrial legislation and hygiene; occupational diseases of heart and vessels; adaptation.

"Current Rate of Wages" Law of Oklahoma Unconstitutional

The United States District Court for the Western District of Oklahoma had before it recently a case involving the constitutionality of the sections of the Oklahoma Compiled Statutes which require contractors on public works to pay "not less than the current rate of *per diem* wages in the locality where the work is performed" to their employees. Three judges concurred in the view that the statute, being penal, was too vague and uncertain to stand. There was penalty for each offence of not less than \$50 or more than \$500, or imprisonment not less than three months or more than six months, each day's violation constituting a separate offence. The phraseology of the act, "not less than

the current rate of *per diem* wages in the locality," together with the stringent provisions for punishment, was said to "deprive the complainant of his liberty and property without due process of law." The opinion continues:—"The statute wholly fails to provide an ascertainable standard by which a contractor may determine in advance what is the current wage in any given locality. Common justice demands that before a person may be deprived of his liberty by means of a criminal prosecution he must have been able to comprehend and to know in advance that if he commits certain acts such acts will violate the provisions of a penal statute, plain and definite in its statements."

NOTES ON LABOUR UNION ACTIVITIES

Dates of Coming Conventions

The International Longshoremen's at Montreal, Quebec, on August 10.

The International Typographical Union at Kalamazoo, Michigan, on August 10 to 15.

The Hotel and Restaurant Employees International Alliance and Bartenders' International League at Montreal, Quebec, on August 10.

Cigar Makers' International Union at Boston, Massachusetts, in August.

International Photo-Engravers' Union at Cleveland, Ohio, on August 17, to 22.

The call of the Trades and Labour Congress of Canada for its convention in September is given elsewhere in this issue.

American Federation of Labour

THE executive council of the American Federation of Labour was in session May 5 to 9, 1925. A special conference was held, also on May 6, between the international officers. Since the beginning of the present year efforts had been in progress in many localities and in many labour organizations to revive and sustain interest in organization work. This activity was converged under a national programme by the conference of May 6. The conference was called in accord with the decision of the executive council, and considered the general problems of organization and specifically the campaign formulated by the Union Label Trades Department. The campaign plans were approved by the general conference and will be submitted to the national and international organizations for action. The discussion in the conference clearly indicated that there is need of basing organization upon educational work that will give to the members of the union understanding of what the union is and how it functions, as well as familiarity with its historic development that will enable them to interpret the social service of the labour movement in raising standards of living, standards of human justice, as well as more or less clearly defined codes and ethics and good manners that ought to obtain between men whether employers or employed.

Under the plan of campaign adopted by the conference the country will be divided into five districts. To each district there will be assigned a unit of four persons, consisting of an advance agent, moving picture machine operator, entertainer and lecturer. Meetings will be arranged by the advance agent in

co-operation with State Federations of Labour and City Central Bodies. In addition to these meetings, when possible, there will be meetings conducted under the auspices of fraternal societies, women's clubs, Chambers of Commerce, Kiwanis and Rotary Clubs, that those outside of the labour movement may see and hear the true story of the struggle of the workers. This will be accomplished by means of a moving picture produced especially for this campaign, a lecture on the need of and benefits to be derived through organization, a moving picture display of union labels, and the distribution of literature.

Mr. Furuseth of the International Seamen's Union brought to the attention of the Council the movement to establish an international code for seamen through the League of Nations. One of the provisions in the proposed code is that seamen may be arrested if they quit their vessels even though in safe port. In view of the far-reaching consequences of such a code if adopted and the fact that discussion of its terms is now in progress to crystallize sentiment in favour of the proposal he requested assistance from the Council that would enable him to combat the propaganda.

New President of Brotherhood of Locomotive Engineers

The death occurred on June 12 of Warren Sanford Stone, president of the Brotherhood of Locomotive Engineers since 1903. His career was notable for the outstanding service he rendered to railroad labour, and for the success that attended the various enterprises launched under his administration. He was born on a pioneer farm in Iowa, and at nineteen was firing an engine. Rapidly he worked his way up, and his ability was early recognized by his fellow workers, who elected him from the engine cab to office in the organization. During the term of his presidency undertakings were started that were unique in the labour movement of the continent. The creation of labour banks, investment companies and co-operative stores and the establishing of a Widows' Pension Department were among signal achievements of the last five years of his life.

His successor in office, William B. Prenter, was formerly first vice-president of the Brotherhood. He has been an active member of the organization for nearly half a century. Born in Philadelphia, he went with his parents to Belfast, Ireland. When a young

man he returned to this continent, and entered the employ of the Grand Trunk Railway. Subsequently he transferred his services as an engineer to the Canadian Pacific Railway and was with that company on a run out of Ottawa in 1882. He was foreman of the Canadian Pacific Railway shops in Ottawa in 1884, and remained in active railroad work until 1906 when he began the official career that has now brought him to the presidency.

Brotherhood of Locomotive Engineers

A union meeting of the Canadian Divisions of the Brotherhood of Locomotive Engineers and the Grand International Auxiliary (the women's organization) was held at Montreal on July 8, Mr. William Spence, chairman of the executive committee, presiding. About 1,500 persons were in attendance. The business meetings were held in private, such matters as insurance, pensions and widows' pensions and questions relating to the welfare of the union being discussed.

Mr. W. B. Prenter, of Cleveland, Ohio, the new president of the Brotherhood, outlined the history of the organization from its formation by 12 engineers in 1863 to the present time when there is a membership of over 90,000, of whom 75 per cent are in the United States and Mexico and 25 per cent in Canada. He said that in the event of a strike of miners in the United States that there would be no co-operation or sympathetic strike on the part of the Brotherhood or any refusal to carry coal. The Brotherhood did not believe in sympathetic strikes, holding that contracts are inviolable.

The Brotherhood's bank in Cleveland, which was opened in 1920 with a capital of \$1,000,000 and a reserve fund of \$500,000, has now resources of \$26,000,000. The organization owns banks in Boston, Philadelphia, Alabama and Indiana, with capital of \$140,000,000. Over \$225,000 is paid monthly by the Brotherhood in death benefits, and since 1868 over \$50,000,000 has been expended in widows' pensions. About 20,000 members are receiving retirement or disablement pensions. Over \$3,000 daily is sent out from the head office of the Brotherhood at Cleveland for insurance, including death, accident and pension. About \$50,000 monthly is expended in legal fees for pleading members' cases.

Winnipeg was chosen as the city for the union meeting next year.

New Brunswick Federation of Labour

The twelfth annual convention of the New Brunswick Federation of Labour was held at Fredericton on March 17-19 under the presidency of Mr. J. E. Tighe, with 25 delegates

present. President Tighe spoke of the poor conditions of employment and the number of industries that had been closed down, stating that many of the province's best tradesmen had been forced to move either to the United States or to Western Canada. He suggested that the Federation should co-operate with any movement for the improvement of conditions not only in the province but throughout the Maritime provinces. He also urged the convention to do what it possibly could toward securing the passage of a Mothers' Allowance Act and a Minimum Wage Act for women and children.

The Federation's representatives on the Royal Commission of Inquiry into mothers' allowance and minimum wage for women and children acts (LABOUR GAZETTE, June, 1924, page 481) reported that sessions had been held in Moncton, Bathurst and St. John, and that surveys had been made in Chatham, Campbellton, Bathurst, Moncton and St. John. (The reports were tabled in the legislature on March 18 while the convention was in session). The secretary's report showed a balance in the treasury of the Federation on December 31, 1924, of \$139.94.

The following resolutions were adopted at the convention:—

1. Requesting the Government to redraft the Factories Act.
2. Urging on the Government the need for passing Mothers' Allowance and Minimum Wage Acts at the present session of the legislature.
3. Requesting amendments to the Workmen's Compensation Act to provide that in all cases of death, payments to widows and children shall be \$30 and \$7.50 respectively.
4. Requesting that the New Brunswick Power Act be amended to make it lawful for the City of St. John to sell hydro current in the County of St. John.
5. Urging the Government to provide free school books in all public schools.
6. Urging the Government to pass legislation giving effect to the recommendations of the Commission of Inquiry into Mothers' Allowances. (The Special Committee dealing with this report recommended that the proposed Mothers' Allowances Board should consist of five persons, two of whom should be women.)
7. Requested amendments to the City of St. John Commission Act to provide that a majority vote of the mayor and commissioners will be sufficient to pass a bond issue.
8. Urging the Government to pass the necessary legislation to give effect to the recommendations of the Commission of Inquiry into Minimum Wage Act for Women and Children.
9. Requesting the Government to give labour representation on all public boards and commissions appointed by them.
10. Requesting that the Educational Act be amended to provide for the election of municipality appointed members of school boards.
11. Instructing the officers of the Federation to ask the Government to increase the salaries of the members of the Workmen's Compensation Board to at least the amount paid the members of the Nova Scotia board.

12. Expressing the sympathy of the Federation for the Nova Scotia miners, and urging the delegates and local unions to do all in their power financially for them.

13. Expressing the Federation's appreciation of the Government in advancing vocational education in the province and for passing the necessary orders in council to provide for the examination and licensing of master and journeymen plumbers. (LABOUR GAZETTE, October, 1924, page 843).

A committee from the convention presented these requests to the Government who gave them a very cordial hearing, expressing its intention to go through with the Grand Falls development under public ownership as recommended by the Federation last year. (The labour legislation passed at the recent session of the New Brunswick Legislature is given elsewhere in this issue).

United Brotherhood of Carpenters and Joiners of America

The Ontario Provincial Council of the United Brotherhood of Carpenters and Joiners of America held its fourteenth annual convention at Windsor, Ontario, from June 25 to 27, with 19 delegates present.

The secretary-treasurer's report showed that at the time of the last convention 55 local unions and five district councils were included in the provincial council, and on June 24, 1925, the date of his report, there were forty-nine local unions and four district councils. The Ottawa district had consolidated three locals into one, thus saving the expense of maintaining two sets of officers, the Trenton and Oshawa unions had transferred their membership to Belleville and Whitby, and the Perth and Woodstock unions had returned their charters. There were 2,478 members in good standing in the province, and about 500 members in arrears. Last year the report showed 2,768 members and 500 in arrears, the loss being largely accounted for by members going to the United States to obtain work. Funds on hand and in the bank at the end of the year amounted to about \$800.

The convention discussed the dual organization of carpenters in the province. During the past year two of the local unions which had come over to the Brotherhood from the Amalgamated Carpenters of Canada had to protect themselves in the courts, the Amalgamated Union having sued them for the funds of the local. In one of these cases the decision had gone against the members of the Brotherhood (LABOUR GAZETTE, March, 1925, page 327). The convention decided to put forth every effort to consolidate the carpenters into one organization, and instructed the general officers to endeavour to reach an agreement with the headquarters of the Amalgamated Woodworkers of Great Britain so

that new arrivals in Canada might be enrolled in the Brotherhood. It was also decided that members of the Amalgamated Carpenters who might transfer to the Brotherhood should be credited with their years of membership.

The convention decided that continual information should be circulated among the members of the Brotherhood on such matters as the Compensation Act of Ontario, and commended the publication of *Labour* as a ready means to secure such information. Reference to this new paper is made elsewhere in this section of the GAZETTE, in the paragraph concerning the Labour Educational Association of Ontario. The convention considered that all accidents should be reported so that a complete record of the toll industry demands from workers can be compiled, and also because minor accidents often develop into major ones, and if these are not reported at once it is difficult to reach an adjustment of the claim when finally made. The need for reporting all accidents to the foreman, however small, was also emphasized. Another resolution asked that industrial hernia be included among the diseases compensable under the Workmen's Compensation Act.

The convention also endorsed the policies adopted at the convention of the Trades and Labour Congress regarding emigration and unemployment, some criticism being expressed of the Federal Government regarding its unemployment and immigration policies.

In regard to the question of the old members' home, the entire membership of the United Brotherhood of Carpenters and Joiners of America will be asked to vote on a proposal to sell all the property owned by the Brotherhood in the State of Florida and to place the proceeds of such sale in a pension fund. The convention expressed itself as opposed to the proposed sale, and decided to circularize the Ontario members advising them to register their votes against the sale.

Belleville was chosen as the place of meeting for the 1926 convention.

The following officers were elected: president, W. J. Jeffery of Windsor; vice-presidents, John H. Fisher, Kingston; Fred Hawes, Hamilton; and George Rewbury, Niagara Falls; secretary-treasurer, T. Jackson, Toronto.

National Trades and Labour Council

A new labour council was formed in Toronto early in June in which unions of a purely Canadian character only are represented. The organization meeting was under the auspices of the Canadian Federation of Labour. Among the bodies represented in the Council are the Amalgamated Society of Carpenters, the Canadian Electrical Trades

Union, the Toronto Transportation Employees and the Piano Action and Key Workers. The officers include: G. W. McCollum, president; Frank Morton, vice-president; G. J. Whitley, secretary; and E. Ford, treasurer.

Labour Educational Association of Ontario

A report of the twenty-third annual convention of the Labour Educational Association of Ontario was given in the last issue. A fuller account of this convention has since been received by the Department from the secretary, Mr. Joseph T. Marks. The annual report presented at the meeting showed that during the official year the Association was represented on all the various delegations which waited upon the provincial government in matters of concern to labour. It gave its support to the brewery workers, and valuable assistance to the journeymen barbers in their effort to secure the passage of the Barbers License Act; co-operated with the Toronto Building Trades Council, to induce the Ontario Government to erect a new departmental building in Queen's Park and to safeguard the workers by the incorporation of fair wage contracts in all the contracts thereon, also to have the eight-hour day and forty-four hour week the standard on all government public works. The Association also launched the campaign, now on, to boost the union label and organize union label leagues throughout the entire province. It is giving its support to the Typographical Union to induce all Canadian businessmen to have their printing done in Canada instead of in the United States, and, at all times, have union men boost the sale of Canadian products, thus employing their own people at home and minimizing the menace of unemployment. The Association is actively agitating for old age pensions and championing the cause of public ownership. The secretary has done some effective work outside campaigning to advance the aims and objects of the organization, in which he has met with encouraging results. The first afternoon's business was the outlining by the secretary of plans for launching the provincial labour paper. Despite the tying up of the association's funds by the Home Bank failure, including all moneys received as subscriptions to the provincial paper, and other obstacles that had been faced, the organization had far more than made up its monetary losses. Every dollar of subscription money had been made good and banked in a special separate account. The auditor's report had shown a growing revenue and very substantial balance in its general fund. Since the free sample copy of "The People's Cause" had been sent out, despite the business depression, the number of affiliated unions had more than doubled

and the association is now in shape to take action, with the absolute assurance that it has the solid support of the provincial labour movement behind it. After a full discussion the convention unanimously voted approval of the plans outlined and pledged its hearty co-operation to ensure the success of the undertaking.

In regard to the immigration question, protests were made against the indiscriminate importation into Canada of a class of immigrants which it was impossible for the country to absorb. Mr. W. G. Egan, Deputy Minister of Immigration of Ontario, replying, stated that he "could not understand the reference to false pretences being practised to induce people to come to Canada, as all intending immigrants can obtain the latest available information respecting conditions in Canada, should they make the necessary enquiries at any of the Departmental offices." Other speakers stated that immigrants had been induced to come to Canada on the assurance that jobs had been secured to them, only to find upon arrival that there were no jobs for them, and that thousands of others were out of work.

British National Conference of Labour Women

The British National Conference of Labour Women was held at Birmingham, England, on May 27 and 28 under the chairmanship of Miss Ellen Wilkinson, M.P. There were present 861 delegates representing women's sections of trade unions, labour parties, co-operative guilds and other organizations. The conference demanded the adoption of a national policy for the control and the production and distribution of wheat and bread, including (1) encouragement of the growing of wheat in Great Britain by requiring better farming, development of co-operative methods in production, buying and selling, and freer access to the land; and (2) the establishment of a National Wheat Board, representative of organized consumers and producers. The proposed Board would purchase surplus wheat in the Dominions and other countries; exercise control and, if necessary, a monopoly of all importations of wheat; buy home supplies; establish granaries for storage; examine into all costs of milling operations and, if necessary, control or take over the mills; and reorganize the whole retail trade of baking and distribution through the non-profit making channels of co-operative and municipal enterprise. The Board would also seek to promote the fair distribution of world supplies under the auspices of the League of Nations and in co-operation with the International Institute of Agriculture.

In view of the conflict of evidence with regard to the Canadian Land Settlement scheme, it was found impossible to come to any decision with regard to it, but the Standing Joint Committee was instructed to pursue its investigations, and issue a further report.

The conference urged on local authorities the advantages of appointing, in addition to trained nurses for looking after children in accidents, sudden illness, etc., trained children's nurses, or matrons, who would be attached to infant schools and made responsible for the cleanliness and decency of the lavatories, and for the training of little children in healthy bodily habits.

The enfranchisement of women at the age of 21 on the same terms as men was favoured by the Conference.

A resolution was also adopted protesting against the contributory basis of the new widows' pensions and old age pensions legislation (LABOUR GAZETTE, June, 1925, page 580). It was declared that the burden of large insurance payments could not be met by the workers without seriously lessening the scanty provision for food and other necessities. The conference repeated its demand for a non-contributory scheme for widows' pensions, providing an adequate allowance at least equal to war pension rate for widows with children dependent upon them and for mothers and children whose breadwinners have become incapacitated.

Official Exchange of Rhodes Scholarship

The first official exchange of labour union Rhodes scholarships between the United States and Europe will begin on October 1, when Mr. William Ross, machinist, of Baltimore, Maryland, will go to Ruskin College, Oxford, England, and Mr. Horst Berenz, wood turner, will go from the free city of Danzig to attend Brookwood Labour College at Katonah,

New York. The scholars arrange for their own travelling expenses under the terms of the exchange but their tuition and living costs are borne by the institution acting as host. Mr. Ross' trip will be financed by the machinists' union at Baltimore, and Mr. Berenz will be sent by his wood turners' craft in Danzig, the German Woodworkers' Union.

Trade Union Educational League

William J. Foster, the secretary-treasurer of the Trade Union Educational League, has sent to all regularly accredited trade union delegates who are also members of the workers' party a set of resolutions including the following:—

Resolution on unemployment: Resolved that (1) industry must maintain its workers by taxing itself for maintenance of its workers at full union rates of wages when private operation fails—(2) mines and railways must be nationalized and put into operation for benefit of workers, not for profit of capitalists, since unemployment in these and other basic industries is sufficient proof of breakdown of private ownership and operation—(3) national, state and local government is responsible for full maintenance of all unemployed at union rates of wages, costs of which are to be borne by levy upon accumulated profits of capitalists—(4) All unions are urged to carry through united campaign on basis outlined.

Resolution on labour banking: Resolved that (1) no more labour banks should be organized along present lines of capitalistic enterprise—(2) all existing banks should be organized along lines of true co-operative organizations, with control in hands of rank and file, and investments restricted to non-capitalist enterprise.

Resolution on Baltimore and Ohio Plan: Resolved that the Baltimore and Ohio plan, together with whole programme of class collaboration of which it is manifestation, should be repudiated.

Truck Farmers and Dairymen Organize

It is announced that about 1,500 truck farmers and dairymen in the vicinity of Cleveland, Ohio, have organized into labour unions, in a campaign which is being conducted by the Cleveland Federation of Labour.

Index Numbers of Security Prices, June, 1925

The Dominion Bureau of Statistics weighted index number for 21 industrial common stocks (1913=100) rose 2.9 points in June being 146.3 as compared with 143.4 in May. The rise was due chiefly to the influence of the pulp and paper, textile, food and miscellaneous groups. The index number for pulp and paper stocks rose from 153.9 to 158.2. Clothing and textiles were 258.4 as compared with 254.3 in May. Foods and allied products rose from 144.5 to 152.4. Canadian Salt and B.C. Fishery and Packing being the chief influence. Miscellaneous stocks, due to the influence of F. N. Burt

and Consolidated Smelter, rose from 217.3 to 222.2.

Then bank stocks rose from 97.4 to 98.6 the upward movement being almost general.

Ten public utility stocks dropped slightly being 76.3 in June as compared with 76.5 in May. Power company stocks were higher but their influence was offset by the drop in the price of transportation stocks. C.P.R. fell during the month from 143.5 to 140.2.

The combined index for 51 common stocks (31 industrials, 10 bank, 10 public service) was 107.5 in June, a rise of 1.3 points above May.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Seventh Session of the International Labour Conference

THE Seventh Session of the International Labour Conference (League of Nations), constituted under the provisions of the Treaties of Peace, was held in Geneva, Switzerland, from May 19 to June 10.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are, briefly, to promote the improvement of industrial conditions by legislative action and international agreement.

Six previous sessions of the International Labour Conference have been held as follows: Washington, D.C., 1919 (LABOUR GAZETTE, December, 1919); Genoa, Italy, 1920 (LABOUR GAZETTE, October, 1920); Geneva, Switzerland, 1921 (LABOUR GAZETTE, January, 1922); Geneva, Switzerland, 1922 (LABOUR GAZETTE, December, 1922); Geneva, Switzerland, 1923 (LABOUR GAZETTE, 1923); Geneva, Switzerland, 1924 (LABOUR GAZETTE, August, 1924).

Under the terms of the Treaties of Peace, each State adhering thereto is entitled to four delegates to the International Labour Conference, two of whom must be Government delegates and the two others are to be delegates representing, respectively, the employers and the workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate may be accompanied by advisers not exceeding two in number for each item of the agenda.

The decisions of the Conference may take the form of either a Recommendation or a Draft Convention. A two-thirds majority of the votes cast by the delegates is required for the adoption of any Recommendation or Draft Convention by the Conference. The

International Labour Office Building, Geneva, Switzerland.

Recommendations and Draft Conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties, within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case

later than eighteen months from the closing of the Conference, to bring the respective Recommendations or Draft Conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Countries Represented

Of the fifty-seven countries which are members of the International Labour Organization, forty-six countries sent delegations to the 1925

Conference, including Ministers of Labour or members of Governments of ten countries. Over three hundred delegates and technical advisers were in attendance. The forty-six countries represented comprised the fullest representation of any of the annual conferences yet held.

A list of the countries represented follows:

South Africa.	Hungary.
Germany.	India.
Argentine Republic.	Irish Free State.
Australia.	Italy.
Austria.	Japan.
Belgium.	Latvia.
Bolivia.	Lithuania.
Brazil.	Luxemburg.
British Empire.	Nicaragua.
Bulgaria.	Norway.
Canada.	Paraguay.
Chile.	Netherlands.
China.	Peru.
Colombia.	Poland.
Cuba.	Portugal.
Denmark.	Roumania.
Spain.	Kingdom of the Serbs, Croats and Slovenes.
Estonia.	
Finland.	Siam.
France.	Sweden.
Greece.	Switzerland.
Haiti.	Czechoslovakia.
Honduras.	Uruguay.
	Venezuela.

Canadian Delegation

The Canadian delegation in attendance at the Conference is as follows:—

Delegates representing the Government of Canada—

Mr. H. H. Ward, of Ottawa, Deputy Minister of Labour for Canada.

Dr. W. A. Riddell, of Geneva, Switzerland, Dominion of Canada Advisory Officer, League of Nations.

Technical advisers to the Government delegates—

Honourable Dr. Forbes Godfrey, of Toronto, Ont., Minister of Health and Labour of the Province of Ontario.

Honourable Laureat Lapierre, of Quebec, Member of the Executive Council of Quebec.

M. Pierre Beaulé, of Quebec, P.Q., President of the Confederation of Catholic Workers of Canada.

Delegate representing the employers of Canada—

Mr. John Lowe, Jr., of Valleyfield, P.Q., General Manager, Montreal Cotton Company, Ltd.

Technical adviser to the employers' delegate—

Mr. Hugh Macdonald, of Toronto, Ont., Legal Secretary, Canadian Manufacturers' Association.

Delegate representing the workpeople of Canada—

Mr. P. M. Draper, of Ottawa, Ont., Secretary-Treasurer, Trades and Labour Congress of Canada.

Technical adviser to the workpeople's delegate—

Mr. Gustave Francq, of Montreal, P.Q., Chairman, Quebec Provincial Executive Committee, Trades and Labour Congress of Canada.

Agenda of Conference

The Agenda of the Conference included the following subjects:—

I. Workmen's Compensation.

II. Equality of treatment for national and foreign workers as regards workmen's compensation for accidents (final vote on the Draft Convention and Recommendation adopted by a preliminary vote of the Conference at its Sixth Session).

III. Weekly suspension of work for twenty-four hours in glass-manufacturing processes where tank furnaces are used (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).

IV. Night work in bakeries (final vote on the Draft Convention adopted by a preliminary vote of the Conference at its Sixth Session).

In addition to the foregoing it was intimated that a general discussion would be held in the Conference of problems of social insurance and that the Conference would also re-elect a Governing Body of the International Labour Organization to hold office for a period of three years.

Officers of the Conference

The following were elected as officers of the Conference:—

President.—Mr. Edouard Benes, Minister for Foreign Affairs of Czechoslovakia.

Vice Presidents.—Mr. Emilio Bello Codesido, Government Delegate (Chile); Mr. Ch. Tzaut, Employers' Delegate (Switzerland); Mr. Edward Lawrence Poulton, Workers' Delegate (British Empire).

M. Albert Thomas, Director of the International Labour Office acted as Secretary-General of the Conference.

The President's Address

Mr. Benes on his election as President delivered a notable address, dealing, among other things, with the relation between the International Labour Organization and the general problems of world peace, the vital importance

of a concerted international advance in social legislation from the standpoint of a progressive country such as Czechoslovakia and the dominant need for the universal adoption, in the present period of social and economic instability, of a policy of pacification, consolidation and reconstruction.

"The Great War", he said, "gave rise to two great opposing tendencies in the sphere of social policy. It led to events which constitute a great social and economic revolution, as well as a great political upheaval. The various countries were thus led to make a great effort towards social reform, the most striking testimony to which is to be found in the discussions of our Conference. No country has escaped this irresistible current.

"At the same time, however, the War created unprecedented social difficulties: markets were destroyed; countries were impoverished; there was a crisis in the exchange rates; international trade was hindered; and the final consequence was the unemployment crisis so greatly feared by the working classes. These conditions have sometimes hindered the great work of social reform which the International Labour Office was undertaking.

"If post-war Europe is to recover, it is necessary for statesmen to reconcile these two opposing tendencies which resulted from the great catastrophe of 1914. A policy of pacification must be carried out with patience and perseverance. I have sometimes expressed the work which we have to do in three words, which I think ought to be taken as a motto by every sincere democrat and every statesman worthy of the name—Pacification, Consolidation, Reconstruction. The true aim of every statesman should be to emulate other countries, not in material expansion but in inventing measures, methods and laws to make citizens of all classes more happy, contented and prosperous. Much is being done here at Geneva to help forward the realization of this aim in modern countries. This is one of the great contributions of your institution to the peace of the world.

"When I consider the present international situation I remain an optimist in spite of everything. The work of consolidation is making good progress. In spite of the checks which have recently been encountered in the work of promoting peace, other ways have been found of achieving this object. Slow but steady progress is clearly evident in all parts of Europe. The two great currents of social life to which I have referred will unite, and will guide our progress toward the realization of the great principles and ideals of social policy of which our institutions are the expression.

"I venture to express not merely the hope, but the certainty that the work of the Seventh Conference will lead to new progress in the direction of the pacification, consolidation and reconstruction of the post-war world."

Appointment of Committees

Committees were appointed to deal with the various subjects before the Conference as follows:—

Credentials Committee.—Three members—one from each group.

Selection Committee.—12 Government delegates, 6 employers' delegates, and 6 workers' delegates, nominated by the respective groups.

First Committee.—Compensation for Industrial Accidents (36 members—12 Government, 12 employers and 12 workers).

Second Committee.—Occupational Diseases (18 members—6 from each group).

Third Committee.—General Problems of Social Insurance (36 members—12 from each group).

Special Committees.—(1) Equality of Treatment (18 members—6 from each group).

(2) Night Work in Bakeries (24 members—8 from each group).

(3) Weekly Suspension of Work in Glass-Manufacture (24 members—8 from each group).

Sub-Committee of Selection Committee on Amendments to Standing Orders.—(9 members).

Dr. W. A. Riddell was chosen as one of the members of the government group, and Mr. P. M. Draper as a member of the workers' group on the Selection Committee.

Mr. H. H. Ward, Deputy Minister of Labour, acted as a substitute for Dr. Riddell at a number of the meetings of the Selection Committee.

Canada was represented on all three groups of the Committee on Compensation for Industrial Accidents. Mr. H. H. Ward was elected as a member of the government group. Mr. John Lowe as a member of the Employers' group and Mr. Gus Francq, as a member of the Workers' group on this committee.

Honourable Dr. Forbes Godfrey, Minister of Health and Labour of Ontario, was elected as a member of the government group of the Committee on Occupational Diseases.

Mr. John Lowe was elected as a member of the employers' group of the Committee on General Problems of Social Insurance.

Mr. P. M. Draper was elected as a member of the workers' group of the Committee on Suspension of Work in Glass Manufacturing Processes.

Mr. John Lowe was chosen as a substitute member of the employers' group of the Committee on Night Work in Bakeries.

Annual Report of the Director

The annual report of the Director of the International Labour Office, a volume of over 500 pages, was distributed shortly in advance of the opening of the Conference. It contains a comprehensive and detailed survey not only of the activities of the Office during the year 1924, but also of the progress of legislation, national and international, on hours of labour, protection of women and children, and the many other social problems with which the International Labour Organization is called to deal. It contains also a summary of the annual reports received from Governments, in accordance with Article 408 of the Treaty of Versailles, on the measures they have taken to give effect to Conventions which they have ratified. These reports constitute, in effect, the reciprocal guarantee given by States which are parties to a Convention that they are actually carrying out their mutual undertakings.

The reader will find in the report a complete picture of the life and work of the Organization during a year which was one of universal economic and social unsettlement. The past year brought solid results, and the smooth and efficient working of the Organization has been demonstrated, proving that it now rests with the States and the individuals who are in control of industry and industrial conditions to enable the Organization to attain its full stature and realize the hopes which went to its creation. In the words of the report the Organization "has now acquired the qualities of regularity, stability and equilibrium. Neither in connection with the competence and working of the Governing Body nor in connection with the constitution of the Conference has any dispute arisen, nor has the regular participation of the countries in the work of these bodies been hampered by uncertainty. There is no more characteristic evidence of this than the genuine effort being made for the despatch of complete delegations to the Conference. Within the Office itself there is no further question of reorganization. The staff as a whole has the guarantees of security for the future which may legitimately be expected. The work seems well adapted to the objects which it has to fulfil. When the Divisions and the Sections of the Office are installed

in the new building, which will be completed on simple and rational lines both inside and out within the next few months, they will be able in the new surroundings to continue the work planned in the well conceived programme drawn up five years ago."

The Director, believing that given the active support of the member States the possibilities of the Organization are endless. At the same time he sees the existence of the Organization threatened by the half-hearted support of its members. "What will become of the Organization," he asks, "if the obstacles which perpetually hinder all endeavours to establish international labour legislation cannot be effectively overcome, and if the great States refuse to ratify Conventions? Can the maintenance of the Organization be guaranteed if its activities are confined to the work of information and scientific research? If future possibilities are to be estimated the results hitherto obtained must be more clearly defined."

An important section of the report outlines the labour legislation that has been enacted in the various countries of the world to give effect to Draft Conventions. Fifty additional ratifications were registered between June 1924 and April 1925, bringing the total number up to 146. Still more important however than the number of ratifications is the putting into operation of the system of mutual supervision instituted by the Treaty. A striking fact in 1924 is that a first attempt was made to apply Article 409.

This article is as follows:—

Article 409. In the event of any representation being made to the International Labour Office by an industrial association of employers or of workers that any of the members has failed to secure in any respect the effective observance within its jurisdiction of any convention to which it is a party, the Governing Body may communicate this representation to the Government against which it is made and may invite that Government to make such statement on the subject as it may think fit.

It is anticipated that the Organization will from this first experience derive fresh vitality. In the first place, it is evident that complaint emanating from an organisation of workers may lead to effective results. In the second place, the Governing Body has found it possible to draw the attention of a State to errors or omissions in application without disturbing its sovereignty or even its legitimate susceptibilities. As a clearer understanding of the machinery of the Organization spreads so it will be possible to make more effective use of it to secure the workers in all countries the social reforms contained in the Treaty of Peace.

Another section treats of the increasing important publications issued by the Office. These

have now attained practically their final form. Regular correspondence has been instituted with Governments, and employers' and workers' organizations have formed the habit of having recourse to its services, showing that in the sphere of international information, as in other departments, the Office has acquired a definite conception of its duties and that it is carrying them out to the satisfaction of those whom it has to serve.

Chapter IV contains an outline of the direct relations maintained by the Office with labour and employers' organisations and with public departments. In this connection reference is made to the schism created by the Communist party who are accustomed to denounce the International Labour Office as a creation of the "capitalist governments," and a device for deceiving the workers. In 1924, however, communist activity in its various forms does not appear to have influenced either the methods or tactics of the great trade union organisations, which have constantly declared themselves in favour of reform as opposed to revolutionary methods. None of the great industrial organizations has so far disassociated itself from the Office, and existing relations have been maintained in a spirit of cordiality and confidence. It is in order to carry out the programme laid down in the Peace Treaty, and to gather round it all those who can help it in this work, that the Office has to develop its relations. It is in this spirit that in the past year, as previously, the Office has carefully studied all movements for social reform and has endeavoured to collect and to retain the assistance, collaboration and sympathy which it needs for its work.

Another section of the Report examines the tangible results so far attained. The quality of the work of the International Labour Organization, it points out, will be judged by the extent to which the principles of the Treaty of Peace have been carried out in law and practice in the various countries, by the number of workers to whom the benefits of social reform have been extended. Once more the bare figures may be quoted: 146 ratifications registered by the Secretary-General of the League of Nations as against 96 immediately before last year's Conference, and as against 73 in 1923. There are Conventions that have now been ratified by 10 States (minimum age for admission of children to industrial employment), by 13 States (Employment of women during the night), by 17 States (Unemployment), and among these States are some of the most important industrially. These are solid results; but the whole effect of the Office's work cannot be expressed by such statistics. The decisions of the Conference have also suggested and inspired new laws and regu-

lations. The principles laid down in the Labour Charter have opened up new perspectives and started new movements; thus, quite apart from ratifications, the Organization exercises unquestionable moral authority, and its inspiring influence grows. These things have been said before, but they cannot be repeated too often. Every page of the Report bears witness to their truth—the paragraphs describing the legislative reforms whose origin can be traced to the Convention, the references to the legislation of the countries created or re-created as the result of the war, the account of the efforts made by India and Japan to carry out the Conventions which they have ratified, the statement of the beneficial results of the Office's action on the Mandates Commission on behalf of those workers whose conditions are still inferior to those of the majority of modern wage-earners, the record of the hesitating but useful efforts that have been made to assist classes of workers unable to defend themselves, as for example women and children, in the various countries. If these parts of the Report are properly considered, they cannot fail to convey the conviction that the seven million francs for which the 56 States have made themselves collectively responsible are not spent in vain.

Discussion of Director's Report

The report of the Director was under discussion in the Conference from May 25 to May 30. An opportunity was afforded in this discussion to the various Governments represented of stating their respective policies with regard to the Conventions and Recommendations which had been adopted at previous sessions of the Conference.

Not unnaturally, the Convention which provided for the adoption of the eight hour day and forty-eight hour week in industrial undertakings took the most prominent part in the discussion. The workers' group at the outset of the proceedings challenged the Government representatives to define their attitude towards this Convention. The request was complied with and the Conference listened to statements by the Minister of Labour or other Government representatives of Belgium, Great Britain, Bulgaria, Germany, Switzerland, France, Italy, Denmark, Poland, Japan and India.

The main fact which emerges from the speeches is that without exception the Governments desire to see a general ratification of the Eight Hour Day Convention but that most of the Governments, and especially those of the great industrial countries of Europe, are disinclined to take isolated action. It was frankly recognized by most of the

speakers that certain difficulties of interpretation of the Convention and adaption of national laws stand in the way of immediate ratification by this or that country alone. At the same time, there appeared to be no objection to a resumption of the "conversations" which took place last year between Ministers of various European countries with a view to finding an agreed solution of any difficulties that exist and facilitating ratification. The discussion may be said to have clarified the situation by enabling each Government to know where the other Government stood on this subject, and to this extent the ground has been prepared for further efforts to secure a concerted adhesion to the Convention.

Address by Canadian Government delegate

In the course of the debate on the Director's report, Dr. W. A. Riddell, one of the two Government delegates from Canada, availed himself of the opportunity of expressing the greetings of the Canadian Government to the International Labour Conference and of referring to the attitude of the Government of Canada towards the work and aspirations of the Organization. He observed that this attitude was very clearly shown in the following statement which was made by the Right Honourable W. L. Mackenzie King, Prime Minister of Canada, in a letter sent to the various provincial governments inviting their attention to the work of the International Labour Organization:—

"The object sought in the creation of the International Labour Organization is undoubtedly the industrial well-being of the workers of the world, and you will, I am confident, agree that it is one that may well engage the highest efforts of all Governments."

The speaker referred to the special position of Canada as a federal state in which legislative jurisdiction was divided between the federal parliament and the provincial legislatures. The law officers of the Crown in Canada had found that in a number of cases the proposals embodied in Draft Conventions and Recommendations were within provincial jurisdiction. The subject matters in question had accordingly been brought to the attention of the respective provincial authorities and a conference had been held between the Federal Government and the provincial governments in 1923 at which the whole subject had been thoroughly discussed. Dr. Riddell mentioned that in connection with the duties of the position which he formerly held on the staff of the International Labour Office he had personally visited the various

provincial governments with the object of explaining the work of the Organization. A study of the existing legislation of the provinces went to show that the same was already in substantial accord with more than one-half of the proposals contained in the Draft Conventions and Recommendations which had been submitted to them from the International Labour Conference. Mention was made of the fact that British Columbia was the first province in Canada to accept the eight hour day and to put it into operation. British Columbia had also accepted two other Conventions, and resolutions had been adopted by the Provincial legislatures of Saskatchewan and Nova Scotia endorsing the proposals contained in a number of the Draft Conventions and Recommendations.

Turning to the attitude of the Federal Government, Dr. Riddell mentioned that since the 1924 Conference legislation had been adopted by the Dominion Parliament accepting four of the Draft Conventions of the International Labour Conference affecting seamen. It was hoped that ratification of these four conventions would be registered very shortly with the Secretary-General of the League of Nations. Other points dealt with were the need for greater representation of overseas countries among the staff of the International Labour Office; an improvement in quality and greater expedition in the dispatch of office publications; the desirability of holding sessions of the Conference only once in every two years; and the quality of representation for countries of immigration and for countries of emigration on the permanent emigration commission of the International Labour Office.

Mr. Albert Thomas, Director of the International Labour Office, replied at length on June 1 to various points which had been raised by speakers in the Conference in connection with his annual report. The Office, he said, had done everything in its power to hasten the progress of ratifications. It had, indeed, been reproached with having gone too far in that connection. It should be remembered that the International Labour Office was not a super-state; the contracting states alone had the right to determine the execution of their obligations. Complaints had been registered by the workers' representatives against the "small number of ratifications" but when they realized the difficulties of procedure and the fact that Governments were overburdened with work relating to their national affairs, was there, he asked, room for surprise that so few ratifications had been obtained. In his concluding remarks the Director declared that international collaboration afforded the

only hope of solution of the present difficulties of the world. The Conference, therefore, should not lose its conviction of the future that belonged to the International Labour Organization for "Only by retaining our faith in peace and social justice will this Organization produce the results of which it is capable, and for which it was designed."

Election of Governing Body of International Labour Office

The Conference re-elected the Governing Body of the International Labour Office for a period of three years. The only change made in its composition was the substitution of Argentina and Norway for Chile and Finland as two of the four States, other than the eight states of chief industrial importance, which have seats on the Governing Body. Six representatives each of the employers and of the workers were re-elected, including Mr. Tom Moore, president of the Trades and Labour Congress of Canada. Under the provisions of the Peace Treaty, the eight countries of chief industrial importance in the membership of the International Labour Conference are entitled to seats on the Governing Body, and four other government representatives are chosen from the other member States. Canada was declared by the Council of the League of Nations in 1923 to be one of the states of chief industrial importance, and therefore retains its seat on the Governing Body. The choice of workers' representatives is made from all the countries which are represented in the International Labour Organization.

The Governing Body as composed at present is as follows:—

Government representatives:— Argentina, Belgium, Canada, France, Germany, Great Britain, India, Italy, Japan, Norway, Poland and Spain.

Employers' representatives:—Sir James Lithgow (Great Britain), Mr. Pinot (France), Mr. Olivetti (Italy), Mr. Carlier (Belgium), Mr. Hodacz (Czechoslovakia) and Mr. Gemmill (South Africa).

Workers' representatives:—Mr. Jouhaux (France), Mr. Poulton (Great Britain), Mr. Tom Moore (Canada), Mr. Muller (Germany), Mr. Oudegeest (Netherlands) and Mr. Thorberg (Sweden).

Workmen's Compensation for Accidents

A Draft Convention was definitely adopted with regard to workmen's compensation. This provides that workmen who suffer personal injury due to an industrial accident, or their dependents, shall be compensated on terms at least equal to those provided by the Con-

vention. The laws and regulations regarding compensation are to apply to workmen, employees, and apprentices in any enterprise, undertaking or establishment, whether public or private. Exceptions may however be made in respect of casual workers, home workers, members of the employers' family who work exclusively on his behalf and who live in his house, and non-manual workers whose remuneration exceeds a limit to be determined by national legislation.

The Convention does not apply to agricultural workers, who are covered by a Draft Convention adopted in 1921 regarding workmen's compensation in agriculture.

The compensation payable in case of permanent incapacity or death shall be paid in the form of periodical payments; provided that it may be wholly or partially paid in a lump sum, if the competent authority is satisfied that it will be properly utilized.

In case of incapacity, compensation shall be paid not later than as from the fifth day after the accident. Additional compensation is provided when the incapacity is such that the injured worker must have the constant help of another person.

The Draft Convention also deals with the question of the supply and normal renewal, by the employer or insurer, of such artificial limbs and surgical appliances as are recognized to be necessary. It is left to national laws to make provision for ensuring the payment of compensation in the event of the insolvency of the employer or insurer.

Two Recommendations were adopted by the Conference concerning the minimum scale of compensation and concerning jurisdiction in disputes on workmen's compensation. In the first-mentioned Recommendation the attention of Governments is also drawn to the importance of vocational re-education of injured workmen.

Occupational Diseases

A Draft Convention of occupational diseases adopted by the Conference states that compensation will be paid in respect of poisoning by lead (its compounds and alloys), mercury (its compounds and amalgams), and anthrax infection. A list is given of industries, employment in which is held to afford a presumption that the disease is due to the employment in question.

By a recommendation on the same subject States are requested to institute some procedure to facilitate the addition from time to time of further diseases to the schedule given in Article 2 of the Convention.

A Resolution was adopted by the Conference recommending that the International Labour Office should study the question of

occupational diseases in order that the fullest possible information should be communicated to the governments of the various countries which are members of the International Labour Organization.

Social Insurance

The general problems of social insurance were discussed under the following heads: (1) scope of social insurance; (2) benefits; (3) financial resources; (4) financial systems; (5) and (6) social insurance institutions and the unification of social insurance. A number of statements were made by various representatives which provided valuable information on the experience in the different countries regarding social insurance. The Conference decided by unanimous vote to request the Governing Body of the International Labour Office to place the question of general sickness insurance for workers on the Agenda of an early session of the Conference, if possible that of 1927, and on the Agenda of the same or succeeding sessions (due regard being had to the close connection between the various branches of social insurance) the questions of invalidity, old age and widows' and orphans' insurance.

Night work in Bakeries

The Conference adopted at its second reading a Draft Convention which had been provisionally adopted at its first reading the previous year, by which provision is made for the abolition of night work in bakeries. The prohibition of night work applies to all persons, including proprietors as well as workers, but not to members of the same household manufacturing for their own consumption. For the purposes of the Convention the term "night" signifies a period of at least seven consecutive hours and must include the interval between 11 p.m. and 5 a.m. (or, in certain cases, with the consent of the employers' and workers' organizations concerned, the interval between 10 p.m. and 4 a.m.)

Equality of Treatment of Foreigners as regards Workmen's Compensation

Another Draft Convention which had passed its first reading at the 1924 Conference was also adopted on its second reading in 1925, viz., a Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents. Each State which ratifies the Convention undertakes to grant to the nationals of any other State ratifying the Convention the same treatment with regard to workmen's compensation, without any condition as to residence.

A Recommendation on this same subject, which has been approved at the 1924 Conference, was also adopted by final vote.

List of Conventions and Recommendations Adopted

Of the five Draft Conventions which were submitted to the Conference, four were adopted on final vote by substantial majorities. This is the first time since 1921 that the list of Conventions has been augmented. Four Recommendations were also passed. Following is a list of Conventions and Recommendations which were adopted by the Conference:—

Conventions and Recommendation adopted provisionally in 1924 and submitted for final vote:—

(1) Equality of Treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents.

Convention adopted by 125 to 0. (Test vote, 1924, 85 to 1).

Recommendation adopted by 128 to 0. (Test vote, 1924, 85 to 1).

(2) Night work in Bakeries.

Convention adopted by 81 to 26. (Test vote, 1924, 73 to 15).

Other Conventions and Recommendations:

(3) Workmen's Compensation for Accidents. *Convention adopted, final vote, by 83 to 8.*

Two Recommendations adopted, final votes, 79 to 24; 85 to 18.

(4) Compensation for Occupational Diseases. *Convention adopted, final vote, 89 to 6. Recommendation adopted, final vote, 98 to 3.*

Proposed Convention regarding Glass Manufacturing Defeated

A proposed Draft Convention providing for weekly suspension of work in glass manufacturing processes where tank furnaces are used was passed provisionally in 1924 but did not receive the required two-thirds majority vote in requisite to its final adoption in this year's Conference and, therefore, failed of adoption.

Resolutions adopted

In addition resolutions were adopted on compensation for occupational diseases and on general problems of social insurance as well as on several other questions which did not appear on the formal agenda.

Draft Conventions, Recommendations and Resolutions adopted by International Labour Conference

Text of the Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met in its Seventh Session on 19 May, 1925, and

Having decided upon the adoption of certain proposals with regard to the equality of treatment for national and foreign workers as regards workmen's compensation for accidents, which is included in the second item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention, adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—Each Member of the International Labour Organization, which ratifies this convention, undertakes to grant to the nationals of any other Member, which shall have ratified the convention and who suffer personal injury due to industrial accidents happening in its territory or to their dependants the same treatment in respect of workmen's compensation as it grants to its own nationals.

This equality of treatment shall be guaranteed to foreign workers and their representatives without any condition as to residence. With regard to the payments which a Member or its nationals would have to make outside that Member's territory in the application of this principle the measures to be adopted shall be regulated, if necessary, by special arrangements between the Members concerned.

Article 2.—Special agreement may be made between the Members concerned to provide that compensation for industrial accidents happening to workers whilst temporarily or intermittently employed in the territory of one Member on behalf of an undertaking situated in the territory of another Member shall be governed by the laws and regulations of the latter Member.

Article 3.—The Members who ratify this Convention and who do not already possess a system whether by insurance or otherwise of workmen's compensation for industrial accidents agree to institute such a system within a period of three years from the date of their ratification.

Article 4.—The Members who ratify this Convention further undertake to afford each other mutual assistance with a view to facilitating the application of the Convention and the execution of their respective laws and regulations on workmen's compensation and to inform the International Labour Office, which shall inform the other Members concerned of any modifica-

tions in the laws and regulations in force on workmen's compensation.

Article 5.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 6.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organisation have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 7.—As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 8.—Subject to the provisions of article 6, each Member which ratifies this Convention agrees to bring the provisions of articles 1, 2, 3 and 4, into operation not later than 1st January, 1927, and to take such action as may be necessary to make these provisions effective.

Article 9.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 10.—A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 11.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or modification.

Article 12.—The French and English texts of this Convention shall both be authentic.

Text of the Recommendation concerning equality of treatment for national and foreign workers as regards workmen's compensation

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to the equality of treatment for national and foreign workers as regards workmen's compensation for accidents, which is included in the second item of the agenda of the Session, and

Having determined that these proposals shall take the form of a Recommendation, adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

I. In order to facilitate the application of the Draft Convention concerning equality of treatment for national and foreign workers as regards workmen's compensation the Conference recommends that:

(a) When a person to whom compensation is due under the laws and regulations of one Member resides in the territory of another Member, the necessary measures be taken to facilitate the payment of such compensation and to ensure the observance of the conditions governing such payment laid down by the said laws and regulations;

(b) In case of dispute concerning the non-payment, cessation of payment, or reduction of the compensation due to a person residing elsewhere than in the territory of the Member where his claim to compensation originated, facilities be afforded for taking pro-

ceedings in the competent courts of law in such territory without requiring the attendance of the person concerned;

(c) Any advantage in respect of exemption from duties and taxes, free issue of official documents or other privileges granted by the law of any Member for purposes connected with workmen's compensation be extended under the same conditions to the nationals of the other Members who shall have ratified the afore-mentioned Convention.

II. The Conference recommends that, where in any country there exists no system, whether by insurance or otherwise, of workmen's compensation for industrial accidents, the Government shall, pending the institution of such a system, afford facilities to alien workers enabling them to benefit by the laws and regulations on workmen's compensation in their own countries.

Text of the Draft Convention concerning night work in bakeries

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to night work in bakeries which is the fourth item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international Convention, adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—Subject to the exceptions hereinafter provided, the making of bread, pastry or other flour confectionery during the night is forbidden.

This prohibition applies to the work of all persons, including proprietors as well as workers, engaged in the making of such products; but it does not apply to the making of such products by members of the same household for their own consumption.

This Convention has no application to the wholesale manufacture of biscuits. Each Member may, after consultation with the employers' and workers' organizations concerned, determine what products are to be included in the term "biscuits" for the purpose of the Convention.

Article 2.—For the purpose of this Convention, the term "night" signifies a period of at least seven consecutive hours. The beginning and end of this period shall be fixed by the competent authority in each country after consultation with the organizations of employers and workers concerned, and the period shall include the interval between eleven o'clock in the evening and five o'clock in the morning. When it is required by the climate or season, or when it is agreed between the employers' and workers' organizations concerned, the interval between ten o'clock in the evening and four o'clock in the morning may be substituted for the interval between eleven o'clock in the evening and five o'clock in the morning.

Article 3.—After consultation with the employers' and the workers' organizations concerned the competent authority in each country may make the following exceptions to the provisions of Article 1:

(a) The permanent exceptions necessary for the execution of preparatory or complementary work as far as it must necessarily be carried on outside the normal hours of work provided that no more than the strictly necessary number of workers and that no young persons under the age of eighteen years shall be employed in such work.

(b) The permanent exceptions necessary for requirements arising from the particular circumstances of the baking industry in tropical countries.

(c) The permanent exceptions necessary for the arrangement of the weekly rest.

(d) The temporary exceptions necessary to enable establishments to deal with unusual pressure of work or national necessities.

Article 4.—Exceptions may also be made to the provisions of Article 1 in case of accident, actual or threatened, or in case of urgent work to be done to machinery or plant, or in case of *force majeure*, but only so far as may be necessary to avoid serious interference with the ordinary working of the undertaking.

Article 5.—Each Member which ratifies this Convention shall take appropriate measures to ensure that the prohibition prescribed in Article 1 is effectively enforced, and shall enable the employers, the workers, and their respective organizations to co-operate in such measures, in conformity with the Recommendation adopted by the International Labour Conference at its Fifth Session (1923).

Article 6.—The provisions of this Convention shall not take effect until 1st January, 1927.

Article 7.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 8.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 9.—As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 10.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 11.—A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Text of the Draft Convention concerning workmen's compensation for accidents

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to workmen's compensation for accidents, which is the first item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—Each Member of the International Labour Organization which ratifies this Convention undertakes to ensure that workmen who suffer personal injury due to an industrial accident, or their dependants, shall be compensated on terms at least equal to those provided by this Convention.

Article 2.—The laws and regulations as to workmen's compensation shall apply to workmen, employees and apprentices employed by any enterprise, undertaking or establishment of whatsoever nature, whether public or private. It shall nevertheless be open to any Member to make such exceptions in its national legislation as it deems necessary in respect of:

(a) persons whose employment is of a casual nature and who are employed otherwise than for the purpose of the employer's trade or business,

(b) out-workers,

(c) members of the employer's family who work exclusively on his behalf and who live in his house,

(d) non-manual workers whose remuneration exceeds a limit to be determined by national law or regulation.

Article 3.—This Convention shall not apply to (1) seamen and fishermen for whom provision shall be made by a later Convention; (2) persons covered by some special scheme, the terms of which are not less favourable than those of the Convention.

Article 4.—This Convention shall not apply to agriculture, in respect of which the Convention concerning workmen's compensation in agriculture adopted by the International Labour Conference at its Third Session remains in force.

Article 5.—The compensation payable to the injured workman, or his dependants, where permanent incapacity or death results from the injury, shall be paid in the form of periodical payments: provided that it may be wholly or partially paid in a lump sum, if the competent authority is satisfied that it will be properly utilized.

Article 6.—In case of incapacity, compensation shall be paid not later than as from the fifth day after the accident, whether it be payable by the employer, the accident insurance institution, or the sickness insurance institution concerned.

Article 7.—In cases where the injury results in incapacity of such a nature that the injured workman must have the constant help of another person, additional compensation shall be provided.

Article 12.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or modification.

Article 13.—The French and English texts of this Convention shall both be authentic.

Article 8.—The national laws or regulations shall prescribe such measures of supervision and methods of review as are deemed necessary.

Article 9.—Injured workmen shall be entitled to medical aid and to such surgical and pharmaceutical aid as is recognized to be necessary in consequence of accidents, the cost of such aid shall be defrayed either by the employer, by accident insurance institutions or invalidity insurance institutions.

Article 10.—Injured workmen shall be entitled to the supply and normal renewal, by the employer or insurer, of such artificial limbs and surgical appliances as are recognized to be necessary; provided that national laws or regulations may allow in exceptional circumstances the supply and renewal of such artificial limbs and appliances, to be replaced by the award to the injured workman of a sum representing the probable cost or the supply and renewal of such appliances, this sum to be decided at the time when the amount of compensation is settled or revised.

National laws or regulations shall provide for such supervisory measures as are necessary, either to prevent abuses in connection with the renewal of appliances, or to ensure that the additional compensation is utilized for this purpose.

Article 11.—The national laws or regulations shall make such provision as, having regard to national circumstances, is deemed most suitable for ensuring in all circumstances, in the event of the insolvency of the employer or insurer, the payment of compensation to workmen who suffer personal injury due to industrial accidents, or in case of death, to their dependants.

Article 12.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 13.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 14.—As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 15.—Subject to the provisions of Article 13, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6, 7, 8, 9, 10 and 11, into operation not later than 1st January, 1927, and to take such action as may be necessary to make these provisions effective.

Article 16.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 17.—A Member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for regis-

tration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 18.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or modification.

Article 19.—The French and English texts of this Convention shall both be authentic.

Text of the Recommendation concerning jurisdiction in disputes on workmen's compensation

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to jurisdiction in disputes on workmen's compensation, the first item on the agenda of the Session, and

Having determined that these proposals should take the form of a Recommendation, adopts the following Recommendation, to be submitted to the International Labour Organization for consideration with a view to effect being given to it by national Legislation or otherwise in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:—

Whereas disputes on workmen's compensation turn not only on the interpretation of laws and regulations but also on questions of an occupational character, requiring a thorough knowledge of working conditions, e.g. questions as to the nature of the undertaking, the kind of risk inherent in it, the relation between the workman's employment and the accident, the method of computing earnings, the degree of incapacity for work, the possibility of the workman's adapting himself to some other occupation, etc.; and

Whereas workmen and employers have the necessary knowledge and experience on these questions, and

disputes on compensation matters might be more equitably settled if they were Members of or associated with the courts which have to decide such disputes; and

Whereas it is possible in many countries to secure the association of employers and workmen with such courts as Members of or otherwise without departing radically from the existing judicial system;

The General Conference recommends that each Member of the International Labour Organization should take the following principles and rules into consideration:

I. That every dispute relating to workmen's compensation should preferably be dealt with by a special court or board of arbitration, comprising with or without the addition of regular judges, an equal number of employers' and workmen's representatives appointed to act as adjudicators by their respective organizations or on the nomination of such organizations, comprising employers' and workers' representatives drawn from other social institutions or elected by separate electoral bodies of employers and workers.

II. That, where disputes relating to workmen's compensation are dealt with by the ordinary courts of law, such courts shall be required, on the request of either of the parties concerned, to hear employers' and workmen's representatives as experts in any case where the dispute involves a question of an occupational character, and in particular the question of the degree of incapacity for work.

Text of the Recommendation concerning the minimum scale of workmen's compensation

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to the minimum scale of workmen's compensation, the first item in the agenda of the Session, and

Having determined that these proposals should take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

The General Conference recommends that each Member of the International Labour Organization should take the following principles and rules into consideration:—

I. Where incapacity for work results from the injury, the national laws or regulations should provide for the payment of compensation at rates not lower than those hereinafter indicated;

(1) In case of permanent total incapacity, a periodical payment equivalent to two-thirds of the workman's annual earnings;

(2) In case of permanent partial incapacity, a proportion of the periodical payment payable in the event of permanent total incapacity calculated in reference to the reduction of earning power caused by the injury;

(3) In case of temporary total incapacity, a daily or weekly payment equivalent to two-thirds of the workman's basic earnings as calculated for purposes of compensation;

(4) In case of temporary partial incapacity, a proportion of the daily or weekly payment payable in the case of temporary total incapacity calculated in reference to the reduction of earning power caused by the injury.

Where compensation is paid in a lump sum, the sum should not be less than the capitalized value of the periodical payment which would be payable under the foregoing paragraphs.

II. Where the injury is such that the workman requires the constant help of another person, additional compensation should be paid to the workman which should not be less than half the amount payable in the case of permanent total incapacity.

III. Where death results from the injury, those entitled to be regarded as dependants for purposes of compensation should include at least the following:—

(1) deceased's husband or wife;

(2) deceased's children under 18 years of age, or above that age if by reason of physical or mental infirmity they are incapable of earning;

(3) deceased's ascendants (parents or grandparents), provided that they are without means of subsistence and were dependent on the deceased or the deceased was under an obligation to contribute towards their maintenance;

(4) deceased's grandchildren and brothers and sisters;

(a) if below 18 years of age, or above that age if by reason of physical or mental infirmity they are incapable of earning, and

(b) if they are orphans, or if their parents, though still living, are incapable of providing for them.

Where compensation is paid as an annual pension, the maximum total of the pensions payable to all the dependants should not be less than two-thirds of the deceased's annual earnings.

Where compensation is paid in a lump sum, the maximum sum payable to all the dependents should not be less than the capitalized value of a periodical payment equivalent to two-thirds of the deceased's annual earnings.

IV. Vocational re-education of injured workmen should be provided by such means as the national laws or regulations deem most suitable.

Governments should encourage institutions which undertake such re-education.

Text of the Draft Convention concerning workmen's compensation for occupational diseases

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met in its Seventh Session on 19th May, 1925, and having decided upon the adoption of certain proposals with regard to workmen's compensation for occupational diseases, which is the first item on the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:

Article 1.—Each Member of the International Labour Organization which ratifies this Convention undertakes to provide that compensation shall be payable to workmen incapacitated by occupational diseases, or in case of death from such diseases to their dependents, in accordance with the general principles of the national legislation relating to compensation for industrial accidents. The rates of such compensation shall be not less than those prescribed by the national legislation for injury resulting from industrial accidents. Subject to this provision, each Member in determining in its national law or regulations the conditions under which compensation for the said diseases shall be payable and in applying to the said diseases its legislation in regard to compensation for industrial accidents may make such modifications and adaptations as it thinks expedient.

Article 2.—Each Member of the International Labour Organization which ratifies this Convention undertakes to consider as occupational diseases those diseases and poisonings produced by the substances set forth in the list appended hereto, when such diseases or such poisonings affect workers engaged in the trades or industries placed opposite in the list appended hereto, and result from occupation in an undertaking covered by national legislation.

SCHEDULE

<i>List of diseases and toxic substances</i>	<i>List of corresponding industries and processes</i>
--	---

Poisoning by lead, its alloys or compounds and their sequelae.	Handling of ore containing lead, including fine shot in zinc factories. Casting of old zinc and lead in ingots. Manufacture of articles made of cast lead or of lead alloys. Employment in the polygraphic industries. Manufacture of lead compounds. Manufacture and repair of electric accumulators. Preparation and use of enamels containing lead.
--	--

Poisoning by lead,
—Con.

Polishing by means of lead files or putty powder with a lead content.

All painting operations involving the preparation and manipulation of coating substances, cements or colouring substances containing lead pigments.

Poisoning by mercury, its amalgams and compounds and their sequelae.

Handling of mercury ore.
Manufacture of mercury compounds.

Manufacture of measuring and laboratory apparatus.

Preparation of raw material for the hat-making industry.

Hot gilding.

Use of mercury pumps in the manufacture of incandescent lamps.

Manufacture of fulminate of mercury primers.

Anthrax infection

Work in connection with animals infected with anthrax.

Handling of animal carcasses or parts of such carcasses including hides, hoofs and horns.

Loading and unloading or transport of merchandise.

Article 3.—The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

Article 4.—This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

Article 5.—As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

Article 6.—Subject to the provisions of Article 4, each Member which ratifies this Convention agrees to bring the provisions of Articles 1 and 2 into operation not later than 1st January, 1927, and to take such action as may be necessary to make these provisions effective.

Article 7.—Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

Article 8.—A Member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for regis-

tration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

Article 9.—At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or modification.

Article 10.—The French and English texts of this Convention shall both be authentic.

Recommendation concerning workmen's compensation for occupational diseases submitted by the Drafting Committee

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Seventh Session on 19th May, 1925, and

Having decided upon the adoption of certain proposals with regard to workmen's compensation for occupational diseases, the first item in the agenda of the Session, and

Having determined that these proposals should take the form of Recommendation,

adopts the following recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise

in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace:—

Whereas it is recognized that each State is free to establish under its national legislation a more complete list than that embodied in the Schedule appended to Article 2 of the Draft Convention concerning workmen's compensation for occupational diseases,

The Conference recommends that:

Each Member of the International Labour Organization which ratifies this Convention should adopt, where such procedure does not already exist, a simple procedure by which the list of diseases considered occupational in its national legislation may be revised.

Resolution concerning compensation for occupational diseases

Whereas the list contained in the Schedule in Article 2 of the Convention concerning compensation for occupational diseases has been limited to a minimum of occupational diseases recognized as such in an absolutely general manner,

But whereas on the other hand it would seem desirable to complete subsequently this list by the addition of such diseases as shall come to be similarly recognized as meriting inclusion therein,

The Conference recommends that:

1. The International Labour Organization should study the question of occupational diseases and collect the fullest possible information on this subject;

2. The result of such study be communicated to the States Members of the International Labour Organization;

3. The Governing Body be instructed to insert, should the necessity arise, on the Agenda of a future Conference, and if possible in 1926 a new and additional proposed Draft Convention containing the list of occupational diseases which would seem to merit addition to those embodied in the Schedule of Article 2 of the original Convention.

Resolution concerning social insurance

Whereas the maintenance of a healthy and vigorous labour supply is of capital importance, not only for wage-earners themselves, but also for industrial communities desirous of developing their productive capacity,

And whereas this development is only attainable by constant and systematic endeavour to obviate all avoidable loss or diminution in the efficiency or earning capacity of wage earners,

And whereas a system of labour regulation, if true to the principle of social justice, must secure the effective protection of the workers against risks endangering their livelihood, or that of their families,

And whereas this protection can best be attained by means of the establishment of a system of social insurance granting clearly defined rights to the beneficiaries;

The General Conference of the International Labour Organization, having noted that

several States have secured their working class population against occupational and non-occupational risks by establishing systems of social insurance covering almost all workers and their families, and that these systems

(1) give to insured persons the right, when the risks materialize, to claim benefits by way of payments in

kind and in money, enabling them to resume their place in the productive life of the community, or failing this assuring them and their families, if not full compensation for the damage sustained, at least a reasonable minimum standard of life as understood in their time and country, or a basis on which to maintain such a standard;

(2) usually derive their income from contributions paid by employers and workers and from grants out of public funds (except in the case of loss resulting from industrial accidents and occupational diseases the responsibility for insurance against which as a rule rests entirely upon employers);

(3) establish through comprehensive mutual insurance institutions administered by the employers and workers directly interested, or by the State in collaboration with them, an organization designed to encourage thrift and to improve the conditions of life of the insured persons;

and desiring not only to remove conditions which may constitute an obstacle to the efforts of Members who desire to expand and improve their system of social insurance, but also to profit by all the valuable experience obtained in various countries, and recalling the decisions taken at previous Sessions, especially those concerning unemployment, employment of women

before and after childbirth and workmen's compensation for industrial accidents,

(1) requests the Governing Body of the International Labour Office to place the question of general sickness insurance for workers on the Agenda of an early Session of the Conference, if possible that of 1927, and on the Agenda of the same or succeeding Sessions (due regard being had to the close connection between the various branches of social insurance) the questions of invalidity, old age and widows' and orphans' insurance;

(2) decides that the useful work already performed by the International Labour Office in collecting information with regard to social insurance should be continued, and should include the collection and distribution of information concerning:

(a) the progress of legislation and regulations regarding all branches of social insurance;

(b) the results obtained in the various countries and for the various branches of social insurance, especially with regard to the classes and number of beneficiaries and insured persons, the nature and extent of the benefits granted, the funds required and the manner of distributing financial responsibility amongst the different classes of contributors, the employment of reserves and the expenses incurred by insurance institutions on account of benefits and costs of administration.

Resolution concerning the standardization of working condition of miners, submitted by Mr. Mertens, Belgian Workers' Delegate

Considering that the Committee of the International Miners' Federation at a meeting held in Brussels on 28th April, 1925, adopted the following resolution:—

Whereas in certain coal-producing countries economic difficulties are such as to lead to continually increasing unemployment among miners and the lowering of their standard of living;

Whereas these economic difficulties arise very largely from competition and commercial rivalry in the international coal market;

Whereas this competition and commercial rivalry is more acute and embittered by reason of the differences in the working conditions existing in the principal coal-producing countries;

The Committee decides that efforts should be made to secure the standardization of working conditions of miners on an international basis.

Since the Committee desires to be fully informed before it formulates definite and concrete proposals, it decides to organize, in agreement with the National Miners' Federations, an international investigation in the principal coal-producing countries. This investigation shall deal with hours of work, annual holidays and wages paid by employers to the various categories of working miners.

The information furnished by the International Labour Office should give in detail as far as possible, for each country and for each risk:

(a) the classes and number of workers covered, i.e. whether independent workers, workers for salaries or wages and others, and also the occupations covered (distinguishing between compulsory and voluntary systems);

(b) similarly the classes and numbers not covered by the systems;

(c) the benefits (i) nature, i.e. in kind or in cash, (ii) amount, (iii) duration, (iv) conditions attached;

(d) how the cost is borne (i) by the State or other public authority, (ii) by the employer, (iii) by the persons covered;

(e) the total annual cost under heads (d)—(i), (ii), and (iii), with the proportion of the workers' and employers' contributions to the wages paid;

(f) precise methods of administration centrally and locally;

(g) the expenditure annually (i) on benefits, (ii) on administration and the numbers who received each kind of benefit, and the economic effects of the system as a whole in each country;

(h) the use of social insurance reserves for the improvement of public health.

In order that the proposed investigation should be as thorough as possible and that the enquiry may be completed with the least possible delay, the Committee also decides to appeal to the International Labour Office for assistance and the co-operation of the means of investigation at its disposal.

Considering that a resolution has been proposed in accordance with the above resolution by Mr. Mertens and submitted in accordance with Article 12, paragraph 7, of the Standing Orders of the Conference;

Whereas it is one of the functions of the International Labour Office as defined by Part XIII of the Treaty of Peace to collect all information upon hours of work, wages, and annual holidays;

And whereas there would be a special value in an international comparative investigation of all the documents already collected by the great public mines administrations, which documents could be still further supplemented by those of the employers' and workers' organizations;

The Conference requests the Governing Body to consider the conditions under which this investigation could be initiated and carried out by the International Labour Office.

Resolution concerning apprenticeship and vocational and technical education, submitted by Mr. Mertens, Belgian Workers' Delegate

Whereas the question of apprenticeship and of vocational and technical education is of capital importance in furthering satisfactory and intensive production throughout the world;

Whereas the Treaty of Peace in the Preamble to Part XIII declares that an improvement in the conditions of labour of the workers is urgently required by the application of a series of measures including "the organization of vocational and technical education and other measures";

And whereas it is therefore consonant with the Treaty of Peace to promote a well-devised organization of

apprenticeship and of vocational and technical education, which should enable young workers to acquire improved and indispensable vocational knowledge;

The Seventh Session of the International Labour Conference invites the Governing Body to instruct the International Labour Office to undertake such preliminary work and necessary investigations as it may deem appropriate with a view to the possible discussion of the question at one of the next following Sessions of the International Labour Conference.

Resolution concerning the study of the conditions of work of agricultural labourers, submitted by M. Bunji Suzuki, Japanese Workers' Delegate

Whereas the Labour Part of the Treaties of Peace provides not only for the protection of industrial workers, but also for the protection of agricultural workers, and whereas the International Court of Justice has confirmed this intention of the Treaties;

Whereas by virtue of this decision, and of the general principles of the Labour Part, rural workers must be accurately represented in the various bodies of the International Labour Organization;

And whereas the special nature of agricultural labour and the great variety of categories of agricultural workers in every country render the question of their

organization and representation especially difficult and delicate, and whereas it is important to have full knowledge of the facts in order to avoid possible misunderstandings or even disputes;

The Conference requests the Governing Body to instruct the International Labour Office to prepare and submit as early as possible a report showing what are the various categories of agricultural workers in every country and also the principles upon which they are organized and where necessary represented both in their national institutions and in the International Labour Organization.

Resolution concerning an enquiry into conditions of labour in Asiatic Countries, submitted by Mr. Joshi, Indian Workers' Delegate

The Seventh Session of the International Labour Conference expressed the hope that the International Labour Office will continue to collect and publish all available information regarding the conditions of labour in Asiatic countries; and also requests the Governing Body of the International Labour Office, in

consultation with the Governments concerned, to undertake, so far as is possible, a documentary inquiry into the conditions of labour in those countries, more especially in China, India, Japan, Persia and Siam and in the colonies, protectorates and mandated territories in Asia.

Canadian Appointed on Staff of International Labour Office

Professor Mack Eastman, of the staff of the University of British Columbia, Vancouver, has been appointed to the position in the Research Division of the International Labour Office, which became vacant through the retirement of Dr. W. A. Riddell, on appointment as Dominion of Canada Advisory Officer (League of Nations) in Geneva. The position in question is that of Chief of General Studies, and it is understood that he will have charge of all research undertaken by the International Labour Office which is not now provided for in the other sections which are concerned with industrial hygiene and safety, unemployment, insurance, and emigration. The duties attaching to Professor Eastman's post will, there-

fore, comprise the investigation or preparation of studies on housing, vocational guidance, agriculture, and other subjects.

Governing Body

THE twenty-eighth session of the Governing Body of the International Labour Office was held in Geneva on June 9. The main business was the election of its officers. Mr. A. Fontaine (Government, France) was unanimously re-elected to the chair, which he has occupied continuously since he was appointed chairman of the first Governing Body elected by the Washington Conference in 1919. Mr. Carlier (employers, Belgium) and Mr. Oudegeest (workers, Netherlands) were re-elected vice-chairmen, representing their respective groups.

Canadian Women's Institutes and Public Health

The Federated Women's Institutes of Canada held a joint Dominion and Provincial convention at Victoria, B.C., in June. The aims of the institutes in their public health and child welfare work were summed up by Mrs. V. S. MacLachlan, national convener, in her report in the following passages:—

"The women's institutes of Canada are backing the public health nursing policies of various provincial departments of health throughout Canada. The ultimate objective of these policies must be the establishment by legislation of a provincial health nursing system so that preventable disease shall be prevented, motherhood raised to a position in keeping with its sacred office, and the nation's babies rescued from poverty, ignor-

ance and neglect in which they perish, or in which those who survive are disabled as they cross the threshold of life."

After dealing in detail with the health work in the various provinces the report continued:

"There are a few outstanding features in the provinces which I would like to call to the attention of the institutes:

"Saskatchewan—The nursing housekeepers, maternity benefits.

"New Brunswick—The plan of dividing the province into health districts.

"British Columbia—The plan of having the nurses' salary put on the school rates, grouping the school districts into public health areas."

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JUNE, 1925, AS REPORTED BY EMPLOYERS

THE trend of employment at the beginning of June continued to be upward, the gains being more pronounced than on the same date of last year. What was said in the last issue of the LABOUR GAZETTE may be repeated here, that if employment shows the same movement in the next few weeks as was indicated in the same period of last four years, further improvement was to be looked for at the first of July. Statements were received from 5,943 firms employing 778,951 persons on June 1, 1925, as compared with 749,194 in the preceding month. Reflecting this gain of 29,757 workers, the index number rose from 90.8 on May 1, to 94.5 on the date under review. On June 1, 1924, it stood at 95.2, while at this time in 1923, 1922 and 1921 it was 97.3, 89.2 and 86.6, respectively. The accompanying chart reflects the course of employment since 1923.

With the exception of trade, there were general increases in all groups of industries; those in construction, manufacturing and transportation were most pronounced.

Quebec.—Transportation, construction and manufacturing recorded the greatest improvement, but logging was much more active on account of river driving operations, and quarries and asbestos mines were also busier. Within the manufacturing division, the lumber, pulp and paper, electric current, brewing, tobacco, food and leather industries registered the largest gains. Trade, however, showed a falling off in employment. Returns were tabulated from 1,264 employers having 222,018 persons on pay-roll, or 13,748 more than in their last report. This increase also exceeds that noted on June 1, 1924, when the index number was slightly lower.

Ontario.—Construction and manufacturing showed the most marked expansion; within the latter group the lumber industry gained very considerably and mineral product, building material, electric current, tobacco, rubber and dairying plants made increases, though on a smaller scale than in lumber. Garment, woollen and iron and steel works, on the other

Employment by Provinces

Maritime Provinces.—Seasonal activity in lumber mills and fish canneries accounted for a large share of the increase in manufacturing. Construction and maintenance, especially of public highways, afforded considerably more employment and quarrying was busier. On the other hand, there were further seasonal losses in transportation and logging. An aggregate working force of 67,335 persons was reported by the 553 employers making returns who had 64,519 workers on May 1. This increase of 2,816 persons is much larger than that registered at the beginning of June of last year.

hand, showed seasonal inactivity. Transportation, logging and mining registered increases, which, however, were smaller than at the beginning of May. The staffs of the 2,704 Ontario firms making returns rose from 311,822 on May 1 to 319,006 at the beginning of June. The improvement at this time last year was slightly more extensive and the index number then was above its present level.

Prairie Provinces.—Expansion on a larger scale than on the same date of 1924 was indicated in the Prairie Provinces on June 1, when 5,148 persons were added to the working forces of the 769 employers reporting. They had 99,106 workers. Construction and

maintenance, particularly of road-beds, and railway transportation recorded very marked improvement, while manufacturing was also more active. Trade, logging and coal mining, on the other hand, afforded less employment. Conditions in the three Prairie Provinces were not quite as favourable as at the beginning of June of a year ago.

British Columbia.—The additions to staffs in British Columbia were considerably smaller than those registered in the preceding month, but much more extensive than were the increases noted on June 1, 1924. Statements for the date under review were received from 654 firms, who increased their pay-rolls from 70,625 persons on May 1 to 71,486 at the beginning of June. Manufacturing (especially of iron and steel, lumber and food products), logging and construction reported heightened activity, while mining, shipping and trade were slacker. Employment in British Columbia, as may be seen in the accompanying table, was higher than on the same date of last year or of the year before.

Number employed by the Reporting Employers in January,
1920=100

District	Relative weight	June 1, 1925	May 1, 1925	June 1, 1924	June 1, 1923	June 1, 1922	June 1, 1921
Maritime Provinces...	8.7	90.3	86.6	90.0	93.9	87.4	89.5
Quebec.....	28.5	100.6	94.2	99.9	99.1	88.1	83.4
Ontario.....	41.0	89.8	87.7	92.1	96.8	87.8	84.9
Prairie Provinces.....	12.7	93.1	88.0	94.1	95.5	92.8	91.1
British Columbia.....	9.1	106.5	105.1	103.4	100.4	96.6	93.3
Canada.....	100.	94.5	90.8	95.2	97.3	89.2	86.6

Employment by Cities

Five of the seven cities for which separate tabulations are made—Montreal, Quebec, Ottawa, Hamilton and Winnipeg—recorded heightened activity while in Toronto and Vancouver there were declines.

Montreal.—Employment in Montreal continued to increase, the gain of 4,246 persons registered on June 1 being the largest indicated this year; it was, however, rather smaller than that noted on the same date of 1924, when the index number was very slightly higher. The 693 firms reporting for June 1 had 108,769 employees. Shipping showed pronounced seasonal improvement, while construction and manufacturing were also more active. Within the last named division, electric current, boot, shoe and food factories reported additions to staffs. On the other hand, trade was dull, although it was better than on June 1 of last year.

Quebec.—General increases took place in Quebec, of which those in transportation were most noteworthy. Statements were received from 93 employers whose staffs rose from 8,118 on May 1 to 8,490 at the beginning of June.

Toronto.—There were slight declines in Toronto, mainly on account of seasonal losses in garment factories. Other branches of manufacturing, however, afforded more employment and construction was seasonally active. An aggregate pay-roll of 93,726 persons was employed by the 789 firms making returns; on May 1 they had 93,978 employees. This reduction is smaller than that noted on June 1, 1924, when the index number was slightly lower.

Ottawa.—Further improvement was registered in Ottawa, where 123 employers increased their working forces by 852 persons to 10,430 on the date under review. Lumber mills were decidedly busier and building contractors also reported larger pay-rolls. The gains indicated in Ottawa at the beginning of June of last year were less extensive, but the situation then was rather better.

Hamilton.—In contrast with the unfavourable tendency manifested on June 1, 1924, employment gained in Hamilton on the date under review. The firms reporting, 199 in number, had 25,424 persons in their employ, as compared to 25,060 in the preceding month. Manufacturing generally was more fully employed and construction firms were also busier.

Winnipeg.—Practically no change was recorded in Winnipeg, improvement in manufactures and construction being very nearly offset by losses in trade. The working forces of the 287 employers from whom statistics were tabulated aggregated 24,029, as against 24,002 on May 1. Although a larger increase was noted at the beginning of June of last year, the index number was a little lower than at the same period this year.

Vancouver.—There was a contraction in employment in Vancouver that repeated the downward movement noted on June 1 of 1924, when the decreases were greater. Returns compiled from 232 firms showed that they reduced their working force from 22,824 persons on May 1, to 22,485 on the date under review. Shipping, trade and tin-can factories afforded less employment than at the beginning of May, while there were general but slight gains in other industries. The index number was higher than on the same date of last year.

The following table gives index numbers of employment by cities:—

Number employed by the Reporting Employers in January,
1920=100

City	Relative weight	June 1, 1925	May 1, 1925	June 1, 1924	June 1, 1923	June 1, 1922
Montreal.....	14.0	95.6	91.7	96.2	95.4	85.9
Quebec.....	1.1	95.7	91.9
Toronto.....	12.0	86.7	86.9	85.2	89.9	86.6
Ottawa.....	1.3	100.1	91.8	101.6	109.6
Hamilton.....	3.3	83.9	82.4	83.1	94.6
Winnipeg.....	3.1	85.5	85.4	83.6	87.1	92.9
Vancouver.....	2.9	103.1	104.0	99.3	94.7	97.5

Manufacturing Industries

The tendency in manufacturing as a whole continued to be favourable; although the gains were on a smaller scale than at the beginning of May, they were considerably more than twice as large as on June 1, 1924. The index numbers for the two periods are practically the same. Statements were tabulated from 3,880 manufacturers employing 435,734 operatives, or 8,093 more than in the preceding month; lumber mills, fish canneries and other food preparing or preserving factories, pulp and paper, brewing and tobacco, mineral product, rubber, building material and electric current plants afforded more employment than at the beginning of May. Garment, woollen and chemical works registered the only large reductions in personnel recorded on the date under review.

Animal Products, Edible.—There was continued improvement in all provinces in this industry; the greatest increases were in fish canneries and smoking establishments in the Maritime Provinces, but dairies also gained, especially in Ontario and the Prairie Provinces. The 214 firms making returns had 15,711 employees or 1,483 more than on May 1. Although this expansion was somewhat smaller than that recorded on June 1, 1924, the index number was higher than at that time.

Leather and Products.—The production of leather boots and shoes afforded a greater volume of employment than in the preceding month, but tanneries and miscellaneous leather goods showed declines. The result was a reduction of 37 in the staffs of the 194 reporting manufacturers who employed 15,305 workers on the date under review. There were increases in Quebec and reductions in Ontario. Employment at the beginning of June last year showed an important loss, but the index number then was above its level on June 1 of the present year.

Lumber and Products.—Extension of seasonal operations in lumber mills caused a further large increase in employment in this industry; furniture, match, container and other wood-using factories, however, showed contractions in personnel. Although the improvement on June 1 of this year affected a smaller number of workers than that noted on the same date in 1924, the situation now is rather more favourable. Increased activity was registered in all provinces, the additions to staffs in Ontario being largest. An aggregate pay-roll of 55,378 persons was employed by the 727 firms from whom statistics were received. On May 1 they had 49,442 employees, or 5,936 fewer than on the date under review.

Plant Products, Edible.—Flour and other cereal mills reported curtailment, but sugar refineries and fruit and vegetable canneries were busier. The result was an increase of 102 persons in the staffs of the 316 manufacturers reporting, who had 25,047 workers at the beginning of June. The largest gains were in Quebec. Practically no change in conditions was indicated at the beginning of June of a year ago, when the index number was a little lower.

Pulp and Paper Products.—According to statistics from 458 firms in this division, their pay-rolls rose from 51,157 on May 1 to 51,826 at the beginning of June. Pulp and paper mills in Quebec recorded the bulk of this increase, but printing and publishing establishments were also busier. Larger additions to staffs were noted on June 1, 1924; the index number then stood at 100.6 as compared with 100.9 at the present time.

Rubber Products.—There was an increase of 251 in the number employed by 31 manufacturers of rubber products, who had 12,150 workers on the date under review. Factories in Ontario absorbed practically all these extra workers. At the beginning of June of last year, a minor decline was indicated and employment then was a good deal below its present level.

Textile Products.—The seasonal reductions recorded in the textile industries on June 1 were smaller than on the same date of 1924 or 1923; the index number was over five points higher than at the same time last year, but was slightly lower than in the year before. The firms reporting, numbering 531 employed 68,162 workers on June 1, 1925, as compared with 69,480 in the preceding month. Garment and woollen factories in Ontario registered most of the contraction.

Tobacco, Distilled and Malt Liquors.—Tobacco works and breweries in Quebec and Ontario afforded increased employment. Statements were tabulated from 102 manufacturers having 11,735 operatives, or 403 more than at the beginning of May. This increase greatly exceeds that recorded on June 1, 1924, when the index number was several points lower.

Chemical and Allied Products.—The production of explosives, fireworks, drugs and pharmaceutical preparations, chiefly in Ontario and Quebec, showed a falling off, 285 persons having been released by the 115 firms making returns for the Dominion. They employed 6,229 workers on the date under review. This contraction repeats the downward movement indicated on June 1 of last year, but employment then was in somewhat greater volume.

Clay, Glass and Stone Products.—There were further seasonal gains in factories turning out building materials; brick, tile and cut stone works showed most improvement. All provinces shared in the upward movement. The 116 plants reporting employed 8,936 workers as against 8,345 in the preceding month. This expansion was substantially larger than that noted at the beginning of June, 1924, when the index number was much higher.

Electric Current.—Further increases in activity were shown in electric current plants, 89 of which enlarged their working forces from 11,972 on May 1 to 12,262 on the date under review. There were additions to staff in Quebec and Ontario, with declines in British Columbia. On June 1, 1924, more extensive increases were reported, but the index number then was somewhat below the level of this year.

Iron and Steel Products.—Varying conditions in different divisions of the iron and steel industry resulted in a net loss of 120 persons in the staffs of the 640 manufacturers whose statistics were tabulated. They employed 115,646 workers on June 1. Although this decrease is very appreciably smaller than that registered on the same date of last year, the index number was higher than it is now. Steel shipyards and some other divisions recorded improvement on the date under review that was more than offset by reductions in rolling mills, automobile and railway car shops and foundries. Firms in Ontario and the Prairie Provinces showed curtailment of operations, but there was improvement in British Columbia.

Mineral Products.—Gas, petroleum and baking powder works in Ontario were more fully engaged than in the preceding month. The 76 firms in the Dominion from whom returns were tabulated employed 10,190 workers as compared with 9,834 in their last report. This gain is rather larger than that indicated on the same date of last year, when the level of employment was slightly lower.

Logging

River driving operations, chiefly in Quebec but also in Ontario and British Columbia, caused a net increase in employment in logging. In the Maritime and Prairie Provinces there were further declines. Reports received from 215 employers showed that they enlarged their working force from 18,785 on May 1 to 20,264 at the beginning of June. Although a downward tendency was indicated on June 1, 1924, the situation then was somewhat more favourable.

Mining

Coal.—The production of coal in the Prairie Provinces and British Columbia afforded less employment than in the preceding month, while no change was noted in Nova Scotia. The 92 operators making return had 24,045 workers, or 469 less than in May. Employment in the coal fields is much quieter than early in June of a year ago, in spite of the fact that more extensive contractions were indicated then.

Metallic Ores.—Metallic ore mines, mainly in British Columbia, were slacker, 202 persons being released from the staff of the 46 firms reporting; they had 13,545 employees on June 1. On the same date in 1924, large increases were indicated and employment at that time was on a rather higher level.

Non-Metallic Minerals, other than Coal.—Further marked improvement took place in these industries at the beginning of June, the gains exceeding those reported at the same period in the preceding year. Statements compiled from 76 employers showed that they had 6,304 persons on pay-roll, as compared with 5,552 in the preceding month. While all provinces shared in the upward movement, the gains in the Maritime Provinces and Quebec were most noteworthy.

Communication

There were comparatively small increases on telegraphs and similar declines on telephones, resulting in an increase of 67 persons in the staffs of 168 communication companies,

which had 22,754 employees on June 1. More important gains took place on the same date of last year, but the index numbers for the two periods are practically identical.

Transportation

Street and Electric Railways.—Repeating the movement indicated on June 1, 1924, there was a slight increase in employment in this division on the date under review. A combined working force of 18,807 persons was registered by the 112 reporting employers, who had 18,670 workers at the commencement of May. Improvement in Quebec was partly off-set by losses in Ontario and the Prairie Provinces.

Steam Railways.—Returns were received from 103 employers and divisional superintendents having 73,035 workers, or 2,220 more than in the preceding month. The expansion shown on June 1, 1924, was smaller, but the index number then was a good deal higher. Additions to staffs were indicated in all except the Maritime Provinces; those in the Prairie District were most extensive.

Shipping and Stevedoring.—Summer activity in shipping, chiefly in Quebec, caused a pronounced increase which was partly offset by seasonal reductions in the Maritime Provinces. The improvement taking place on the same date of last year affected a larger number of workers and employment then was in greater volume. An aggregate working force of 14,674 persons was employed by the 61 firms making returns, as against 12,086 on May 1, 1925.

Construction and Maintenance

Building.—General increases were shown in building construction; 307 contractors increased their working forces from 21,468 at the beginning of May, to 23,312 on the date under review. Although this gain was somewhat smaller than that noted in June, 1924, the index number was slightly above its level at that time.

Highways.—One hundred and ten road and highway construction firms increased their working forces by 5,550 persons to 12,778 on the date under review. There were gains in

all provinces, but those in Ontario and east were greater than in the western district. The additions to staffs registered on June 1 of a year ago were on a smaller scale.

Railways.—There were continued important increases in employment in railway construction and maintenance, the improvement being, however, less extensive than on June 1, 1924, when the index number was a few points higher. Statements were compiled from 36 employers having 43,835 employees or 7,762 more than on May 1 of this year. Heightened activity was evident in all provinces, the gains in the Prairie Provinces affecting most workers.

Services

The reopening of summer hotels was largely responsible for an increase of 690 in the staffs of the 167 service firms making returns, although there were also a minor gain in the professional group; 14,138 workers were employed in the service division on June 1, 1925. Rather greater improvement was noted on that date a year ago, but the index number then was lower.

Trade

Retail and wholesale trades were slacker than in the preceding month, although the index number is slightly higher than at the beginning of June of any other year of the record. At this time in 1924, however, increased activity was indicated. The sale force of the 570 trading establishments making returns declined from 56,480 on May 1 to 55,726 at the beginning of the month under review. The largest losses were in Quebec and the Prairie Provinces.

The accompanying table gives index numbers of employment by industries as at the first of June and May, 1925, as compared with June 1 of the last four years. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on June 1, 1925.

Index Numbers of Employment by Industries (Number employed by reporting firms in January, 1920=100)

	*Relative Weight	June 1, 1925	May 1, 1925	June 1, 1924	June 1, 1923	June 1, 1922	June 1, 1921

* The term "relative weight" is explained in the last paragraph of the accompanying text.

EMPLOYMENT OFFICE REPORTS FOR MAY, 1925

THE offices of the Employment Service of Canada reported a slight decline in the volume of business transacted during the month of May, 1925, as compared with April, and also a slight reduction as compared with the corresponding period a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined slightly during May, but remained approximately on the same level as that attained during the same period of 1924. The ratio of vacancies to each 100 applications was 78.8 and 74.3 during the first and second half of May, 1925 in contrast with the ratio of 78.3 and 72.8 during the same periods of 1924. The ratio of placements to each 100 applications during the periods under review was 71.8 and 71.0 as compared with 74.2 and 70.1 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications during the first half of May was 1,648 as compared with 1,688 daily during the preceding period, and with 1,818 daily during the corresponding period of 1924. Applications for work during the latter half of the month registered 1,545 daily, in contrast with 1,524 daily during the latter half of May a year ago. Employers notified the Service of a daily average of 1,298 vacancies during the first half, and 1,149 during the latter half of the month under review, as compared with a daily average of 1,423 and 1,131 vacancies during the month of May, 1924. Vacancies offered to the Service during the latter half of April, 1925, averaged 1,371 daily. The Service effected an average of 1,184 placements daily during the first half of May, of which 798 were in regular employment and 386 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,251 daily and 1,323 daily during the first half of May, 1924. During the latter half of the month under review placements averaged 1,096 daily (732 regular and 364 casual), as compared with an average of 1,068 daily during the corresponding period a year ago.

During May, 1925, the offices of the Service referred 29,751 persons to vacancies and effected a total of 28,533 placements. Of

these the placements in regular employment numbered 19,143, of which 15,567 were of men and 3,576 of women, while placements in casual work totalled 9,390. Opportunities for employment numbered 21,238 for men and 9,412 for women, a total of 30,650. The number of applications for work was 39,953, of which 29,356 were from men and 10,597 from women.

The following table gives the placements effected to date by the offices of the Employment Service:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,685	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (5 months).....	81,398	45,348	126,746

MARITIME PROVINCES

Vacancies listed during May were nearly 20 per cent higher than in April, but about 20 per cent less than during May, 1924. In the latter comparison the most noteworthy declines were in the manufacturing industries and in railway and highway construction, but these reductions were partly offset by increased orders in the logging industry. Placements were 19 per cent higher than in April, but 18 per cent lower than in May, 1924. Increased placements over April were recorded in farming and services, both in Nova Scotia and New Brunswick, increases were also shown in the former province in logging, and in the latter province in construction. Reductions in placements were recorded by Nova Scotia offices in manufacturing, transportation, construction and trade, and by New Brunswick offices in manufacturing. There was a nominal change only in the number of placements effected in other industries. Placements in regular employment during May totalled 303 in Nova Scotia, 234 of men and 69 of women, and 202 in New Brunswick, 132 of men and 70 of women.

QUEBEC

There was an increase of 29 per cent in the number of vacancies listed during May over the preceding month and 18 per cent over the corresponding month of last year. In the former comparison gains in lumber, textile and rubber manufacturing and in building

construction and services were mainly responsible, partly offset by seasonal declines in logging operations. In comparison with May, 1924, increased orders were secured for building construction and household workers. Placements were 60 per cent higher than in April and 17 per cent higher than in May, 1924. Industrial groups, in which most of the placements were effected during the month, were manufacturing industries, 171; logging 146; construction 590; and services 912. Placements in regular employment numbered 1,872, 1,133 of men and 739 of women.

ONTARIO

Opportunities for employment during May were nearly 3 per cent lower than in April, and nearly 9 per cent lower than in the corresponding month of last year. In the latter comparison a reduction in orders for logging and railway construction workers was mainly

ance 1,948 were in railway and 967 in building. Of the placements in the services group, 2,212 were household workers, of whom 1,556 were in casual work only. Placements in regular employment during the month numbered 7,673, of whom 6,606 were male and 1,067 female workers.

MANITOBA

Orders received during May were nearly 29 per cent less than during April and 19 per cent less than during the corresponding month of last year. The decrease in both comparisons was due to a falling-off in farm orders. Placements were 30 per cent lower than in April and 21 per cent less than in May, 1924. Industrial groups in which most of the placements were effected during the month were farming, 571; building construction, 153; trade, 119; and services 1,994, of which 1,481 were household workers, and 78 per cent of

responsible, but was partly offset by the increased orders for transportation workers and workers in the manufacturing industries. Despite the reduction in orders placements were nearly 3 per cent higher than in April and only 7 per cent less than during May, 1924. Placements effected by industrial groups were manufacturing 1,484; logging, 960; farming, 876; transportation, 574; construction and maintenance, 3,311; services, 4,190; trade, 338; and all other, 146. Of the placements under construction and mainten-

these positions in casual work only. Placements effected in regular employment during the month numbered 1,402,819 of men and 583 of women.

SASKATCHEWAN

Vacancies listed during the month of May were 50 per cent less than during April and nearly 22 per cent lower than during the corresponding month of last year. A decrease in farm orders was responsible in both comparisons, this being due to farmers placing their

orders somewhat earlier this year than last, orders received during April being particularly heavy. Placements were nearly 45 per cent less than in April and about 24 per cent less than in May, 1924. Placements effected during the month by industrial groups were farming 1,210; construction and maintenance, 608; services, 846; and all other 179. Total placements in regular employment during May numbered 2,166, of which 1,815 were of men and 351 of women.

ALBERTA

Opportunities for employment during May were nearly 25 per cent less than in April, but almost 17 per cent greater than in May, 1924. Farm orders were responsible for the changes in both comparisons. About the same percentages of change were also recorded in the number of placements effected. Industrial groups in which most of the placements were made were farming, 2,031; construction and maintenance, 681; services, 905; and manufacturing industries, 215. Placements in regular employment during May totalled 3,383, of which 2,969 were of male and 414 of female workers.

BRITISH COLUMBIA

The number of vacancies listed during May were 14 per cent higher than in April, but 5 per cent lower than in the corresponding month of last year. The increases over April were distributed among all the industrial groups except farming, in which slightly less orders were received. Placements were only 1 per cent higher than in April and about 10 per cent less than in May, 1924. The less favourable percentage of change shown in placements as compared with vacancies was due to large shipments of farm hands to the Prairie Provinces in May, 1924, and April of this year, which were not required during the current month. Industrial groups in which placements were effected were manufacturing industries, 499; logging, 386; farming, 194; mining, 80; transportation, 83; construction and maintenance, 880; services, 1,087; trade, 105; all other, 9. Of the placements in manufacturing industries, lumber and its products received 288 workers. There were 2,142 placements in regular employment effected during May, 1,859 of men and 283 of women.

Movement of Labour

During May 1925 the offices of the Employment Service of Canada made 19,143 placements in regular employment of which 11,293 were of persons for whom the employment found was outside the immediate locality of

the offices at which they were registered. Of the latter 1,155 were granted the Employment Service reduced transportation rate, 861 going to points within the same province as the despatching office and 294 to other provinces.

The Quebec offices issued 317 special transportation certificates, 201 of which were granted to persons going to employment within the province, and 116 to other provinces. Of the former, Montreal issued 66 to saw-mill labourers, and Quebec 135 to construction workers, all travelling to points within their own zones. The interprovincial transfers were all for bushmen, 47 being sent by Montreal to Sault Ste. Marie and 69 from Hull to North Bay. The Ontario offices granted 182 special rate certificates, 142 provincial and 40 interprovincial. Of the provincial certificates 112 were for bushmen and saw mill workers, 27 of whom were sent by Sudbury, one by Peterborough, 4 by Fort William and 34 by Port Arthur to points within their respective zones. From Ottawa 9 travelled to Pembroke, from Toronto 11 to North Bay, and from Pembroke 4 to Sudbury, 3 to Port Arthur and 19 to North Bay. The remainder of those making use of the special certificates included one stationary engineer, 1 fire ranger and one cook going from Sudbury, one barber and 6 labourers from Fort William, 4 hotel workers, 4 miners and one construction labourer from Port Arthur to points within their respective zones. Six blasters were sent from Sudbury to Ottawa and from Toronto, one parlour maid to Fort William, one assistant engineer, one survey party man and one carpenter to Port Arthur, and one structural iron worker to Chatham. Of the 40 certificates issued to points outside the province 12 were for river drivers sent to Hull from Pembroke and the remainder were all for farm hands, 19 of whom were travelling to Manitoba and 9 to Saskatchewan. The Manitoba transfers numbered 226 of which 171 were for persons going to points within the province and 55 to other provinces. The Winnipeg office issued all the certificates, and those granted to points within the province were mostly for farm hands and domestic and hotel workers. To the Brandon and Dauphin zones Winnipeg sent 111 farm hands, 13 fishermen, 3 building labourers, 4 saw mill hands, one dumpman, 2 hotel workers and 8 domestics. Certificates for points within the Winnipeg zone were issued to 12 farm hands, 7 hotel workers and 10 domestics. The movement from Winnipeg to points outside the province were made up of 31 farm labourers, 5 household workers, 4 hotel workers and one painter to Saskatchewan offices, 3 farm labourers to Edmonton,

*9 placements effected by offices since closed.

one farm labourer to Medicine Hat, 3 hotel waitresses and one farm housekeeper to Port Arthur and 8 construction labourers to Sudbury. Saskatchewan offices issued 118 special transportation certificates, 112 for points within the province, and 6 to Lethbridge, Alberta. The latter were for 6 sugar beet workers, 2 each being despatched by Estevan, Swift Current and Saskatoon. The provincial transfers included 88 farm workers, 8 domestics, 2 hotel workers, 2 painters, 2 saw-mill hands, 7 teachers, 2 rock pickers and one dumpman, the majority of these going to points in the Moose Jaw, Regina and Saskatoon zones. Alberta offices granted 142 certificates, 132 provincial and 10 interprovincial. Of the former Calgary issued certificates to one farmer, one bushman, one waitress and one domestic to points within the Calgary zone and 73 permits to farm labourers, one kitchen worker and one porter going to the Drumheller, Lethbridge and Edmonton districts. Edmonton placed 47 workers within its own zone, the majority being farm labourers; the movement also included 7 construction, 4 bush and 4 domestic workers. In addition Edmonton sent 2 farm hands to Lethbridge, one to Drumheller, and one marble setter to Calgary. Medicine Hat transferred one farm labourer to Edmonton. Of the interprovincial transfers 9 were for farm workers, 8 going to Saskatoon and one to Regina. One blacksmith was sent

by the Edmonton office to North Battleford. From the British Columbia offices 170 certificates were issued, 103 to points within the province and 67 to other provinces. Vancouver transferred 42 farm hands and one household worker to points in Saskatchewan, 11 farm hands, 5 domestics and one engineer to Alberta and two farm hands to Manitoba. Vernon sent one farm hand to Calgary, New Westminster, one to Saskatoon, and Victoria 2 farm hands and one housekeeper to Calgary. Of the provincial movement, Vancouver sent 9 miners, one waiter and one cook to points within its zone, and 58 lumber workers, farm hands, station men, machine miners and engineers to Prince George, Kamloops, Revelstoke, Penticton, Cranbrook, Vernon and Nelson. Prince Rupert sent two saw-mill labourers and one carpenter to points within the zone and one farm labourer to Prince George. Nelson granted certificates to three loggers going to points within that zone. From Prince George 23 bush workers and one cook were despatched to points within the zone and 2 planer-men and one engineer were sent to Prince Rupert.

Of the 1,155 workers who were granted the Employment Service reduced transportation rate 600 were carried by the Canadian National Railway, 546 by the Canadian Pacific Railway and 9 by the Pacific Great Eastern Railway.

BUILDING PERMITS ISSUED DURING MAY, 1925

THERE was a slight increase in the value of the building permits issued in 60 cities during May as compared with April, 1925, and the total was also higher than in the same month of last year, which is the more significant comparison. The building authorized was valued at \$15,296,080 during the month under review; this was \$253,561 or 1.7 per cent higher than the April, 1925, aggregate of \$15,042,519, and \$674,980 or 4.6 per cent above the total for May, 1924, of \$14,621,100.

Some 50 cities furnished detailed statements showing that they issued nearly 1,700 permits for dwellings estimated to cost over \$7,000,000 and about 3,200 permits for other buildings at a proposed cost of more than \$6,600,000.

Ontario, Saskatchewan, Alberta and British Columbia reported increases in the value of the building permits issued as compared with April, 1925. The gain of \$334,637, or 105.7 per cent, in Saskatchewan and of \$1,107,709, or 15.5 per cent, in Ontario were most pro-

nounced. Of the declines in the remaining provinces, those of \$550,209, or 85.5 per cent, in Nova Scotia and of \$394,720, or 90.1 per cent, in New Brunswick were largest.

As compared with May, 1924, Nova Scotia, Ontario, Manitoba and British Columbia recorded improvement. The greatest increase of \$2,363,240, or 40.2 per cent, was in Ontario, although Nova Scotia showed the greatest proportional gain of \$30,160, or 47.7 per cent. In the other provinces there were reductions, of which Alberta reported the most marked. In that province, there was a loss of \$1,175,725, or 71.1 per cent, during the month under review; the total for May, 1924, was exceptionally high, owing to a permit having been issued for the construction of a Dominion government grain elevator at Edmonton.

In Montreal and Winnipeg, there were decreases in the value of the building authorized as compared with April, 1925, and May, 1924; Toronto showed improvement in both com-

parisons, while in Vancouver the total was lower than in the preceding month, but higher than in the same month of last year. New Glasgow, Fredericton, Shawinigan Falls, Chatham, Niagara Falls, Ottawa, Owen Sound, Port Arthur, St. Thomas, Sarnia, Welland, Ford, Sandwich, St. Boniface, Regina, Prince Rupert and South Vancouver registered larger aggregates of permits issued than in either April, 1925, or May, 1924.

The value of the building permits issued in the first five months of this year was \$50,-011,236, as compared with \$45,890,525 in the same period of 1924, \$57,852,503 in 1923, \$53,-918,812 in 1922, \$41,320,556 in 1921 and \$47,-574,581 in 1920. There was, therefore, an in-

crease of 9.0 per cent as compared with 1924, a decrease of 13.6 per cent as compared with 1923 and of 7.2 per cent as compared with 1922, and increases of 21.0 per cent and 5.1 per cent as compared with 1921 and 1920, respectively. The Bureau's weighted index number of wholesale prices of building materials averaged 154.1 during the first five months of this year, as compared with 166.0, 165.7 166.1, 200.8 and 215.9 in 1924, 1923, 1922, 1921 and 1920, respectively.

The accompanying table gives the value of the building permits issued in 60 cities during May and April, 1925, and May, 1924. The 35 cities for which records are available since 1910 are marked with asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED BY BUILDING PERMITS

A Trades and Labour Conference has recently been held at Adelaide, in South Australia, the chief object of which was to link up together the political and trade union bodies representing Australian Labour. This would make possible the formulation of a comprehensive policy embracing the whole of Australia. The delegates declared that the predominance of Labour governments in Aus-

tralia at the present time (only Victoria has a non-Labour Government) pointed to its being a suitable moment for the socialisation of industries, and they considered the formation of a powerful federation. The immediate proposals under discussion were:—(1) the appointment of a Supreme Labour Council; (2) a pan-Pacific Conference; (3) the legal establishment of a 44-hour week; (4) future international conferences.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing—Clothing

MONTREAL, QUEBEC.—THE HAT AND CAP MANUFACTURERS OF MONTREAL AND THE UNITED CLOTH HAT AND CAP MAKERS OF NORTH AMERICA, LOCAL No. 33.

Agreement to be in effect from August 1, 1924, until July 31, 1925.

Only union members are to be employed. Application shall be made to union for help, and after one week same may be obtained elsewhere. If non-union such helpers must join union within four weeks.

The trial period for newly engaged workers shall not exceed two weeks.

Hours per week, 44; overtime, time and one quarter. All work to be on the weekly system.

In dull period work is to be divided equally among employees. Claims of discrimination are to be taken up by the Board of Adjustment, who shall also attend to disagreements over discharge.

No strikes or lockouts during this agreement. Disagreements are to be taken up by the Board of Adjustment. There shall be no change in wages during period of agreement.

MONTREAL, QUEBEC.—CERTAIN LOCAL FIRMS AND THE INTERNATIONAL LADIES' GARMENT WORKERS' UNION (CLOAK AND SUIT MAKERS' UNION) OPERATORS AND FINISHERS' LOCAL No. 13, CUTTERS' LOCAL, No. 19; PRESSERS' LOCAL No. 61.

Agreement to be in effect from May 19, 1925, until January 15, 1928.

Only good standing members are to be employed. The employer shall maintain a union shop during the life of the agreement, being one that employs not less than 8 operators and sufficient workers in other branches, and complies with union standards and conditions. There shall be a shop chairman to represent the employees. An authorized officer of the union may investigate shop conditions.

Hours: forty-four per week; no overtime in shops when full capacity of workers is not employed, or

when workers are out of employment, except to complete work for immediate shipment. Overtime not to exceed 8 hours in any week nor two hours in any day, and to be restricted to first five days of week. Additional overtime in cases of emergency.

Minimum wages per week: cloak and dress cutters, \$42; pressers, \$44; under pressers, \$39; tailors, \$30. In factories on weekly basis, operators, \$44; finishers, \$25; button sewers, \$16; on piece work, the above shall be basis for prices.

The employees shall name a price committee to fix piece work prices with the management.

The employer shall not enter into individual agreement with any employee.

No contracting or sub-manufacturing work in the shop shall be permitted; no work may be taken home.

The employer shall not deal with manufacturers, contractors or jobbers where a strike is being conducted.

It is agreed that a Joint Board of Sanitary Control shall be established in the cloak industry of Montreal; Board to be composed of an equal number of the employers, the union, and the public, the object being to work out a code of sanitation for the cloak industry, abolishing the present unsanitary conditions.

The union label is to be adopted.

Workers are not to be discharged for misconduct without notice in writing.

Complaints and grievances are to be submitted in writing. The employer and representatives of the union shall jointly investigate the complaints. Decisions shall be binding. If parties fail to agree they shall refer matter to an impartial chairman, who may order an investigation.

Manufacturing—Pulp, Paper and Paper Goods

PORT ARTHUR, ONTARIO.—THE PORT ARTHUR DIVISION, PROVINCIAL PAPER MILLS, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS.

Agreement effective from May 1, 1924, until April 30, 1925, as summarized in the *LABOUR GAZETTE* for July, 1924, has been renewed, to be effective until April 30, 1925.

1926

SAULT STE. MARIE, ESPANOLA AND STURGEON FALLS, ONTARIO.—THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND LOCALS OF THE INTERNATIONAL BROTHERHOOD OF PAPERMAKERS.

The agreement of May 1, 1924, is to remain in force from May 1, 1925, to May 1, 1926, with certain alterations.

Minimum speed classification for each paper machine is hereby set. Above this minimum speed rates of pay shall increase or decrease according to the paper-makers' standard classification.

Minimum rates, per hour—Paper Machine Room—Paper Makers' schedule dated 1923 to apply above these speeds: Soo: Boss Machine tender, \$1.64; machine tender, minimum speed 650, per hour, \$1.24, \$1.19, \$1.07; back tender, \$1.12, \$1.03, 88 cents, 3rd hand, 78 cents, 76 cents, 71 cents.

Espanola: Boss machine tender, \$1.50, \$1.39, \$1.29. Machine tender, minimum speed 650, \$1.09, 95 cents; back tender, 91 cents, 76 cents; 3rd hand, 73 cents, 65 cents. Sturgeon Falls: boss machine tender, \$1.27; machine tender, minimum speed 650, \$1.07; minimum speed 500, 93 cents; back tender, 88 cents, 75 cents, 3rd hand, 71 cents, 65 cents.

When on hanging, news rate at which machine was running plus five cents shall be paid.

SAULT STE. MARIE, ESPANOLA, STURGEON FALLS, ONTARIO.—THE SPANISH RIVER PULP AND PAPER MILLS, LIMITED, AND THE LOCALS OF SEVERAL INTERNATIONAL UNIONS.

The agreement of May 1, 1924, is to remain in force from May 1, 1925, to May 1, 1926, with certain alterations.

Head riverman, Sturgeon Falls, 47 cents per hour; the two occupations wood handler and block handler combined and called wood loader; tour foreman, wet press sulphite at Sturgeon Falls, 69 cents; weighers at Sturgeon Falls, 50 cents; car cleaner, finishing room, changed to car preparer; weigher helper, Sturgeon Falls, eliminated, and a new occupation, car loader and inspector, added at 50 cents per hour; tour foremen, boiler house, at Sturgeon Falls, 70 cents; steam engineers, Espanola, 77 cents; saw filer at Sturgeon Falls added; the following occupations added to the Mechanical Department: wood room millwright and helper, wet press millwright and paper mill pipe fitter, the last two to Sturgeon Falls only.

Manufacturing—Printing and Publishing

MONTREAL, QUEBEC.—FRENCH NEWSPAPER PUBLISHERS AND JACQUES CARTIER LOCAL NO. 145 OF INTERNATIONAL TYPOGRAPHICAL UNION.

Agreement in effect from September 15, 1924, until September 15, 1927.

Only union members to be employed. Learners on composing machines must be typographical workers. Equal pay for equal work for men and women.

Hours, 43 per week; for evening papers, between 7 a.m. and 6 p.m. Night work, 45 hours, between 7 p.m. and 6 a.m.

Overtime, time and one-half and double time. Holiday work, double time for New Year's Day, Epiphany, Ascension Day, Labour Day, All Saints' Day, the Immaculate Conception, Christmas Day, and St. John the Baptist's Day if declared a legal holiday by the provincial government during the period of this agreement.

Workshops must be kept sanitary.

No office must perform work from or for an office where a strike exists.

Wages per week, journeymen, day work, \$40; night work, \$44. Apprentices, from \$14 to \$28.50. Apprentices will be examined by a committee of the union. One apprentice to four journeymen, and one additional for every five additional.

REGINA, SASKATCHEWAN.—NEWSPAPER PROPRIETORS AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 75.

Agreement in effect from May 1, 1925, until April 30, 1927, and for one year more unless 6 months' notice is given.

Scale of wages per week, journeymen, day work, \$44; night work, \$47; apprentices, from \$19 to \$33.50.

Hours, eight per day, seven and one-half per night. Six days or nights per week. Overtime to twelve hours on evening papers and eleven on morning, time and one-half; thereafter, double time. Crew called back for extras shall receive not less than two hours' overtime.

Only union members are to be employed provided they are furnished as requested. Otherwise a firm may secure its own help, which may then be unionized.

One apprentice to four journeymen.

No pooling of hours.

Disputes over wages or conditions shall be settled by a Board of Arbitration of two members from each party and a fifth appointed by them.

Rate on holidays, time and one-half for first three hours; thereafter, double time. On morning papers, 7½ hours' pay for 5 hours' work.

REGINA, SASKATCHEWAN.—JOB OFFICES AND INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, No. 75.

Agreement to be effective from May 1, 1925, until April 30, 1927, and for the following year unless six months' notice is given.

Wage scale per week: foreman in charge of one or two cylinder presses, \$43; in charge of three or more, \$46; in charge of one cylinder and three platen presses, \$43; journeyman pressman operating two cylinder presses, \$40.35; foreman in charge of offset presses, \$46; journeyman offset pressman, \$42; offset assistant, \$31; cylinder assistant, \$29.75; automatic feed operators, \$33; cylinder feeders in combination shop and part time on platens, \$23.50. Platen presses: foreman in charge of one to four platen presses, \$39; in charge of five or more, \$44; journeyman, \$33; feeders, at discretion of the foreman.

Foreman or pressman may operate one cylinder and three platen presses.

Platen foreman or pressman may not operate more than five platen presses, one journeyman to four or fraction thereof.

Those receiving higher wages shall not be reduced under this agreement.

Hours per week, forty-four. Overtime, first three hours, time and one-half; after three hours, double time. Night work, \$3 above day scale.

Only union members are to be employed when union can furnish same. Foremen must be union members; apprentices may be temporarily advanced when there is not sufficient competent help.

Disputes over wages and conditions will be referred to a Board of Arbitration.

Holiday work, first three hours, time and one-half; thereafter, double time. On morning newspapers a night's work of 5 hours shall be paid for as 7 hours' work.

When union fails to supply competent help same may be secured by the employer.

Firms signing the agreement, agree not to do work coming under the jurisdiction of the union for a firm not employing members of the same union; union members not to do same class of work in non-union shops.

VERNON, BRITISH COLUMBIA.—EMPLOYING PRINTERS AND INTERNATIONAL TYPOGRAPHICAL UNION, No. 541.

Agreement in effect for the year 1923 and 1924 and thereafter until terminated by either party by thirty days' notice.

Only union members are to be employed.

Hours per week, forty-four. Overtime, over 8 hours in any one day, or over 4 hours on Saturday, or over 7½ hours if all days are divided equally, time and one-half. Overlapping shifts are to be night rate.

Wages per week—hand compositors, machine operators, and floormen, days, \$37.40; nights, \$40. Foremen and machinist-operators, \$3 extra per week. Overtime and holidays, time and one-half; Sundays, double time.

Machine learners: apprenticeship on machines to be limited to 20 weeks. Wages per week: first, four weeks, \$18; second four, \$21; third four, \$24; fourth four, \$27; last four weeks, \$30 per week. One learner to each office, learners must first be journeymen for three months.

Apprentices: one apprentice to five journeymen; not more than two to an office; provided when apprentice reaches fifth year a junior apprentice may be taken on. Apprentices shall not be less than fifteen years of age and shall serve for five years; they shall not work more hours than journeymen. Apprentices shall be examined by an apprentice committee of the union and the foreman; apprenticeship may be terminated in six months. No apprentice shall leave one office and enter that of another employer without written consent. Apprentices shall be registered by the union secretary.

Disagreements shall be settled by a committee of one from each party and if necessary a chairman appointed by them.

Construction—Buildings and Structures

OTTAWA, ONTARIO.—THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRY, OTTAWA BRANCH, MASONS AND GENERAL CONTRACTORS' SECTION, AND BRICKLAYERS', MASONS' AND PLASTERERS' UNION, LOCAL No. 7.

The agreement in effect from June 1, 1924, until April 30, 1925, as summarized in the LABOUR GAZETTE for August, 1924, was renewed, with an added clause that three months' notice of change must be given after April 30 of any year by party desiring change; otherwise agreement is automatically renewed.

HAMILTON, ONTARIO.—MASTER PLASTERERS' ASSOCIATION AND OPERATIVE PLASTERERS' AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 298.

Agreement to be effective from May 1, 1924, until April 30, 1926.

Wages per hour, \$1.12½; hours per day, eight, with four on Saturday.

Overtime to ten p.m., time and one-half; thereafter and legal holidays, double time.

Car fare and travelling time to be paid one way, outside the Hamilton Street Railway.

Foremen and men in charge are to receive not less than one dollar a day additional wage.

A firm in business for one year and employing two or more plasterers shall be allowed one apprentice whose indenture shall be four years; a second apprentice with eight men. Apprentices must be 17 years or under; they will be given 3 months' trial, and must be indentured.

Members are not to work with employers using plasterers' tools and not qualifying as practical plasterers.

The original contractor shall complete any job for which he has contract, no journeyman plasterer being allowed to work on job except by permission of the contractor.

No two employers who are recognized by the local as individual contractors or employers shall work in conjunction together.

Violations of agreement shall be referred to an Arbitration Board of three from each party, with full power. This committee shall meet every month for the benefit of the trade in general.

HUMBERSTONE, ONTARIO.—TWO LOCAL FIRMS, AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, LOCAL 1168.

Agreement to be effective from June 1, 1925 until May 31, 1926, and thereafter from year to year unless notice of cancellation or change be given on or before February 1.

Hours per day, eight, with four on Saturdays.

Overtime rate, first four hours, time and one-half; thereafter and Sundays and holidays, double time.

Minimum wage, per hour, 80 cents; foremen, 85 cents; foremen must be members of the union.

Apprentices may be employed only with journeymen, one to five journeymen; apprentices may work overtime only when with journeymen, and shall receive overtime rate.

Carpenters in mills or shops on supply work, in factories on maintenance (not construction) work, may work nine hours except Saturday when work shall terminate at noon. Minimum wage per hour, 75 cents.

Employers are to hire only union men when available. If these are not supplied by the union after three days' notice, non-union men may be employed, such having 14 days' notice to become members of the union.

Car fare in excess of ten cents per day is to be paid to men sent outside the city to work.

When a job is sub-let the agreement must be kept. The business agent may visit the job at any time.

Journeymen doing job work for other than a contractor shall receive not less than five cents above minimum rate.

In shifts, second and third shifters shall be paid eight hours' time for seven hours' work, men not working more than one shift in twenty-four hours.

PORT ARTHUR, ONTARIO.—TWIN CITY BUILDING CONTRACTORS AND BRICKLAYERS', MASONS' AND PLASTERERS' INTERNATIONAL UNION, No. 25.

Agreement as previously in effect renewed from May 1, 1925 to April 30, 1926, with three months' notice of change in wage schedule.

Minimum wage per hour, \$1.

Hours per day, 8 with 4 on Saturday; on shift work, not more than 8 hours in 24; on three shifts, eight hours' pay for seven hours' work.

No overtime work or work on Saturday afternoons, Sundays or holidays, except in cases of extreme emergency, when double time shall be paid.

WINDSOR, ONTARIO.—EMPLOYING PLASTERERS' ASSOCIATION AND OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL No. 345.

Agreement summarized in the LABOUR GAZETTE for July, 1923, in effect as from May 1, 1923 until May 1, 1924 was extended to May 1, 1925 and again to May 1, 1926. Rate of wages throughout, \$1.50 per hour.

TORONTO, ONTARIO.—TORONTO SOCIETY OF DOMESTIC SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 46.

Agreement to be in effect from May 10, 1924 until May 10, 1926 and from year to year unless one month's notice of change is given.

Hours, eight per day and four on Saturdays.

Minimum wage per hour, \$1.

Overtime until midnight, time and one-half; thereafter and Sundays and holidays, double time. Absolutely necessary repairs or finishing up a repair job if not taking longer than an hour may be done at regular rate of wages.

Men working out of Toronto shall have fares and board paid; travelling time paid, single time up to 9 p.m. If travelling at night a sleeper is to be provided. In localities where no local union exists the hours of labour may be extended to 10.

Only union members will be employed on work under the local. If local is unable to furnish mechanics they may be hired as required.

No man may work in connection with plumbing, sanitation or city water system, who is not in possession of a city license.

Members may not work for anyone but a member of the society except where such work is not available.

One apprentice or one helper to a journeyman; not more than one improver to be employed on any job unless where there are more than five journeymen; then one additional improver for each five journeymen. Present apprenticeship agreement to remain.

A Joint Conference Board of four from each party will meet each month and will deal with questions dealt with formerly by the Apprentices Board. Grievances will be referred to a Joint Arbitration Board of three from each party with full power to settle grievances and appoint an arbitrator if necessary.

In event of a dispute not being settled or any violation of the agreement, before any definite action is taken the matter must be referred to the General Office of the United Association, no strike, stopping of work or lockout taking place before matter has been investigated.

For any work done outside the boundary of the twin cities, walking time shall be allowed at three miles per hour. No time to be lost when a member is sent from one job to another. In out of town work, transportation shall be paid unless member quits of his own accord.

No member may work for sub-contractor on work taken from building contractor for labour only.

Shop steward shall inspect all scaffolds.

ST. CATHARINES, ONTARIO.—CERTAIN MASTER CARPENTERS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCALS NOS. 38 AND 2632.

Agreement as summarized in the LABOUR GAZETTE for July, 1923 was renewed for one year from May 1, 1924 and again for one year from May 1, 1925.

WINDSOR, ONTARIO.—MASTER PLUMBERS' ASSOCIATION OF THE BORDER CITIES, AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 552.

Agreement of May 1, 1923-May 1, 1924 was summarized in the LABOUR GAZETTE for June, 1923, wages per hour being \$1.10. The agreement was renewed as from June 1, 1924 to May 1, 1925 with wages per hour, \$1.15, and was again renewed at the latter rate to April 30, 1926.

WINDSOR, ONTARIO.—GENERAL CONTRACTORS OF ESSEX COUNTY AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL No. 494.

Agreement to be in effect from June 11, 1925 until April 1, 1926.

Wages per hour, until November 1, \$1; after November 1, wages shall be decreased as agreed upon by a commission consisting of business agent of union, secretary of employers, and if need be, a third party agreed to by them.

If a member is discharged by three contractors for incompetency, he shall be deemed expelled from the union insofar as the contractors are concerned. If union can furnish skilled mechanics, contractors will give union preference.

Hours, 8 per day; 4 on Saturday.

Overtime, 1st 4 hours, time and one-half; thereafter and Sundays and holidays, double time.

Pay day to be weekly.

REGINA, SASKATCHEWAN.—ASSOCIATION OF DOMESTIC SANITARY AND HEATING ENGINEERS AND UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL No. 179.

Agreement effective from May 1, 1923 until April 30, 1925 and from year to year until notice is given.

Hours of labour, eight per day and four on Saturdays.

Overtime, from 5 p.m. until midnight and from noon on Saturdays, time and one-half; thereafter and Sundays and holidays, double time.

Minimum wage per hour, journeymen, 90 cents.

Men sent out of town are to have fare and board paid; travelling time to be paid; sleeper provided if necessary.

Men working out of town where there is no local union may work ten hours single time per day.

No member of the union may work at trade for anyone but a registered employing plumber. No employing plumber shall employ any but union members or men eligible to become so. All employees are to be covered by insurance as per the Provincial Act.

Not more than one apprentice to every three journeymen; no fitter to have more than one helper.

Plumbing shall be installed in strict accordance with the by-law of the locality.

Grievances shall be referred to a committee of three local employers and three journeymen, with power to settle grievances. No journeymen shall be dismissed until committee shall have met and rendered decision. This committee shall also consider such matters as changing the agreement.

CALGARY, ALBERTA.—CALGARY CONTRACTORS AND UNITED BROTHERHOOD OF CARPENTERS AND JOINERS.

Agreement as in effect from May 1, 1924 to April 30, 1925, and summarized in the LABOUR GAZETTE for March, 1924, again effective as from May 1, 1925 to April 30, 1926.

VANCOUVER, BRITISH COLUMBIA.—TRADE RULES OF PILE DRIVERS, BRIDGE, DOCK AND WHARF BUILDERS OF BRITISH COLUMBIA, CHARTERED BY THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA.

Verbally agreed upon and in effect as from January 1, 1925.

Hours of work, eight per day and four on Saturday; all time outside of hours to be overtime, and paid

double time. No rearrangement of hours will be permitted or evasion of the 8-hour day and the 44-hour week.

On road jobs outside a radius of 25 miles from Victoria or Vancouver, 48 hours shall constitute a week's work except in cities.

In work of two or more shifts, $7\frac{1}{2}$ hours at 8 hours' pay. Double time for work in more than one shift in 24 hours. In case of more than one shift being worked, 4 hours to be worked on Saturday.

Wages, per hour—Pile drivers—foremen, \$1.12 $\frac{1}{2}$; boom-men, 93 $\frac{1}{2}$ cents; crew, bridgemen, wharf carpenters, 87 $\frac{1}{2}$ cents.

Double time on Saturday afternoons and holidays; no work on Labour Day unless life or property in danger.

Foremen must be union members. Members ordered to report and not put to work shall be paid at least two hours' time unless weather etc. prevents working.

Travelling time and transportation are to be paid for. Provisions made for bedding at camps, or arrangements for board and room. The steward shall take charge of those injured in accidents.

Sympathetic strikes will not be considered a violation of rules. Members will not work in an open shop with non-union men, or under police protection or where an injunction has been issued against maintaining union principles. No bonus system or piece-work.

VANCOUVER, BRITISH COLUMBIA.—INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL 844.

Working rules, accepted verbally by certain employers, and in effect from April 1, 1925.

Hours per day, eight. Overtime, time and one-half; Sundays and holidays, double time; no work on Labour Day except to save life or property. Transportation and travelling time to be paid. An hour's time to be allowed for raising steam.

Scale of wages—steam shovel, drag lines, dredges and ditchers: engineers, \$200 per month and board; cranesmen, \$150 per month and board; firemen, \$110 per month and board; watchmen, \$95 per month and board. Where board is not furnished \$45 per month will be allowed.

Per day, clam shell, orange peel, derrick, pile drivers, locomotive-crane and aerial cable engineers, \$8; concrete mixers, pulsometers, pumps, tower hoists, dinkey and road roller engineers, \$7 per day. All unspecified work—minimum of \$7 per day. Firemen and oilers, per hour, 62 $\frac{1}{2}$ cents.

No deviation from rules except by permission of the business agent or local secretary.

No member may take charge of boiler for a non-union engineer. Engineers on steel construction are to be paid union workers' scale. An engineer laid off shall be paid for at least a quarter of a day. Business agent to be allowed on the job. Engineers leaving positions must notify business agent. Hours per week on building work 44. Members may not break in a non-union man without permission of the local.

Transportation and Public Utilities— Street and Electric Railways

SASKATOON, SASKATCHEWAN.—CIVIC BY-LAW TO REGULATE RATES OF WAGES, WORKING HOURS AND OTHER MATTERS RESPECTING THE MUNICIPAL STREET RAILWAY OF THE CITY OF SASKATOON.

To be effective from June 8, 1925 until January 1, 1926.

The following insertions were made in the by-law as in effect for the previous years: Motor conductors temporarily employed or any motor conductor granted leave for more than 30 days in 1924 may have one day's holiday for each 25 days worked in the previous year, not to exceed 12 days in any one year. This applies also to employees in the mechanical department.

The following rates of wages have been added: per hour—welders, 80 cents; armature winders, 77 $\frac{1}{2}$ cents; senior pitman, 63 cents; night foreman, \$140 per month.

Transportation and Public Utilities— Water Transportation

AMHERSTBURG, ONTARIO.—DREDGE OWNERS AND INTERNATIONAL SURFACE ROCK AND DRILL BOAT WORKERS' ASSOCIATION, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION.

Agreement to be in effect from April 1, 1925 until March 31, 1926.

Wage scale was agreed upon as under terms of an existing agreement entered into from April 1, 1919, as summarized in the LABOUR GAZETTE for November, 1920.

The wage scale is as follows, per day: licensed engineer, blaster, \$7.12; driller, blacksmith, \$6.87; fireman, \$6.37; driller's helper, blacksmith's helper, \$6.02. Overtime, time and one-half for actual time worked.

VICTORIA, BRITISH COLUMBIA.—SCHEDULE OF WAGES AND WORKING CONDITIONS FOR DEEP SEA WORK IN THE PORT OF VICTORIA AND PORTS SERVED BY LABOUR FROM VICTORIA.

In effect from October 1, 1924.

Wages per hour, 80 cents; overtime, \$1.20. Ten cents extra per hour for double winch drivers; donkey drivers; hatch tenders; siderunners; holdmen and winch drivers working on lumber and piles from water; on creosoted products; on coal, ballast, ore, sulphur, bulk grain, fertilizer, bone dust, lime, cement in bags, and nitrate in lots of 50 tons or over; on sacks weighing 125 pounds or over in lots of 50 tons or over; to men actually working in refrigerators or below deck with refrigerators when cargo is being discharged or loaded.

Twenty cents per hour above the base wage shall be paid to: boom-men and sling men working on lumber and piles from water. In none of these but the last shall the employer pay a double premium.

Work with high explosive, straight time, \$1.20 per hour; overtime, \$1.80. Rate for damaged cargo, handling part badly damaged or offensive, \$1.20 and \$1.80. Salvage work, \$1.50 straight or overtime; 75 cents straight or overtime while travelling or standing by. Free meals on board when impossible to go ashore.

Straight time: 8 a.m. to 5 p.m. except Sundays and holidays. Men to be enabled to vote on election day.

Special rates are paid for work done during meal hours, and for standing by.

When men are ordered to work at outside points their fare shall be paid and half cost of board and lodging, men's share not to exceed \$1 per day.

Half time for travelling and standing by; for travelling continuously, half straight time rate between 8 a.m. and 5 p.m.

In case of disputes, matter may be referred to arbitration, to a member of the men's organization and one of the employers', and if they fail to agree they shall refer matter to a third party whose decision shall be final; no suspension of work.

FAIR WAGE CONTRACTS, JUNE, 1925

DURING June the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eleven fair wage contracts. Ten of these contracts contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

The remaining contract contains a fair wage schedule, the following clause being included in regard to labour conditions:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any

work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or fail at any time to pay to any employee or employees for any services performed or for any hours of labour wages according to the rates set forth in the schedule or fixed therefor by the Minister of Labour hereunder regarding overtime and classification, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system and the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Construction of a public building at Revelstoke, British Columbia, name of contractor, The Interior Construction Company of Kamloops, British Columbia. Date of contract, May 4, 1925. Amount of contract, \$41,000. The fair wage schedule inserted in the contract is as follows:—

Trade or class of labour	Rate of wages not less than		Hours per day
	\$	cts.	
Bricklayers and masons... Per hour	1	15	8
Carpenters and joiners....	0	80	8
Carters..... " (Driver supplying own horse and cart).	0	75	8
Carters..... " (Driver supplying two horses and wagon).	0	95	8
Concrete workers.....	0	55	8 and 9
Electrical workers.....	0	85	8
Lathers..... Per yard	0	07	
Labourers..... Per hour	0	45	8, 9 and 10
Marble setters.....	1	25	8
Painters and glaziers.....	0	75	8
Plasterers.....	1	25	8
Plumbers and steamfitters	1	00	8
Roofers.....	0	90	8
Sheet metal workers.....	1	00	8
Structural steel workers...	1	00	8
*Terrazzo layers..... Per day		7	00
" " helpers... "	4	00 to 5	00

*Usually this work is done by contract at so much a square yard.

Reconstruction of the River Breakwater for a length of 600 feet at Goderich, Ontario. Name of contractor, Messrs. A. E. Farley, of Ottawa, Ontario, and Percy R. Grant, of Hazeldean, Ontario. Date of contract, June 19, 1925. Amount of contract, unit prices, approximate expenditure, \$17,726.37.

Construction of transformer house at Esquimalt, British Columbia. Name of contractors, Hodgson, King and Marble, of Vancouver, British Columbia. Date of contract, June 18, 1925. Amount of contract, \$8,985.

Construction of mooring wharf at Goderich, Ontario. Name of contractor, Jackson Construction Company, Limited, Sorel, Quebec. Date of contract, June 22, 1925. Amount of contract, unit prices, approximate expenditure, \$21,698.55.

Dredging channels at Bowmanville, Cobourg, Toronto (Eastern Channel), and Toronto (Western Channel), Ontario. Name of contractor, National Sand and Material Company, Limited, Welland, Ontario. Date of contract, May 29, 1925. Amount of contract, Class "B," 52 cents per cubic yard place measure, for Bowmanville; Class "B," 50 cents per cubic yard scow measure, for Cobourg; Class "B," 40 cents per cubic yard, scow measure, for Toronto (Eastern Channel); Class "B," 40 cents per cubic yard, place measure, for Toronto (Western Channel).

Dredging channel at Berthierville, Quebec. Name of contractor, Les Chantiers Manseau of Sorel, Quebec. Date of contract, June 11, 1925. Amount of contract, Class "A" \$5 per cubic yard, scow measure, Class "B" 42 cents per cubic yard, scow measure.

Dredging mooring basin at Lunenburg, Nova Scotia. Name of contractor, Acadia Contractors, Limited, Halifax, Nova Scotia. Date of contract, June 17, 1925. Amount of contract, Class "B," 52 cents per cubic yard, scow measure.

Dredging Harbour at Collingwood, Ontario. Name of contractor, The C. S. Boone Dredging and Construction Company, Limited, Toronto, Ontario. Date of contract, June 20, 1925. Amount of contract, Class "A" \$14.12 per cubic yard, place measure, Class "B" 90 cents per cubic yard, place measure.

Dredging River St. Lawrence, Doucet's Landing, Quebec. Name of contractor, The National Dock and Dredging Corporation, Limited, Quebec, Quebec. Date of contract, June 18, 1925. Amount of contract, Class "A" \$8 per cubic yard, scow measure. Class "B" 49 cents per cubic yard, scow measure.

Dredging Harbour and Channel at Goderich, Ontario. Name of contractor, W. L. Forrest, Goderich, Ontario. Date of contract, June 20, 1925. Amount of contract, Class "A" \$3.17 per cubic yard, scow measure. Class "B" 45 cents per cubic yard, scow measure.

Dredging channel and between entrance piers at Kincardine, Ontario. Name of contractors, The Randolph Macdonald Company, Limited, of Toronto, Ontario. Date of contract, June 23, 1925. Amount of contract, Class "A" \$5 per cubic yard, scow measure. Class "B" 53 cents per cubic yard, scow measure.

POST OFFICE DEPARTMENT

The following is a statement of payments made in June, 1925, for supplies ordered by the Post Office Department, subject to the regulation for the suppression of the sweating system; the securing of payment to working men and women of fair wages, and the performance of work under proper sanitary conditions:—

Nature of orders	Amount of orders	
	\$	cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals.....	661	82
Making and repairing rubber stamps, daters, etc.	204	37
Making up and supplying letter carriers' uniforms, etc.....	7,782	73
Stamping pads, ink, etc.....	475	07
Mail bag fittings.....	11,257	50
Scales.....	26	00

Mr. J. H. Turner, safety inspector at Laurentide, Quebec, in an article appearing in *Pulp and Paper* states that one of the outstanding causes of lost time is the hand tool, through its misuse or lack of attention in keeping it in a proper state of repair. Hand tools should be of sound material and properly fitted on heads; if they become cracked they should not be wired up or replaced. Accidents have been frequently caused through files or tongs having no handles and many eye hazards occur through the use of mushroomed tools. Out-of-condition tools should be handed promptly to the foreman who should see that they are properly repaired or replaced.

About 190 post offices in the Union of South Africa are to be used as subsidiary labour exchanges in towns where no inspector of labour is stationed.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, both the family budget in terms of retail prices and the index number of wholesale prices, however, moved to slightly lower levels.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was \$10.44 at the beginning of June as compared with \$10.48 for May; \$9.86 for June, 1924; \$10.23 for June, 1923; \$10.18 for June, 1922; \$11.16 for June, 1921; \$16.92 for June, 1920 (the peak); \$12.79 for June, 1918; and \$7.49 for June, 1914. Prices of milk, butter, cheese, sugar, potatoes, mutton and pork were slightly lower and the decline in the cost of these items in the budget more than offset the increases in the cost of eggs, beef, bacon, rolled oats, rice and beans. Including the cost of fuel and rent with that of foods, the total budget averaged \$20.67 at the beginning of June as compared with \$20.73 for May; \$20.22 for June, 1924; \$20.72 for June, 1923; \$20.58 for June, 1922; \$21.74 for June, 1921; \$26.81 for June, 1920; \$26.92 for July, 1920 (the peak); \$20.36 for June, 1918; and \$14.27 for June, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, declined slightly to 158.8 for June as compared with 159.1 for May; 152.3 for June, 1924; 155.5 for June, 1923; 152.7 for June, 1922; 164.5 for June, 1921; 255.1 for June, 1920; and 201.7 for June, 1919. Thirty-eight prices quotations were lower, forty-four were higher and 154 were unchanged.

In the grouping according to chief component material five of the eight main groups were higher, two were lower, while one was practically unchanged. The vegetables and Their Products group and the Iron and Its Products group both declined. In the former, declines in the prices of grains, tea and potatoes more than offset the increases in the prices of flour, rubber, foreign fruits, and sugar. The decline in this group was more than sufficient to offset the movement in all the groups which advanced. The groups which rose were: Animals and Their Product due to higher prices for hogs, western cattle and eggs; Fibres, Textiles and Textile Products because of advances in the prices of cotton, silk and

wool; Wood, Wood Products and Paper due to slight increases in ground wood pulp, British Columbia fir and in shingles; Non-Ferrous Metals and Their Products mainly because of higher prices for lead, zinc, and solder; and Non-Metallic Minerals and Their Products because of increases in the prices of gasoline and anthracite coal. The Chemical and Allied Products group was practically unchanged.

In the grouping according to purpose, consumers' goods advanced while producers' goods declined. In the former group prices of flour, coffee, smoked meats, eggs, cheese, sugar, coal and gasoline were higher. In the latter group higher prices for rubber, sugar, flour and textiles were more than offset by the declines in grains, furs, painters' materials, materials for the metal working, the chemical and the meat packing industries.

In the grouping according to origin, raw or partly manufactured goods fell due mainly to the decline in grains, which more than offset the advances in the prices of lemons, raw sugar, rubber, hogs, eggs, coal and textiles. Fully or chiefly manufactured goods advanced, due mostly to higher prices for flour, smoked meats, butter, cheese and gasoline. Domestic farm products and articles of marine origin, were substantially lower, while articles of forest origin advanced slightly. Articles of mineral origin were practically unchanged.

The index number of wholesale prices in Canada published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods and thirty-eight finished or consumers' goods, based upon price levels in 1913 as 100, advanced to 149 for May as compared with 148 for April; 153 for March; and 143 for May, 1924. Grouped by origin, domestic goods advanced while imported goods declined. Grouped by stage of manufacture raw materials rose while both producers' goods and consumers' goods declined. Export goods were substantially higher.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913, and has been calculated by months from 1919 to date for all groupings and from 1913 to

date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for September, 1924.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924; the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods; laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is

potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and the fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Cost of Electric Current for Householders*

With rates in 1913 at 100, index numbers of electric light rates were: 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5.

Retail Prices

Beef prices were again higher in most localities, sirloin steak averaging 29.7 cents per pound in June, as compared with 29.3 cents in May, round steak averaging 24.2 cents per pound in June and 23.8 cents in May. and shoulder roast 16.2 cents per pound in June and 15.8 cents in May. Veal, roast, was up from an average of 17.9 cents per pound in May to 18.3 cents in June. Mutton declined slightly, averaging 29.4 cents per pound, increases in some localities being more than offset by declines in others. Fresh pork, roast, was also slightly lower, averaging 28.2 cents per pound in June as compared with 28.4 cents in May. Salt pork was slightly lower at 25.6 cents per pound. Breakfast bacon rose from an average of 38.6 cents per pound in May to 38.9 cents in June. Boiled ham was slightly higher at an average of 60.7 cents per pound. Both fresh and salt cod fish declined slightly, the former averaging 18.1 cents per pound and the latter 20.8

* LABOUR GAZETTE, December, 1923, page 1442.

cents per pound. Finnan haddie advanced from an average of 19.4 cents per pound in May to 20.4 cents in June. Higher prices were reported from most localities.

Eggs were slightly higher, fresh averaging 35 cents per dozen in June as compared with 34 cents in May and cooking 31.6 cents per dozen in June and 30.3 cents in May. Milk declined from an average of 11.9 cents per quart in May to 11.5 cents in June. Lower prices were reported from New Glasgow, Sherbrooke, Sorel, St. Hyacinthe, St. John's, Brantford, Cobalt, Sault Ste. Marie, Port Arthur, Fort William, Regina, Prince Albert, Moose Jaw, Edmonton, Fernie, New Westminster and Vancouver. Butter prices declined somewhat, dairy averaging 36.1 cents per pound in June as compared with 36.8 cents in May and creamery 40.6 cents per pound in June and 40.9 cents in May. Cheese was down from 31.5 cents per pound in May to 30.7 cents in June. Lower prices were reported from many localities.

An increase in the price of bread was reported from Sorel, Fernie and Vancouver. Flour was unchanged in the average. Soda biscuits were steady. Rolled oats was slightly higher at 6.2 cents per pound. Rice and tapioca showed little change. Canned corn rose from an average of 19.2 cents per can to 19.5 cents. Beans were slightly higher averaging 8.4 cents per pound. Onions showed a general advance, averaging 8.6 cents per pound in June as compared with 5.9 cents in May. Potatoes were slightly lower, averaging \$1.31 per 90 pounds in June as compared with \$1.37 in May. Evaporated apples fell from 20.7 cents per pound in May to 20.5 cents in June. Prunes and raisins showed little change. Raspberry jam was down from an average of 89.7 cents per four pound tin to 88.3 cents. Canned peaches were slightly lower. Marmalade declined from 78.2 cents per four pound tin in May to 77.6 cents in June. Sugar again averaged slightly lower, granulated being 8.5 cents per pound in June as compared with 8.7 cents in May and yellow 8.1 cents per pound in June and 8.3 cents in May. Coffee and tea showed little change.

Anthracite coal was practically unchanged in the average, being \$16.49 per ton. Slightly lower prices were reported from Brockville, Kingston and Owen Sound, while increases were reported from St. Hyacinthe and Peterborough. Bituminous coal showed a slight decline, averaging \$10.12 per ton in June as compared with \$10.25 in May. Hard wood, four feet long, was down from an average of \$12.28 in May to \$12.19 in June. Coal oil was unchanged in the average.

No changes were reported in rent.

Wholesale Prices

The following is a summary of prices changes during the month issued by the Dominion Bureau of Statistics.

Prices for most grains declined during June. No. 1 Manitoba Northern wheat, Fort William and Port Arthur basis, averaged \$1.71 per bushel as compared with \$1.82½ in June. The high price for the month of \$1.84½ per bushel was reached near the beginning and the low, \$1.61½, near the end. At the beginning of the month the government crop report indicating that the United States would have very little surplus tended to keep prices up. Later in the month, however, favourable weather conditions and good crop reports from other countries led to a reversal of sentiment, this with the lessening of foreign and domestic demand tended toward lower prices. Most coarse grains also were lower, western barley being down from 88½ cents per bushel to 88 cents; flax seed from \$2.44 per bushel to \$2.37; American yellow corn at Toronto from \$1.30 per bushel to \$1.28½ cents. Oats advanced from 60½ cents per bushel in May to 64½ cents in June. Flour advanced from an average of \$9.80 per barrel in May to \$10.02 in June. The price toward the end of the month, however, declined. Raw sugar advanced from \$3.39 per hundred in May to \$3.96 in June. Coffee advanced slightly. Potatoes were again lower, being 65 cents per bag at Toronto as compared with 80-90 cents in May. Lemons advanced from \$4.50-\$5 per case to \$10. This was said to be due to the increased demand caused by the hot weather. Raw rubber continued to advance, a grade of Ceylon being up from 67 cents per pound to 76½ cents. Linseed oil fell from \$1.25 per gallon to \$1.19. Choice steers at Toronto were down from \$7.62½ per hundred in May to \$7.50 in June. Choice sheep at Toronto fell from \$8.90 per hundred in May to \$6 in June. Hogs at Toronto were up from \$12.58 per hundred to \$13.07. Bacon was also slightly higher at 32-34 cents per pound. Finest creamery butter at Montreal advanced from 35 cents per pound to 36 cents. Cheese rose 2 cents per pound to 27 cents. Fresh eggs advanced from 34-35 cents per dozen to 37-39 cents. Raw cotton at New York advanced from 23½ cents per pound to 24 cents. Raw silk was up from \$6.15 per pound to \$6.25. Wool showed an advance of 2 cents per pound. Foundry pig iron at Montreal fell from \$28 per ton to \$27.25. Steel sheets were slightly lower. Shingles at Toronto were slightly higher at \$5.20 per M.

Some non-ferrous metals advanced somewhat, lead being up from \$8.10 per hundred to \$8.45; zinc from \$8.45 per hundred to \$8.60; and silver from 68½ cents per ounce to 68¾ cents.

Anthracite coal at Toronto again advanced, being \$13.22 per ton as compared with \$13.12 in May. Gasoline at Toronto advanced 1 cent per gallon to 24½ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Wholesale prices have continued to fall in almost every country, as may be seen from the tables, exceptions to this movement being seen in France and Italy. This is true also of retail prices and the cost of living, the upward tendency being noticeable in the above mentioned countries and also in South Africa and New Zealand. In this connection, the *Statist* for June commented as follows:—

“It will be observed that the American price-level, which, according to Bradstreet's had been falling since the end of December last, showed a recovery (of 2.3 per cent) last month. The fall in our own price-level also, which has now been in progress for five months, at last shows signs of coming to an end, and this month should see the beginning of a recovery. The May decline in the American price-level is also repeated in two others of the gold standard countries, Canada and Sweden, while the Dutch price-level shows no change on balance. This position indicates a strong situation for sterling in the gold Exchanges. Of interest also is the fresh upward turn in prices in France and Italy, denoting internal depreciation in the franc and the lira.”

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base 1913=100, was 159.0 for May, as against 162.5 for April, a decline of 2.2 per cent. Foods declined 0.9 per cent, cereals rising slightly while meat and fish and other food declined. Materials declined 2.8 per cent, all groups falling, the principal change being a fall of 8 per cent in cotton.

The *Statist* index number (in continuation of Sauerbeck's figures, base period 1867-77) declined in May for the fifth month in succession, being 1.3 per cent below the level at the end of April and nearly 10 per cent lower than at the end of December last. For the month under review foodstuffs recovered slightly, due mainly to higher meat and grain prices, but materials declined 2.4 per cent, textiles being chiefly responsible for the weakness.

The *Economist* index number of wholesale prices on the base 1901-5=100, declined 2.4 per cent to 197.8 in June. The principal change was a decline of 7.3 per cent in cereals and meat. Other foods showed a slight decline; textiles fell 2.1 per cent, minerals fell 1.2 per cent and the miscellaneous group—rubber, timber, oils, etc., rose slightly.

The *Times* index number, on the base 1913=100, was 159.1 at the end of May, 2.2 per cent below the figure at the end of April. The total decline in five months was 10.7 per cent. During May food prices declined 0.5 per cent; materials declined 3.2 per cent. All groups were lower except “meat and fish,” and “other metals and minerals,” both these groups increasing slightly.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, rose one point at the beginning of July to 173. This was due to an increase in the index of the food element to 167, one point above the June level. Other elements of the budget showed no change.

Belgium

The official index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 538 in April, a decline of 1.5 per cent. The principal group to show a decline was tobacco. Other groups showing slight decreases were food, fuel, tar, metals, oils, chemicals, fats, textiles, and construction materials. Resin and raw rubber each increased 6 per cent and other groups showed no change.

RETAIL PRICES AND COST OF LIVING.—The official index number of retail prices for the Kingdom, on the base April, 1914=100, was 502 in May, showing a steady series of declines since the beginning of the year. The index number of cost of living of a family with moderate income, on the base 1921=100, declined 2.4 per cent to 128.24 in May. Foods and heat and light declined and other elements of the budget remained unchanged. The index number for a working class family of the lowest category declined 2.3 per cent to 131.14 in April. The only notable changes were declines in food and heat and light.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, rose in May 1.5 per cent to 531. Foods rose 4.6 per cent to 470 and materials fell

slightly to 584. Vegetable foods and animal foods advanced and sugar, coffee, and cocoa, fell slightly. Textiles fell considerably and minerals and metals and the miscellaneous group rose slightly.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100 (gold prices) rose 0.7 per cent in May to 131.9. Foods rose 2.1 per cent and materials fell 1.6 per cent. Goods produced rose 1.8 per cent while goods imported fell 3.0 per cent.

COST OF LIVING.—The official index number fell 0.9 per cent in May, to 135.5 on the base 1913-14=100. Foods fell 1.9 per cent to 141.4; heat and light fell slightly to 137.9; rent rose slightly to 79.4; sundries rose slightly to 180.3 and clothing was at 173.4.

Italy

WHOLESALE PRICES.—The index number of the Chamber of Commerce, Milan, on the base 1913=100, rose slightly in May to 619.36, as against 616.39 in April. Foods declined 0.5 per cent to 606.75 and materials rose 0.8 per cent to 624.74, the highest level reached since the record was begun.

COST OF LIVING.—The index number of the City of Milan, on the base July, 1920=100, fell slightly in April to 132.45. Foods fell slightly and other elements of the budget were unchanged.

Poland

WHOLESALE PRICES.—The index number of the Central Bureau of Statistics on the base January, 1914=100, fell 1.8 per cent in April to 119.4. Wheat and vegetable products fell 2.7 per cent, animal products fell 5.7 per cent,

previous month. Fuels fell most; "other foods" rose sharply owing to the change in prices of pork and eggs. The index for May was the first published since the revision of the table of prices in Shanghai. The Bureau began in May the publication of import and export prices index numbers, classified according to stage of manufacture, instead of by chief component material as in the case of the wholesale price index number. The total import price index number was 15.33 and the export 147.3 for May, on the base average market quotation in February, 1913=100. In the export index raw materials were highest, then producers' goods, while consumers' goods were lowest. In

the import index, raw materials were highest, consumers' goods next, and producers' goods lowest. In comparing the two index numbers exports were higher than imports in producers' goods; whereas in raw materials and consumers' goods imports were higher by 8.7 per cent and 11.8 per cent respectively. Quoting the official report, "These index numbers indicate that although the general price level in this country has risen since the world war, yet export prices are low as compared with import prices. On the other hand, foreign goods are selling higher than native produce, notwithstanding the drop of prices in foreign countries after the war. These points are worthy of note, for those who are interested in the foreign trade of this country."

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-13=1000, declined 0.5 per cent in April to 1802. Agricultural produce declined 3.3 per cent and the group wool, hides, tallow, butter and cheese declines 1.2 per cent. Flour, etc., rose slightly and other groups declined slightly or showed no change.

RETAIL PRICES.—The official index number of retail prices of foods, on the base 1909-13=1000, showed no change in April. Groceries declined 1.2 per cent and dairy produce

rose 2.3 per cent. Meat showed very little change.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number of wholesale prices, on the base 1913=100, declined slightly to 155.2 in May, as compared with 156.2 in April. All groups except housefurnishing goods and miscellaneous commodities were lower than in April. In only one group, metals and metal products, was the decrease over one per cent. Housefurnishing goods showed no change and miscellaneous commodities (in-

cluding cattle feed and rubber) increased 2 per cent.

Bradstreet's index number of commodity prices (showing the cost of a list of 106 commodities) was \$13.8526 at July 1, 1.7 per cent over June 1. The increase was due to higher prices of three groups of commodities—miscellaneous products, notably rubber; textiles, especially wool; and provisions, mostly hog products. There was weakness shown in six groups, mostly in breadstuffs and vegetable oils.

Dun's index number (showing the cost per capita of a year's supply of commodities) showed a very slight upward movement at the beginning of July, being \$195.899, which was 0.4 per cent above the figure for June 1. There was a decline of 9.7 per cent in breadstuffs, due chiefly to lower prices of wheat and corn, resulting from improved crop prospects. To offset this there was an advance of 13.1 per cent in meats and advances in other foods. A rise of 2.0 per cent occurred in the clothing class and one of 1.4 per cent in miscellaneous

products. Metals declined 1.5 per cent. Foodstuffs as a whole showed considerable advance over a year ago.

COST OF LIVING.—The index number of the Massachusetts Special Commission on the Necessaries of Life on the base 1913=100 showed practically no change for May, standing at 161.2. Foods showed an increase of 0.2 per cent owing to higher prices of meats, potatoes, vinegar and onions. There

was a small decrease in the clothing section and other elements of the budget showed no change.

The index number of the National Industrial Conference Board remained at 165, on the base July, 1914=100, for the four months February to May inclusive. In May foods and clothing each rose one point, fuel and light declined 2 points and other groups showed no change from the previous month.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer Liable for Injuries Caused by Unforeseen Circumstance

A youth employed on construction work in the Province of Quebec met with an accident which resulted in his death. The accident resulted from the falling of a crane caused by the breaking of one of the iron rings on the supporting chains. There had been however no mishandling of any material by those on the job, but the employer had furnished these materials, erected the crane, and it was in his shops that the ring had been forged and soldered. The deceased had been in the habit of paying over his wages to his father, but as he was not his father's principal support, the latter could not claim compensation under the Workmen's Compensation Act, which contains this limitation in respect to the payment of compensation to

ascendants. The father therefore claimed damages under common law to the sum of \$2,900. This claim was disallowed by the Superior Court at Roberval on the ground that the accident was due to an "inanimate object" not within the employer's control. An appeal was taken against this decision in the Court of King's Bench at Quebec. The appeal court in giving judgment, found that the defendant had not proved that the circumstances attending the accident were beyond his control, but, on the contrary, it was evident that he could have prevented it by more careful work in the shop. The decision of the lower court was reversed, and damages for \$2,000 and costs were allowed.

Employees under a Government Contract may recover "Current Wages."

The Court of King's Bench at Montreal, in appeal, in a judgment given on June 29, found that the judgment of a lower court was in error in holding that a workman has no right of action against his employer for the difference, if any, between the wages he received while employed under a provincial government contract, and what he would have received had his rate of pay been in conformity with the "Current Wages" clause in the employer's contract with the government. Further particulars of this case will be given in the next issue.

—(Quebec—*Jacques versus Archambault.*)

Wages Due to Employee of Canadian National Railways may be Attached

A writ of attachment was served on the Canadian National Railways Company in respect to the wages of one of the employees

of the Intercolonial Railway, now part of the Canadian National System. The company claimed that as the system belonged to the Crown no writ of attachment issued against it was valid. The claimant, on the other hand, contended that the wages in question could be attached, as the Canadian National Railways was an incorporated company. The Superior Court at Quebec maintained the right of the claimant, and an appeal was taken by the company. The case was heard by the Court of King's Bench (in appeal), the question at issue being whether the wages of an employee of the former Intercolonial Railway continued to be attachable after the absorption of the company in the Canadian National system. The Appeal Court sustained the judgment of the lower court, pointing out that the act of 1919 (chapter 13) reconstituting the Canadian National Railways, provided in section 15 that actions might be brought by or against the company. This section enabled employees to sue the company for wages. This being so, it followed logically that the

wages of an employee of the company could be attached. It was often claimed that a writ of attachment was a method of executing judgments and therefore could not be enforced against the property of the Crown. That claim was held by the court to be unfounded. the judgment under which a writ of attachment for wages is issued being executed against the property of a wage-earner. A writ seeks only to substitute the creditor for the wage earner in the matter of payment. The Canadian National Railways was a corporation, a legal entity, able to sue or be sued in respect to its rights and obligations in the administration of all the railways under its control.

Injury to Workman While Taking Lunch in Workroom is Compensable

The leather cutters employed by a Montreal firm were allowed by their employer to take their noon meal in the workshop. They were in the habit of making use of the work tables to sit upon, as there were no chairs in the room but one which was reserved for the foreman. One of the men fell while leaving his table to procure a can opener, setting his foot on a moveable extension which broke under his weight, with the result that he sustained injuries to the leg, causing partial paralysis. He claimed \$3,750 in compensation under the Workmen's Compensation Act, alleging that his disability amounted to 40 per cent, and that he was totally incapacitated for one year. The company denied any liability, on the ground that the accident had not occurred to the claimant in the course of his work, but during the lunch hour, which was outside his working hours. The case was heard in the Superior Court at Montreal, the finding of the court being that in accordance with Canadian and French law an injury sustained by a workman who takes his dinner at his place of employment with the employer's consent, was compensable under the act. The claimant's disability rate was estimated at 20 per cent, and he was awarded damages at \$1,771 with costs, including compensation for total disability for twenty-eight weeks.

—(*Quebec—Caron versus L. H. Packard and Company, Limited, Montreal.*)

Master is Liable for an Employee's Unauthorized Manner of Doing Work

The Judicial Committee of the Privy Council recently heard an appeal from a judgment of the Supreme Court of the Straits Settlements, in a case which involved the question

of the liability of a master for the consequences of a servant's negligence and unauthorized manner of performing authorized work. In the course of the hearing certain questions of fact were submitted to the Judicial Committee, who stated that in cases where the local trial and appeal courts have agreed in their findings on such questions the Judicial Committee will rarely advise that such findings should be reversed.

The case concerned the act of certain employees in a plantation near Singapore, who trespassed on adjoining property, setting fire there to rubbish that had been transferred for this purpose from their employer's estate, and thereby causing damage to neighbouring property. Lord Phillimore, in giving judgment, said that all cases involving the question of an employer's liability for his employee's actions fall under one of three heads: "(1) The servant was using his master's time or his master's place or his master's horses, vehicles, machinery or tools for his own purposes; then the master is not responsible. Cases which fall under this head are easy to discover upon analysis. There is more difficulty in separating cases under heads (2) and (3). Under head (2) are to be ranged the cases where the servant is employed only to do a particular work or a particular class of work, and he does something out of the scope of his employment. Again, the master is not responsible for any mischief which he may do to a third party. Under head (3) come cases like the present, where the servant is doing some work which he is appointed to do, but does it in a way which his master has not authorized, and would not have authorized had he known of it. In these cases the master is nevertheless responsible."

—(*Judicial Committee of the Privy Council—Lee Kim Soo versus Goh Choon Seng.*)

Compensation not due if Workman Assumed Unnecessary Risk

The case of *Mackenzie versus the Grand Trunk Pacific Railway Company*, involving the question whether or not compensation is due to a workman who assumes unnecessary risk, has been followed in its various stages in this section of the GAZETTE. The trial court had denied the workman's claim (LABOUR GAZETTE, July 1924), but when an appeal was taken the Saskatchewan Court of Appeal inclined to allow the claim, but the appeal was adjourned to enable both parties to submit evidence to show whether or not the company actually acquiesced in the dangerous practices which caused the accident.

(LABOUR GAZETTE, February 1925). The circumstances in the case were as follows: The employee, who was a mechanic, having finished his shift, was proceeding to his home by a route which led across the railway tracks belonging to and controlled by his employer, the railway company. This was the customary route followed by himself and his fellow-workers and there was no prohibition against its use. On one of the tracks, the lead track, which he had to cross in following this route, a freight train was standing, and he endeavoured to climb and pass through between two adjoining cars. As he was about to do so the train moved, presumably without any signal, and he was permanently injured in one of his feet. There was another route by which he could have gone home but it was much longer and also necessitated the crossing of the lead track, and there was no evidence of a workman ever going that way.

When the hearing of the appeal was resumed the court found that the plaintiff had not materially strengthened his case by the further evidence submitted. That evidence only showed that it was a not uncommon practice of certain of the defendant's employees to climb over or between cars standing on the track when the cars remained there for any considerable length of time; but there was no evidence establishing the company's knowledge of, or acquiescence in, anything like a general custom on the part of the employees. The appeal was dismissed, one judge dissenting, the majority of the court finding that "in doing what he did the plaintiff exposed himself to a voluntary risk which was not incidental to his employment."

(*Saskatchewan—Mackenzie versus Grand Trunk Pacific Railway Company*).

Company Agent Acting as Pedler must have Pedlers' License

The agent of a company which had paid the tax imposed under the Corporations Taxation Act of Saskatchewan was convicted by a justice because he had neglected to take out the license required by a municipal by-law providing for the licensing of hawkers and pedlers. The agent appealed in the Court of King's Bench, citing section 35 of the Corporation Taxation Act (Revised Statutes of Saskatchewan, 1920, Chapter 31) which reads as follows:—

"Where a company pays the tax by this Act imposed no similar tax shall be imposed or collected by any municipality in this province, and no company made liable to taxation by this Act, nor any of its agents shall require any license, authorization or permit of any municipality for doing business in the municipality or for establishing agencies therein."

It was stated that the company carried on its business in the province only through agents, who solicited orders from door to door and afterwards delivered the goods ordered. The court, in giving judgment, pointed out that all corporations doing business through hawkers and pedlers do so through licensed agents, and that it would be a peculiar conclusion to find that a corporation which paid a tax of \$20 a year under The Corporations Taxation Act could send its agents to hawk and peddle through the province without restrictions, while other persons and corporations, who undertake a much heavier burden of taxation, were not so privileged. Section 35 must be construed that where a company pays the tax imposed by the Act, its agent, in the capacity of agent for it, cannot be similarly taxed nor required to take out a license qua agent of the company so taxed. If this person, who happens to be the agent of the company desires to follow an occupation which under any other legislation or regulations has imposed upon it any restrictions such as the obtaining of a license, he must obtain the license and observe the regulations, not as being the agent of the company, but because he engages in an occupation concerning which the legislature has seen fit to single it out for special legislation and regulation. The purpose of section 35 was to free companies and their agents from liability to the payment of a double tax, and was not to confer upon them the general capacity to engage in businesses otherwise forbidden. The conviction of the agent was confirmed.

(*Saskatchewan—Rex ex rel Kyte versus Aune*).

The Supreme Court of Wisconsin has upheld the validity of an amendment made in 1923 to the Workmen's Compensation Act of the State, providing that, in death cases where there are no dependents, employers shall pay into the State treasury a proportion of the money that would have been payable to the dependents. The fund thus created is used to provide additional benefits to the orphaned children of employees who have been fatally injured.

The Supreme Court of California has ruled that when a workman, in consequence of an industrial accident, suffers pain of sufficient severity or frequency to interfere with his ability to pursue his calling, the pain becomes a factor in the calculation of the amount of compensation to which he is entitled.

[NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE improvement noted last month in the employment situation in Canada was continued during the month of June, general conditions being better in comparison with those of the previous month and of the corresponding period last year. Reports from the Employment Service of Canada showed a slight contraction in the volume of business transacted during the month as compared with May, indicating more stable conditions of employment. At the beginning of July the percentage of unemployment among members of trade unions was 6.1 as compared with percentages of 7.0 at the beginning of June and with 5.8 at the beginning of July, 1924. The number of local unions from which reports were tabulated was 1,543, with an aggregate membership of 157,268 persons. Reports from 5,940 firms showed that they were employing 797,463 persons on July 1 as compared with 778,951 on June 1, while the employment index number, which is based on the number of workers employed on January, 1920, as 100, stood at 96.8, as compared with 94.5 in the preceding month, and with 95.9 on July 1, 1924.

The average cost of a weekly family budget of twenty-nine staple foods was \$10.49 at the beginning of July, as compared with \$10.44 for June; \$9.91 for July 1924; \$10.17 for July 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920, (the peak); \$13.00 for July 1918; and \$7.42 for July 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics based upon prices in 1913 as 100 declined slightly to 158.4 for July, as compared with 158.8 for June; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920, and 202.8 for July, 1919.

The time loss caused by industrial disputes was greater in July than in the previous month, or in July, 1924. Sixteen disputes were in progress at some time during the month, involving 12,882 employees and resulting in a time loss of 320,433 working days. Corresponding figures for June, 1925, were as

follows: 19 disputes, 13,906 employees, and 313,179 working days; and for July 1924, 19 disputes, 8,701 employees, and 210,736 working days.

Industrial Disputes Investigation Act, 1907

The dispute noted in the last issue between the Montreal Light, Heat and Power Company and certain of its employees terminated in July, as a result of fresh negotiations which had been undertaken through the mediation of a special representative of the Department. It was therefore unnecessary to proceed with the appointment of a Board of Conciliation and Investigation in compliance with the employees' request.

Minimum wage Board appointed in Quebec

By an order in council signed by the Lieutenant Governor on July 24, a Women's Minimum Wage Board was created in the Province of Quebec, rendering effective the Women's Minimum Wage Act, Statutes of 1919, chapter 11, amended at the recent legislative session (LABOUR GAZETTE, June, 1925, page 564). The act as originally passed made no provision as to the chairman's salary, and as this official would be required to devote his whole time to the work it was found impossible to make any appointment under such a condition. The recent amendment permitted the payment to the members of the Board of such salaries as may be fixed by the Lieutenant-Governor in Council. The salary of the chairman has since been fixed at \$3,000, and that of the other commissioners at \$800 a year. The members of the Board are as follows:—Mr. Gustave Francq, of Montreal, Chairman; Messrs. Eugène Richard, Victoriaville, Charles Griffin and Omer Brunet, Quebec City, commissioners; with Mr. Alfred Crowe, secretary. Mr. Francq is chairman of the Quebec provincial executive committee of the Trades and Labour Congress of Canada, and has been associated for many years with labour interests in the province, and particularly in Mont-

real. He acted as technical adviser to the Canadian work-people's delegate at the Seventh International Labour Conference held at Geneva in May and June this year. Mr. Brunet is one of the leaders of the National Catholic Union, and Messrs. Griffin and Richard are employers who are connected with industries in which female employees are numerous. The Commission will have its head office in the Parliament Buildings at Quebec.

Shortly after his appointment was announced Mr. Francq said: "The first thing we have to do is to look over the work of minimum wage boards in other Canadian provinces and in some of the United States. That will give us an idea of the best manner of proceeding. We can select what we think is the best from the experience of all the other boards whose reports we have, and from them we hope to be able to serve the province of Quebec in the most advantageous manner. As I interpret the act at present, we shall have no suggestions to make as to wages in any particular industry or establishment unless there is a complaint on the part of employers or employees. If such a complaint is made, it is our duty to call the parties together, secure some disinterested individuals and form a kind of adjustment board to make an agreement on the point at issue. The commission then has the power to accept, amend, or reject the agreement reached. And after us comes the ratification of the Minister of Labour of the province. The commission should be a protection both for employer and employee. If an employee really is being paid starvation wages, then the board offers a medium for remedy. The employer, too, can secure an opportunity to abolish unfair competition based on sweatshop conditions."

Minimum wages and mothers' allowances in New Brunswick

The commissioners who were appointed in New Brunswick towards the end of 1923 to investigate and report upon the subjects of Mothers' Allowances and Minimum

Wages for Women laid their reports before the Legislative Assembly of the Province during the late session (the appointment of this commission was noted in the *LABOUR GAZETTE* for June, 1924, pages 457 and 481). The full reports have not been distributed, but the recommendations with which they conclude may be quoted.

In regard to Mothers' Allowances the commissioners state: "Your commissioners have given as careful and as thorough an

investigation of this subject as was reasonably possible for them and necessary for the discharge of their duty. They sincerely trust that their conclusions, unanimously arrived at, may commend themselves to your Government and may lead to the enactment of the legislation that is herein recommended."

The legislation recommended by the commission is in the form of a proposed bill which follows closely the Ontario Mothers' Allowance Act of 1920. Under the latter act the administration of Mothers' Allowances is intrusted to a commission. Allowances are made under certain conditions to the mothers or other guardians of two or more children of school age, the local authorities being called on to contribute one-half of the amount paid in respect to beneficiaries within their territory.

The report on Minimum Wages concludes with the following recommendations:—

"Your commissioners find that there is serious need of better legislation dealing with hours and conditions of labour for minors and females. We recommend that the Factory Act be revised and improved and made to apply to a larger number of industries, and that such legislation be extended to shops and stores; and that more adequate inspection of industries and business premises be provided.

"Your commissioners favour the principle of minimum wage legislation administered by a Commission or Board which fixes a minimum for any trade or industry after a careful consideration of all the conditions of the industry. We are of the opinion that such rate-fixing should be exercised much as is done by the Board in the Province of Ontario. In that province, as already shown, the legislation has won the unanimous support of all representatives of employers and employees alike, and has always carried with its decision the support of the trade regulated. We have suggested methods by which a Board might be constituted to regulate wages for females in this province, but we do not think the province is justified in establishing expensive machinery for the administration of an Act which will not concern a large number of workers or industries of the province.

"Your commissioners have been able to reach an unanimous conclusion, and we humbly submit our report for your consideration."

Fair wage clause in Quebec

A report is given in the section of this *GAZETTE* entitled "Recent Legal Decisions Affecting Labour" of the judgment of the Court of King's Bench, at Montreal, in appeal, in a case concerning a workman's right to

recover the full amount of "current wages" for work performed under contract with the Provincial Government. The appeal court conceded the workman's general right of recovery, but in this particular case a discrepancy was found in the evidence as to the actual amount of the prevailing rate, the court deciding that the "current rate" meant the amount for which a sufficient supply of labour could be secured. Since this judgment was given the Montreal Trades and Labour Council has suggested that the resolution requiring the insertion of a fair wage clause in contracts for public works should be so amended as to require that such contracts should include a schedule specifying the actual rates of wages to be paid for each trade to be employed by the contractor. It was contended that the omission of such a provision has rendered the resolution useless, and that it should be amended so as to follow the lines of the Federal Order in Council, which makes definite provision for defining "current wages." Under the Federal Order "the Department of Labour is charged with the preparation of schedules setting forth the rates of wages and hours of labour generally accepted as current, for competent workers of the various classes required, in the district in which the work is to be performed"

The resolution which governs the payment of "fair wages" in connection with public works in the Province of Quebec was adopted by the Legislative Assembly on April 14, 1908, and was in the following terms:—

"Be it resolved that all Government contracts shall provide conditions necessary for the prevention of abuses that may occur under subcontracts, and that all possible efforts shall be made for the purpose of paying to the workers the prevailing wages paid to competent workers in the locality in which the work is performed; and this Assembly heartily concurs in the adoption of such a policy, and is of the opinion that it is the duty of the Government to carry into effect without further delay the said resolution."

School attendance to eighteen years in Ontario

Section 7 of the Adolescent School Attendance Act, Statutes of Ontario, 1919, Chapter 78, will become effective on September 1, 1925. The date originally fixed by a proclamation dated July, 1920, was September 1, 1923, but another proclamation, dated April, 1923, postponed it for a period of two years. Section 7 reads as follows:—

7. (1) Unless excused for reasons hereinafter mentioned, every adolescent between sixteen and eighteen years of age shall attend part-time courses of instruction, approved by the Minister, for an aggregate of at least 320 hours each year, distributed as regards times and seasons as may suit the circumstances of each locality, when such courses of instruction are established in the municipality in which he resides or is employed.

(2) The obligation to attend part-time courses of instruction under this section shall not apply to any adolescent if—

(a) He is unable to attend such courses by reason of sickness, infirmity, or other physical defect;

(b) He has passed the matriculation examination of an approved university or has completed to the satisfaction of the Department of Education, a course of study which may be regarded as the equivalent of the requirements of such examination;

(c) He is in full-time attendance at a public or a separate school, a high school, a university, or other school approved by the Minister;

(d) He is shown to the satisfaction of the public school inspector in the municipality in which he resides to have been, up to the age of sixteen, under full-time instruction in a school recognized by the Department of Education as efficient, or under suitable and efficient full-time instruction in some other manner.

With the taking effect of section 7 the entire Adolescent School Attendance Act is now in operation. The act requires that every adolescent between fourteen and sixteen years of age shall attend school for full time unless he has been granted a home permit or an employment certificate by the school attendance officer, and every adolescent between fourteen and sixteen who holds such a permit or certificate must attend part-time courses for an aggregate of at least 400 hours each year. Every adolescent between the ages of sixteen and eighteen years, unless excused for a special reason, must attend part-time classes for at least 320 hours each year. Municipalities with a population of 5,000 or over must, and other municipalities may, establish part-time courses selected from those prescribed by the Department of Education.

Employment and retraining of former soldiers

The Department of Soldiers' Civil Re-establishment states that it has almost completed that side of its work that was concerned with the retraining of ex-

service men to enable them to support themselves in civil life. At one time, one of the major activities of the Department was the granting of vocational training. This has now dwindled almost to the vanishing point. During 1924 training was granted to 180 men and vocational loans issued amounting only to \$7,986. Since its inception 43,072 men have completed training and have graduated. It has, unfortunately, been necessary to continue during the past year to issue relief. The work entailed is considerable, as every application has to be investigated as to home conditions, reasons for unemployment and so forth. Relief has now practically been discontinued for the summer months and it is hoped, with a revival of industrial activities, that there will be a materially lessened demand during the next winter. In 1924, 33,643

applicants were assisted and expenditure was made amounting to \$336,966. The Department has recently commenced what may subsequently become a work of fairly large dimensions, namely, the maintenance in some of its hospitals of indigent pensioners. It is too early to indicate what this may mean in the future.

An important side of the work of the Department is the provision of "sheltered employment" for partly disabled men. The Department has been confronted for several years with the problem of the man who has a comparatively small pensionable disability but a large non-service disability superimposed thereon. While the pension paid compensates as far as possible for the lack of earning capacity in respect of the service disability, the fact that he is further disabled as a result of disease or accident contracted in civil life often renders him well nigh unemployable. In order to assist in dealing with this problem, the Department established for experimental purposes sheltered employment workshops, which have generally adopted the name of "Vetercraft" workshops. In these workshops, employment is given to disabled men, augmenting their pensions, and in some cases where the disability has previously prevented regular employment outside, restoring them to ordinary working capacity. Articles such as tables, chairs, baskets, toys and many others are manufactured. The time has passed when the products can be sold on sentimental grounds, and it is necessary, therefore, to supply goods capable of competing with ordinary workshops. Practically all the poppies which are sold in connection with Armistice Day are manufactured in these shops or at the homes of disabled ex-service men.

Labour tribute to Ontario Workmen's Compensation Act

Mr. James Simpson, vice-president of the Trades and Labour Congress of Canada, in the course of a recent address, paid a tribute to the Workmen's Compensation Act of Ontario. "The act has been exceedingly beneficial to both workmen and employers," he said; "workmen appreciate the wide protection and liberal benefits which they receive, and the speediness of payment which they enjoy under the simple form of procedure and collective system of liability. Employers appreciate their freedom from individual liability, which might cripple or ruin any but the largest. Both parties appreciate their immunity from the annoyance and the enormous expense of litigation. Millions of dollars are conserved to

both workmen and employers by the simplicity and inexpensiveness of the methods of administration and by the substitution of the collective system for individual liability and private insurance. To pay the 46 million benefits that have been provided to date in all the industries under the act would, under the Michigan system, for instance, have cost over \$50,000,000 more than the Ontario employers have had to pay. The workman in Michigan, in fact receive a great deal less, while the employers there pay a great deal more than in Ontario."

Workmen's compensation in New Brunswick

The Honourable P. J. Veniot, former premier of New Brunswick, in a recent statement on the late government's policy in regard to Workmen's Compensation, said "The Workmen's Compensation Law has resulted in much good to the labouring classes and rightly so. It has also been a source of benefit to the employers of labour, because it has done away with all litigation in claims for compensation. While the workmen, through their organizations, have requested certain amendments to the law, which would have increased the compensation allowed for injury or death by accident, the government has felt constrained not to give favourable consideration to such demands, especially in view of the depressed condition of industry in general. The determination of the government is to do all within reason for the adequate protection of the employee consistent with the ability of industry to surmount the grave difficulties with which it is now confronted by reason of the very great depression, which to-day is common to the whole of Canada."

Unemployment statistics in Canada

The International Labour Office, Geneva, recently published a report on Methods of Statistics of Unemployment, which had been prepared for the recent International Conference of Labour Statisticians (LABOUR GAZETTE, June, 1925). The conference adopted the recommendations contained in the report, to the effect that in countries in which a widespread system of unemployment insurance exists, the information obtained from the working of such a system forms the best basis for unemployment statistics. In regard to unemployment statistics based on estimates made by trade unions, such as appear in the present issue of this GAZETTE, the report states:

"Certain countries where a compulsory or voluntary insurance does not exist publish regular statistics of unemployment based on returns from trade unions, although the latter do not pay unemployment benefits to their members. This was the case before the war in France, and up to recent years in New York and Massachusetts, and is still the case in Australia and Canada. The statistics thus obtained might in principle be considered superior to those based on statistics of insurance, for they are independent and not influenced from time to time or from one industry to another by differences in the administration of the insurance scheme. This theoretical superiority, however, is also an element of weakness, for information supplied by the trade unions who do not pay unemployment benefits to their members, is generally only a more or less rough estimate, for the unions are not specially in a position to compile statistics. Further, unions which do not possess any system of mutual aid for their members such as unemployment funds are often much more unstable, and show greater variations in their membership than other unions. They therefore afford a more unfavourable field of observation.

"With these reservations the statistics published by Canada as to trade union unemployment are the same kind as those discussed in the preceding section (that is, in connection with statistics of voluntary insurance). They relate to a given day of each month, and give both the absolute number of unemployed and the percentage of the total number of individuals covered by the enquiry."

In connection with the statistics of employment which are published monthly and quarterly in the LABOUR GAZETTE it may be noted that the employment situation at a given date is estimated from three lines of inquiry:—(1) reports received from the offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies, and the number of workpeople placed in positions; (2) reports from trade unions showing the extent of unemployment among their members; and (3) reports from employers throughout Canada showing the number of employees on their payrolls. The information derived from those three sources is considered to give a fair indication of the movements of employment and of the extent of unemployment in the period under review.

Policemen's superannuation at Vancouver

A decision by the Vancouver city council last February to submit the question of policemen's superannuation to the ratepayers at the next municipal elections was noted in the March issue of this GAZETTE, and further information on the progress in other cities was given in the February issue (page 98). The *Vancouver Province* states that the policemen of Vancouver are now protected by an insurance system of their own, known as the Horton Scheme in honour of its originator Constable Henry Horton, one of the veteran members of the force. The scheme, it is stated, was approved by the

city council about two years ago, and became operative on July 1 this year. It provides that on the death of a police officer his beneficiary shall receive \$2,000, and each member of the force is to be assessed a sum sufficient to make up this amount. With the force at its present strength, the assessment will be less than \$10 a head. The money will be immediately paid from the city treasury to the beneficiary, and the assessment stopped on the pay cheques of the policemen at the next pay-day. Representatives of the men and the city act as a board to administer the scheme. Only two deaths have occurred among the men of the police department during the past seven years, and had the scheme been in effect during that period the cost to the individual member would have been less than \$20 for insurance covering that time.

Labour and industrial management

An article contributed by Roy Dickinson to *Printers' Ink* (New York) in its issue of July 23, describes the growing interest of labour in management. In connection with the settlement of industrial disputes the writer refers with approval to the Canadian principle, as embodied in the Industrial Disputes Investigation Act, that government policy should be "directed towards uncovering wrongs in industry rather than in compelling operations according to fiat." He regards the recent failure of the Kansas Court of Industrial Relations as signifying the collapse of compulsory arbitration in the United States. Both sides, he believes, have now found a road to lasting industrial peace. "There is a growing tendency among labour everywhere," he says, "to take more responsibility, to help more in eliminating waste, to study sales and advertising problems as well as hours and wages. And there is a growing tendency upon the part of manufacturers to meet labour more than half way in its new attitude."

The article states that the new interest of labour in management is shown by an address delivered by President William Green of the American Federation of Labour at the recent conference of industrial waste held at New York, when he said: "Labour is interested in the successful management of industry because it reasons that with the introduction of economy processes, in the development of efficiency and increased production, the cost of manufacturing and production can be reduced without lowering the standard of the workers or reducing wages. Labour finally believes that if

the cost of production of commodities must be lowered it should be accomplished through the promotion of efficiency in workmanship and management, the elimination of waste and the introduction of economy processes. This belief is contrary to the old accepted rule of reasoning which held that a lowering of the cost of production could be brought about only through a reduction in wages."

Mr. Dickinson's investigations lead him to the conclusion that "the elimination of industrial waste and the cutting down of industrial strife have made further progress in the last two years in the United States than in any ten years in its previous history."

H. M. Kallen, writing in the *Survey* (New York) notes that the Amalgamated Clothing Workers of America is a pioneer among labour unions in applying the theory that management rather than wages is the fundamental concern of a trade union. The policy of the Amalgamated Clothing Workers in regard to management was stated by the president, Sidney Hillman, in a recent interview as follows: "There are hundreds of manufacturers in the clothing industry who are unfit to manage a peanut stand. Some of them honestly cannot pay decent wages for the sufficient reason that they do not know how to run their business profitably without exploiting labour. Time and again, in literally numberless cases, we have had to lend them our experts to fix up their payrolls, to straighten out incredible tangles, to introduce the most elementary efficiency methods. We help them for one excellent reason; the clothing workers must have their living out of the clothing industry, just as their employers. Until now labour has fought from a sense of outrage against exploitation. Henceforth it will fight more and more from a sense of industrial and social responsibility."

Group life insurance

A scheme of group life insurance for the employees of the Canadian Bank of Commerce became effective

on April 15. The *Caduceus*, the staff magazine of the bank, explains the advantages that are derived by employees from group insurance as compared with individual contracts. The main difference is that under the group insurance system the rate of premium payable by each employee is based upon the general staff mortality record, instead of being separately adjusted to the general mortality tables. From the point of view of cost, group insurance is written in wholesale quantities and it sells at a wholesale rate. The wholesale factor, alone, is unusually favourable to

the insured and a large additional saving is effected in administration through the use of the employer's collecting and administrative machinery. A further important saving results from the elimination of the cost of medical examinations. The process of fixing the amount of the rates is as follows:— There is at the outset a standard rate for each age agreed to by the underwriters. Each of such rates is multiplied by the total number of insured at the relative ages, and the total sum of these multiplications is the amount of the annual premium on the whole group. This premium, divided by the total number of the group, gives the average rate. The rates of staff contribution are more or less arbitrarily fixed by the underwriters according to the amount of the average premium.

Group life insurance, it is pointed out, is a comparatively recent development, even in the United States where it originated. The first contract was issued by the Equitable Life Assurance Company in 1912. Contrary to the usual course with new forms of insurance, the idea had its inception in the mind of the employer and not the insurance company. Owing to legislative restrictions and opposition from various quarters it was not permissible for the insurance companies to write group contracts in Canada until November, 1919. The business has assumed huge proportions in the United States and has had a wide and rapid growth in the short time it has been in operation in Canada. This is not surprising when it is considered that owing to its special features it places this protection at the command of large numbers who formerly were compelled to look upon life insurance more or less as a luxury.

Cost of living inquiry in South Africa

The Minister of Labour of the Union of South Africa has appointed a committee to inquire into the cost of living in the Union. The

subjects of the inquiry will be as follows:—

(1) What expenditure is required to maintain in certain typical industrial areas (a) on an average regimen; (b) on a minimum regimen a civilized standard of living for a typical family of man, wife, and three children.

(2) In what proportion is expenditure involved in—(a) food, fuel, and light; (b) rent; and (c) the group of expenditure usually described in the Union Statistics as "Sundries."

(3) How far is the food supply of the Union produced locally, and how far does the Union depend on imported food.

(4) What is the consumption of staple commodities by various classes of the community.

(5) How far is it possible by means of publicity to induce buyers to buy wisely.

(6) How far can publicity as to comparisons of prices influence the course of prices.

(7) How far can any measures be suggested which would influence the cost of house rent.

According to press reports from New Brunswick, 50,000 school children in New Brunswick will get free school books under the provincial government's new plan affecting pupils up to and including grade five of the city and town schools of the province. Of the number, 20,000 pupils are attending school in urban centres while 30,000 are pupils in rural schools. In urban schools the work carried on eight grades is equivalent to that carried on by five standards in rural schools. Only these texts which are required up to the end of the respective classes are being furnished.

The British House of Commons has rejected a proposed amendment to the Old Age Pensions bill that would have provided for the continuance of pension payments to persons going to reside in other parts of the Empire. (The provisions of the bill were outlined in the May issue of this GAZETTE.) On behalf of the government it was stated that administrative difficulties rendered the proposal impracticable. Steps are, however, being taken to make a reciprocal arrangement with any Dominion that has instituted a similar scheme whereby pension rights may be transferred into a Dominion scheme where one exists working in conjunction with the British scheme.

The Robert Mitchell Company Limited, of St. Henry, Montreal, Quebec, recently offered a block of stock to the officials and employees of the company for purchase on the partial payment plan. This allotment was quickly taken up and further blocks are to be appropriated at intervals in the future. The company was incorporated in 1896 and this year a new company was formed in order to permit of a larger interest being taken by the employees in the company's affairs. The employees of the company have an elective body known as the "Shop Committee" which represents their interests to the management. Group insurance has been adopted, and there is a mutual benefit society within the company.

The Canadian Cottons, Limited, has recently made provision for the welfare of the employees of their Gibson mill at Marysville, New Brunswick, in the form of a handsome

and well-equipped club house, at a cost of about \$25,000, named the Dawson Club, in honour of Mr. A. O. Dawson, the first vice-president of the company. The formal opening of the club took place in February last with about 450 members present. The company are considering employing a permanent secretary to supervise its activities. The club was started some years ago and was originally housed in a wooden building which was destroyed by fire in February, 1924. An interesting feature of the erection of the new building is that it was done entirely by Marysville men, chiefly employees of the company, which was running on short time during the period.

In Chile, various laws on labour relations composing the labour code, which were promulgated on September 26, 1924, became effective March 26 last. These laws are those on labour contract, union organization, labour disputes, labour contract of private employees, amendments to the industrial accident law, sickness and old-age insurance, and co-operatives. The eight-hour law now takes effect throughout the Republic. Among recent legislation is a decree-law giving employed women the right to 60 days' leave of absence at confinement and to one hour a day for the care of their infants. In March last, provision was made whereby the salaries of women teachers in the secondary schools were made equal to those of men, as was already the case in the primary and normal schools.

The International Co-operative Bulletin, the official organ of the International Co-operative Alliance, with headquarters in England, states that during the late strike in the coal mines of Nova Scotia, the Sydney Mines Co-operative Society provided over 40,000 meals for children in the mining camps and performed other relief work. A relief fund was organized also by the Canadian Co-operative Union in order to mitigate distress among the families of the miners. The Sydney Mines Society has a number of branch stores, so that the miners throughout the entire district can have their needs supplied co-operatively. It has now 2,770 members out of a total of about 12,000 miners; in 1924 it did a trade of nearly one and a half million dollars on which a surplus of \$135,922 was realized. The handsome dividend of 12 per cent on purchases made during the last quarter of 1924 was distributed at an opportune time and proved of immense help to numbers of families who would otherwise have suffered much privation owing to the strike.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

The Labour Situation

EMPLOYMENT at the beginning of July showed a further increase, which exceeded that indicated on the same date of last year and caused the situation to be more favourable than at that time.

The employment situation at the end of July, 1925, was reported by superintendents of the Employment Service of Canada to be as follows:—

In Nova Scotia farming opportunities were supplying employment to a number of additional workers. Logging—mostly the cutting and peeling of pulpwood—was reported as very active. The fishing industry was profiting by good catches. Manufacturing, although in the Sydney district showing the effects of the strike, was reasonably active. Throughout the province construction and building work was rather quiet. Trade, both wholesale and retail, was fair.

Haying operations necessitated the taking on of a number of additional farm hands by New Brunswick farmers. As in Nova Scotia, fishing was reported to be good in this province. The manufacturing industry, particularly that connected with lumber, appeared to be good throughout different centres. The construction industry was active and promised well for the future.

In Quebec the employment situation showed substantial improvement at the end of July as compared with the end of the preceding month. The demands for farm hands were brisk. While manufacturing generally was improving a depression in the lumber market affected allied lines of business. The larger centres reported construction prospects as favourable, especially in the city of Quebec. Extra gang work on railroads absorbed a number of men.

From the Province of Ontario quite discernible improvement in employment conditions in recent weeks was reported. Summer demands for farm help were good and continued to diminish the supply of workers seeking employment. Generally, factories appeared to have maintained their earlier gains, and the manufacturing industry was further increased by such seasonal activities as canning. In the southwestern section of the province these gains in the manufacturing group were most noticeable. Building and construction were reasonably active, while road work afforded numerous opportunities for employ-

ment. Several offices throughout the province reported fewer applicants. From the northern section conditions seemed to have improved to some extent over the quietness which was noticeable earlier in the summer.

The most noteworthy feature of the employment situation in Manitoba was the improvement in the demand for farm workers in anticipation of the harvest. Building construction was quiet, although railroad work continued to absorb some men. The usual seasonally heavy demands for domestic workers remained only partially satisfied.

In Saskatchewan farm demands increased and slight shortages of competent workers were reported in some districts. Building construction tradesmen seemed fairly well employed although there was no shortage of any class of these workers. Railroad construction continued to increase its demands for labour. The usual difficulty in filling farm domestic orders was again reported. While there was a fair demand for casual labour throughout the province, plenty of applicants to fill all jobs were applying at the employment offices.

In Alberta, as in Manitoba and Saskatchewan, the most decided tendency in the employment situation was that of the demand for farm labour to increase placements, and increased vacancies in some districts exceeded the supply. In the different branches of construction the demand for workers was good, although sufficient numbers were available. Coal mining in the Drumheller district was quiet, due partly to the season and partly to industrial trouble. Broadly speaking, employment conditions in Alberta showed improvement.

In British Columbia the exodus of workers to the prairie harvest fields had already begun to relieve the local employment situation. Serious bush fires, which had temporarily absorbed a large number of workers, interfered to a considerable extent with certain industries, notably logging. With some development work proceeding, metal mining was reporting from most districts as very active. Construction, however, was inclined to be inactive. Throughout the province as a whole, employment conditions appeared to show some improvement during the month due to impermanent seasonal work and the demand for fire fighters in the areas where the bush was burning.

According to the Dominion Bureau of Statistics, there was a further increase in employment as indicated by employers at the beginning of July. This increase, though smaller than that recorded in the preceding month, was greater than on July 1 of any other year of the record. The situation was better than at the same time last year, all industries except logging and trade registering increased activity, that in construction being most pronounced.

Improvement was noted in all provinces, but the Maritime Provinces and Ontario showed the largest gains. In the Maritime Provinces, there was very marked expansion in highway construction, supplemented by smaller increases in manufacturing, while shipping was slack. In Quebec, there were heavy seasonal contractions in logging, and declines on a smaller scale in shipping, but improvement in manufacturing, construction and steam railway operation caused a net increase in employment in the province. In Ontario, construction and manufacturing registered the most noteworthy increases, but there were also gains in mining, communication, transportation and services. On the other hand, logging reported considerable seasonal reductions. In the Prairie Provinces, construction, transportation, services and mining registered the largest increases, while manufacturing showed no change and trade was slacker. In British Columbia, there were important increases in lumber and food factories and in mining, construction and services, but logging and iron and steel afforded less employment.

There were increases on a comparatively small scale in all the cities for which separate tabulations are made. In Montreal, construction, food and tobacco works were more active, while iron and steel plants were slacker. There was general improvement in Quebec. In Toronto, important gains were noted in manufacturing, while transportation and construction afforded less employment. In Ottawa, there was a slight increase, chiefly in building. In Hamilton, manufacturing and construction registered a higher level of employment. In Windsor, increases in construction and some other industries were partly offset by reductions in iron and steel. In Winnipeg, practically no change was shown; improvement in construction was almost counterbalanced by losses in trade and manufacturing. In Vancouver, manufacturing and construction recorded increased activity.

There was a further increase in employment in manufacturing, the lumber and food groups showing the greatest gains. Mining, com-

munication, transportation, services and construction also recorded important increases, those in the last named being especially pronounced. Logging, on the other hand, registered marked seasonal declines, while in trade practically no change since the preceding month was indicated.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1925.

TRADE UNION REPORTS

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Unemployment at the close of June as shown by reports received from 1,543 labour organizations with 157,268 members was lower than in the previous month, the percentage out of work on June 30 standing at 6.1 as compared with 7.0 per cent in May. The situation was, however, slightly less favourable than in June of last year when 5.8 per cent of the members were out of work. Nova Scotia, Quebec, Manitoba, Saskatchewan and Alberta unions all registered improvement, the gain in Alberta being most noteworthy. In the remaining provinces the declines were very slight. In the manufacturing industries reports tabulated from 426 unions, with a membership of 45,047 persons, showed that 10.0 per cent of the members were idle, as compared with 12.1 per cent in May. Cigar makers, pulp and paper makers, garment and jewelry workers were considerably busier than in May, and lesser gains were recorded by leather and iron and steel workers. Of the reductions the most substantial were for glass workers, metal polishers, hat and cap makers, textile and wood workers. Very little change in the situation took place in the manufacturing industries in comparison with June of last year, when 10.3 per cent of the members were idle. Strike conditions still prevailed in the coal mines of Nova Scotia and the situation among the miners who were not on strike was slightly less favourable than in May. In the Alberta mines improvement was reported, while in British Columbia practically no change occurred, all the miners being reported

at work. Asbestos miners in Quebec and quarry workers in Nova Scotia were fully employed. The situation in the building trades was slightly less favourable than in May, 8.4 per cent of the members being idle as compared with 7.0 per cent in May. However, better conditions prevailed than in June of last year when 10.6 per cent of the members were unemployed. Steam shovel and dredgemen reported considerable improvement over May, and tile layers, lathers and roofers and granite and stone cutters also were slightly better engaged. In the remaining trades employment declined, especially for painters, decorators and paperhangers, but the other reductions were slight. In the transportation group reports were received from 618 unions with an aggregate membership of 56,865 persons, 1,845 or 3.2 per cent of whom were out of work, as compared with percentages of 3.9 in May and with 2.6 in June of last year. Navigation workers were not so well employed as in May, and reductions were also reported by street and electric railway employees, but the improvement for steam railway employees more than offset the contractions in the other divisions of the group. The situation for retail shop clerks remained unchanged. Theatre and stage employees, barbers and stationary engineers were slightly less active than in May, but employment for hotel and restaurant employees was in greater volume. Fishermen reported no unemployment. Lumber workers and loggers were slacker.

A summary of unemployment as reported by trade unions during the quarter ending June 30, 1925, appears elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS During the month of June, 1925, the offices of the Employment Service of Canada referred 28,316 workers to employment and made a total of 27,069 placements. Workers placed in regular employment numbered 18,819, of which 14,946 were of men and 3,873 were of women. Placements in casual work numbered 8,250. Employers notified the Service of 29,335 vacancies, of which 20,125 were for men and 9,210 for women. The number of applicants for work was 38,017, of whom 27,516 were men and 10,501 were women. When the above figures are compared with those of the preceding month a slight decline is shown in the volume of business transacted, the records for May, 1925, showing 30,650 vacancies offered, 39,953 applications made and 28,533 placements effected, while in contrast with the month of June a year ago an

increase is noted, there being recorded during that period 27,907 vacancies, 35,730 applications for work and 24,756 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1925, and for the quarterly period April-June, may be found elsewhere in this issue.

PRODUCTION REPORT

The Dominion Bureau of Statistics reports that the production of pig iron in Canada in June amounted to 45,883 tons, a decline of 27 per cent from the 63,204 tons produced in May. The total includes 38,679 tons of basic iron, 3,125 tons of foundry iron, and 4,079 tons of malleable iron. For the first half of 1925, the cumulative production totalled 290,892 tons, as compared with 427,105 tons for the corresponding period in 1924, and with 435,000 tons in the first half of 1923. This year's tonnage was composed of 252,470 tons of basic iron, 21,746 tons of foundry iron, and 16,676 tons of malleable iron. Blast furnace charges in June consisted of 82,862 long tons of ore, 51,528 short tons of coke, and 29,334 short tons of limestone. For the six months ending June, the total charges were 536,037 long tons of ore (including 6,098 tons of Canadian ore), 322,502 short tons of coke and 166,695 short tons of limestone. During the month one furnace at Sault Ste. Marie, Ontario, was blown out, while at Sydney, Nova Scotia, one furnace was blown out and one banked. Two furnaces remained in blast on June 30, one at Hamilton, Ontario, and one at Sault Ste. Marie, Ontario. Ferro-alloys at 2,229 tons showed little change in production from the 2,293 tons produced in May. The total output of ferro-alloys for the six months' period was 12,217 tons, or 22 per cent under the 15,768 tons produced in the first half of 1924.

The production of steel ingots and castings fell to 63,140 tons, or 37 per cent under the 100,250 tons produced in May. The decline was all in the production of basic open hearth steel ingots intended for the further use of the reporting firms, this grade dropping to 60,983 tons as compared with 98,613 tons reported for the previous month. For the first six months of the year, the cumulative production was 423,697 tons as compared with 488,733 tons for the same period in 1924.

A report from the Department's correspondent at New Glasgow, Nova Scotia, gives the following figures showing the production of coal in Pictou County, Nova Scotia, for the month of June, 1925:—Intercolonial Coal Mining Company, Limited, Westville, Nova Scotia, 19,645 tons; Greenwood Coal Company, Limited, Thorburn, Nova Scotia, 5,548 tons.

As complete figures showing the coal production in Canada for June are not yet available, the statistics for the previous month are given at the end of this section.

A report from the British Columbia Forestry Branch shows that 206,225,124 feet of timber, board measure, was scaled in the province during June, 1925. The total includes fir, 92,690,008 feet; cedar, 44,766,421 feet; spruce, 17,682,757 feet; hemlock, 28,409,272 feet; balsam, 8,415,330 feet; yellow pine, 5,290,686 feet; white pine, 2,371,577 feet; jack pine, 1,507,361 feet; larch, 4,190,923 feet; and miscellaneous species, 900,789 feet. The total timber scaled in the province during the first six months of 1925 was 1,063,199,618 feet.

The gross earnings of the Canadian National Railways, including affiliated lines in the United States, according to a preliminary statement issued, amounted to \$18,204,662 in June, 1925, as compared with \$19,678,067 in June, 1924. The total gross earnings for the first six months of the year are given as \$105,543,743, as compared with \$114,862,558 for the same period in 1924.

The gross earnings of the Canadian Pacific Railway Company are given in a preliminary statement as \$13,464,647 for June, 1925, as compared with \$12,467,612 for May and with \$15,135,633 for June, 1924. The cumulative earnings for the first six months of 1925 are given as \$75,155,820 as compared with \$84,656,917 in 1924.

Coal Statistics for May.—The output of coal from Canadian mines during May increased 19 per cent over the production for the preceding month, but was 33 per cent below the average for May in the past five years. The figures were 664,236 tons in May as against 556,213 tons in April, while compared with the average for the month during the five preceding years, the decrease was 313,120 tons. Production by provinces in May, when compared with the five-year average for the month showed a decrease in all the coal-producing provinces except Alberta and British Columbia. The production by provinces during the month of May was as follows: Nova Scotia, 67,000 tons, New Brunswick, 16,000 tons, Saskatchewan, 16,000 tons, Alberta, 355,000 tons and British Columbia, 210,000 tons. There were 9,524,968 tons of coal made available for consumption in Canada during the first five months of 1925.

The total number of men employed in the coal mines of Canada during May was 14,337, of whom 10,074 worked underground, and 4,263 on the surface, as compared with a total of 15,512 in April, of whom 10,944 worked underground and 4,568 on the surface. During

May there were 2,234 men employed in Nova Scotia, 593 in New Brunswick, 298 in Saskatchewan, 6,216 in Alberta, and 4,996 in British Columbia. Production per man was 46.2 tons for May, as against 35.7 tons per man for April. During May the production per man-day was 2.3 tons, as compared with 2.0 tons in April. The tonnage lost was largely due to lack of orders.

Coke production in Canada during May showed a slight decline, the amount produced being 130,068 tons. More imported coke was used than in any previous month this year, owing to the difficulty of obtaining Canadian coal for the coke ovens in eastern Canada.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in June in sixty cities throughout Canada showed a decline of 4.2 per cent as compared with the previous month, but a gain of 4.9 per cent as compared with the same period last year. The total for June, 1925, was \$14,651,613; for May, 1925, \$15,296,080; and for June, 1924, \$13,961,006.

FOREIGN TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in June, 1925, the merchandise entered for consumption amounted to \$75,591,505 as against \$66,395,750 in 1924. The domestic merchandise exported amounted to \$93,462,993 in June, 1925, as compared with \$96,356,747 in May and \$87,218,747 in May, 1924. Foreign merchandise exported amounted to \$856,134 in June, 1925, and \$1,109,342 in June, 1924.

The chief imports in June, 1925, were: iron and textile products, \$12,961,798; non-metallic minerals and products, \$12,295,318; and agricultural and vegetable products, mainly foods, \$11,506,527.

The chief exports in the same month were in the groups of agricultural and vegetable products, mainly foods, \$31,733,514; wood, wood products and paper \$24,172,959; animal and animal products, \$13,330,745; and non-ferrous metals and their products, \$8,706,954. In the three months ending June, 1925, exports of agricultural and vegetable products, other than foods, were valued at \$39,767,247; wood, wood products and paper, \$62,067,419; animals and animal products, \$30,927,924; and non-ferrous metals and their products, \$22,022,554.

Strikes and Lockouts

The time loss due to industrial disputes was greater in July than in June, 1925, or July,

1924. There were in existence during the month 16 disputes, involving 12,882 employees, and resulting in a time loss of 320,433 working days, as compared with 19 disputes in June, involving 13,906 workpeople and resulting in a time loss of 313,179 working days. In July, 1924, there were recorded 19 disputes, involving 8,701 employees and resulting in a time loss of 210,736 working days. Four new strikes and lockouts commenced during July, with a time loss of 10,033 working days. Three of the strikes and lockouts commencing prior to July, and one of the strikes and lockouts commencing during July, terminated during the month. At the end of the month, therefore, there were twelve strikes and lockouts on record, affecting 12,609 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices showed little change but were slightly higher. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.49 at the beginning of July, as compared with \$10.44 for June; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.92 for June, 1920, (the peak); \$13 for July, 1918; and \$7.42 for July, 1914. The cost of eggs, sirloin steak, potatoes, bacon and creamery butter was higher, while salt pork, veal, lard, sugar and cheese cost less than in June. Including the cost of fuel and

rent with that of foods, the total budget averaged \$20.70 at the beginning of July, as compared with \$20.67 for June; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920, (the peak); \$20.66 for July, 1918, and \$14.17 for July, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined slightly to 158.4 for July, as compared with 158.8 for June; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920; and 202.8 for July, 1919. In the grouping according to chief component material, four of the eight main groups were higher, two were lower, while two were practically unchanged. The Vegetables and Their Products group was substantially lower, increases in the prices of rubber, potatoes and hay being more than offset by the declines in grains, flour, sugar, imported fruits, tea and coffee. The Iron and Its Products group was also lower, due mainly to lower prices for steel billets. The groups which advanced were: Animals and Their Products, due mainly to higher prices for hogs, bacon, ham, butter, cheese and eggs; Fibres, Textiles and Textile Products, due to higher prices for cotton and silk; Non-Ferrous Metals and Their Products, because of advances in the prices of copper, lead, silver, tin and zinc; and Wood, Wood Products and Paper. The Non-Metallic Minerals group and the Chemicals and Allied Products group were unchanged.

Labour Turnover in the United States

An investigation has been carried out recently by the Industrial Commission of Wisconsin with a view to securing information for each separate industry as to the number and percentage of workers who have been engaged by the same employer for a period of one complete year or more.

A total of 691 employers' reports have been analysed, comprising 85,617 employees. Of these, 65,501, or 65.9 per cent of the total, had worked for their present employers for a period of one year or longer.

In the case of six industries—baking and confectionery, canning and preserving, leather gloves, stamped metal goods, paper box manufacturing, and light retail stores—the proportion of employees working one year or more

for the same employers was below 60 per cent. For six others—boots and shoes, furniture factories, machinery manufacturing, paper and pulp mills, clothing manufacturing, and printing and publishing—the percentage was above 70.

No explanation is offered for the differences in stability of employment in these industries, but from the statistics given there would appear to be some connection between the skill required, and the length of tenure of work. The light retail stores, which show the smallest proportion of permanent employees, are well known as employers of young women and girls at low wages, for whom the chances of advancement to well-paid positions are small.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JULY

During the month of July the Department received word that as a result of the renewed negotiations between the Montreal Light, Heat and Power Consolidated and certain of its employees, being members of the International Brotherhood of Electrical Workers, Local 492; Gas Workers Federal Labour Union No. 16571, and the International Association of Machinists, Lodge No. 631, an adjustment of the dispute between the parties had been effected. In the previous month, as noted in the last issue of the

LABOUR GAZETTE, a special representative of the Department had investigated the circumstances of the dispute, and as a result of his mediation negotiations were being resumed.

The settlement was in the form of a renewal of the last agreement, with the exception of some upward adjustments in wages of a few of the city stationmen, and that the agreement is for one year. The new agreement, when it has been received by the Department, will be outlined in the LABOUR GAZETTE.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Proceedings

SEVEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. A summary of the recent decisions of the Board is given in the following paragraphs. Summaries of earlier decisions appeared in the issue for March, 1925, and in previous issues.

Case No. 247.—Canadian National Railways (Atlantic Region) and the Order of Railroad Telegraphers.

A telegraph operator occupied an agent's dwelling provided by the company outside the station building, the agent at this point residing elsewhere. He was charged a rental of \$15 a month, without fuel or light perquisites, until January 1, 1925, when the rental was reduced to \$5 a month, this being the amount that the agent would have been charged had he occupied the building, receiving also free light and fuel.

The employees claimed that operators are entitled to the same consideration as agents, and that the operator in this case should be reimbursed all rental paid in excess of \$5, and be furnished with free light and fuel. The railways contended that as the dwelling was apart from the station building the agreement in this respect was not applicable to operators.

The Board decided that the operator during the continuance of the present agreement should have the same consideration as though he were an agent.

Case No. 248.—Temiskaming and Northern Ontario Railway Commission and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

The conductors and trainmen claimed payment for yarding trains at final terminals. After May 1, 1918, freight conductors in preparing trip tickets showed time for yarding trains over and above the miles run, the time claimed being mostly fifteen minutes or three miles. These claims were allowed by the railways up to June 1, 1924, but after that date they were disallowed. The Board decided that the time of arrival of a freight train at a final terminal, in so far as the pay of the crew as a unit is concerned, is the time at which the train has been placed on its designated track within yard limits and has been registered by the conductor. In accordance with the provisions of paragraph "B," Rule 12, of the governing agreement, and under past practice, members of train crews are entitled to pay for such time as they may be held on duty after the arrival time of the train as referred to. If time so held, combined with the trip as a whole, involves overtime, such time should be paid for in accordance with the overtime provisions of the agreement. The minimum time for relieving any member of a train crew at the objective terminal should be the time at which the conductor registers his train, delivers his bills and is relieved from duty.

Case No. 249.—The Kettle Valley Railway Company and the Brotherhood of Locomotive Engineers, and the Brotherhood of Locomotive Firemen and Enginemen.

An engineer and fireman were disciplined by the Company for tying up before the expiration of twelve hours on duty. This subject was dealt with in case No. 153 (LABOUR GAZETTE, April, 1923), when it was decided that under the conditions in that case crews would not be justified in tying up until after twelve hours' service. In that case, however, the decision was based on yard rule for a crew called for terminal switching. In the present case it was shown that the crews were called for road service, in which minima of one hundred road miles, or the equivalent thereof, were involved. It also appeared that under previous practice a road crew having made a minimum of one hundred road miles could not be required after arrival at a terminal to perform further if rest was desired, although it was admitted by the employees that such service should be required when for the purpose of handling perishable shipments.

The Board sustained the claim of the employees, finding that under the conditions indicated the application of discipline was not justified.

Case No. 250.—Canadian National Railways (Central Region) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

Members of a section gang claimed overtime rates of time and one-half for all time worked in a regular shift when the shift was changed from day to night time. They based their claim on a section of their wage agreement which provides that where only one shift is worked this shift shall commence between seven and eight a.m., and that when employees are required to work in excess of eight hours they are to be paid for overtime on an actual minute basis, at the rate of time and one-half. The company contended that the change was required by the conditions of the service, and that the sectionmen were only entitled to *pro rata* rates for work performed during their regular assigned hours.

The Board denied the claim of the employees for time and one-half, there being no schedule under which such a claim could be justified. However, in the absence of a rule that differentiates in rates of pay for day and night service, the Board concurred in the management's offer of an increase of two

cents per hour for sectionmen, and five cents per hour for section foremen, during the period the employees are required to work at night time; this increase to be effective as of August 1, 1924.

Case No. 251.—Canadian National Railways (Central Region) and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A sectionman claimed back pay for the time a junior employee had been engaged to fill a vacancy for summer work when seniority should have governed the employment. The Company denied that the Wage Agreement contained any provision that employees laid off are to be re-employed for extra summer work in order of seniority.

The Board sustained the contention of the employees provided that the seniority of the claimant was as stated. All monies earned in other employment during the period in question were, however, to be deducted from the amount claimed.

Case No. 252.—Canadian National Railways (Western Region) and the Order of Railroad Telegraphers.

A swing despatch was ordered by the railways to relieve the regular trick dispatchers at two points 247 miles apart, for one day in seven. The employees contended that the assignment involved working hours that were unreasonable and oppressive and in conflict with the clause of the schedule providing that "except in cases of emergency telegraphers will have eight consecutive hours' rest in each 24-hour period." They claimed further that their agreement never contemplated that a dispatcher would be required to travel so far between offices. The Company denied that any hardship existed, as the employee had ample time for rest between tricks.

The Board denied the claim of the employees that the terms of the schedule agreement provided for overtime payments under the conditions stated. However, in view of the conditions as developed in this case, and the evident feeling on the part of the employees that the assignment in question was unduly onerous and not in accord with the intent of the agreement as made regarding "swing" service, the Board recommended to the railways a further special consideration of the case, with a view either to the abolition of the assignment or to such changes in the hours of duty as would remove any hardship.

Case No. 253.—Canadian National Railways (Western Region) and the Order of Railroad Telegraphers.

The Telegraphers' schedule provides that "(a) at stations where dwelling, fuel and light are provided the dwelling will be reserved exclusively for the use of the agent and his family, unless he elects to reside elsewhere, in which event permanently appointed operators having a family will have the first refusal. (b) agents who are required by the railways to vacate living quarters will be allowed an increase in salary equal to what their fuel allowance is worth or be supplied with fuel."

An agent and his family occupied living rooms in a station, and while he was absent on leave the company converted one of the rooms into an office for the assistant superintendent. The remaining rooms became in consequence an undesirable place of residence and he vacated them. The employees claimed that the agent was entitled to compensation.

The Board sustained the employees' claim as to a salary adjustment from the date the agent vacated the dwelling, and recommended that the parties to the dispute should agree on a fair rate for the position.

Salary Saving Plan of Sun Life Assurance Company

The Sun Life Assurance Company of Canada, has recently announced a salary saving plan, which supersedes a salary deduction plan prepared by the same company. The new plan may be used in co-operation with employers having five or more employees on their payroll, as follows:—

Subject to the condition that the firm has at least five employees, one individual employee may be written provided the monthly premium is at least \$5. Where two or more employees apply for assurance the monthly premium payable by an individual employee may be less than \$5 provided that the total monthly premium payable by all the employees assured amounts to \$10 or more.

The minimum policy will be \$1,000, in accordance with the company's usual rules.

Where less than ten employees of one firm are assured under the plan, individual assurances will be granted up to \$5,000 without a medical examination, subject to the ordinary Non-Medical regulations governing limits of age, sex and plan of policy.

Where ten or more employees of a firm are written individual assurances will be accepted of the Non-Medical plan for amounts not exceeding \$10,000 within the limits of age, sex and plan of policy prescribed by the Non-Medical regulations. Although under the rules of the insurance company the Anticipated Dividend plan is not granted under Non-Medical regulations, exceptions may be made in particularly important cases where a large number of employees of one firm apply for assurance under the Salary Savings plan. Before rates on the Anticipated Dividend plan are quoted, however, authority must be obtained from Head Office.

The Non-Medical form will be used subject to the usual Non-Medical regulations, except as regards the increased limit of \$10,000. The maximum amount of assurance which will be carried by the Company at any time without medical examination upon an individual life, under the Salary Savings Plan or otherwise, is \$10,000. The amount of Non-Medical assurance already held by the applicant with the Company must therefore be considered, and in cases where the new assurance applied for, added to the total so held, brings the total to a figure exceeding \$10,000, a medical examination will be necessary.

An inspection report will be required in connection with all cases issued without medical examination under the Salary Savings Plan.

In cases where individual premiums amount to less than \$5 per month, but the total premiums on applications from the employees of the firm amounted to a total of \$10 monthly and in cases where individual assurances of \$10,000 on the Non-Medical basis are applied for conditionally on ten employees of the same firm taking assurance; a sufficient number of applications must be submitted together to show that the regulations in regard to these points have been complied with. The cashier's abstract must be noted to show that each application is one of a group of applications from employees of the same firm, and the total amount of assurance or the total amount of monthly premiums represented by the group of applications must be shown. Such group of applications will, so far as is possible, be kept together while passing through Head Office.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1925

THE number of strikes and lockouts in existence during July was 16, as compared with 19 during June. The time loss for the month was greater than in July, 1924, being 320,433 working days, as compared with 210,736 working days in the same month last year. The considerable time loss and number of employees in July, 1925, was chiefly due to a dispute in the coal mining industry of Nova Scotia.

Date	Number of disputes	Number of employees affected	Time loss in working days
July, 1925.....	16	12,882	320,433
June, 1925.....	19	13,906	313,179
July, 1924.....	19	8,701	210,736

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees, and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Twelve disputes, involving 12,125, work-people, were carried over from June. Three of the strikes and lockouts commencing prior to July, and one of the strikes and lockouts commencing during July, terminated during the month. At the end of July, therefore, there were on record twelve strikes and lockouts as follows: coal miners at Edmonton and Clover Bar, Alta.; coal miners, Nova Scotia; cigarmakers at Montreal; hat and cap makers at Montreal; hat and cap makers at Toronto; fur workers at Montreal; fur workers at Toronto; papermakers at Fort William; printing compositors and stereotypers at Edmonton; moulders at Owen Sound; upholsterers at Montreal, and riveters at Lauzon, Que. The record does not include minor disputes as described in the previous paragraph, nor does it include any dispute which the union or organization concerned has not yet called off, although information has been received indicating that employment conditions are no longer affected thereby. Information is available as to six such disputes, namely, clothing workers (ladies' garment workers), Toronto, commencing February 5; moulders at Galt, August 2, 1922;

moulders at Guelph, June 2, 1924; moulders at Hamilton, January 30, 1925; moulders at Sarnia, March 3, 1925; and street railway employees at St. John, June 29, 1921.

Information was received in the Department, too late for insertion in the July issue of the LABOUR GAZETTE, of a strike of upholsterers at Montreal, which commenced June 27, and remained unterminated at the end of July.

Of the disputes which began during July, two were against a reduction in wages, one was for other causes affecting wages and working conditions, and the fourth involved a question of union jurisdiction. Of the strikes and lockouts which terminated during July, two were in favour of employees, and two ended in a compromise.

The following notes give information in regard to certain disputes additional to that shown in the tabular statement.

COAL MINERS, EDMONTON AND CLOVER BAR, ALBERTA.—A cessation of work affecting five mines and involving 400 coal miners, occurred at Edmonton and Clover Bar on July 1, against a reduction in wages of 20 per cent on contract rates and 10 per cent on day rates. Previous to declaring a strike various meetings were held between the miners' representatives and the operators, but no settlement was arrived at. The miners offered to accept a reduction of seven per cent, but this the operators declined to consider. Soon after work had ceased a Fair Wages Officer of the Department of Labour visited Edmonton and district and after a conference with the parties to the dispute an understanding was reached whereby the employees in two mines returned to work under the former scale, further negotiations to be held with a view to a new contract. As a result of these negotiations an agreement was reached, subject to ratification by a vote of the miners, providing for certain improvements in working conditions and for reductions in wages of 10 per cent for day wage men, and for 13 per cent in contract rates. This agreement was rejected by a vote of the miners, 48 being in favour of it with 122 against. As affecting the other three mines in the district however the situation remained unsettled at the end of July.

COAL MINERS, NOVA SCOTIA.—An account of events in this dispute is given in a special article on page 771.

HAT AND CAP MAKERS, MONTREAL, QUE.—A strike of 75 hat and cap makers in the employ of six firms, occurred on July 30,

when the employers refused to renew the agreement expiring July 31, or to negotiate with the union for a new agreement. The employees were willing to sign up' on the same lines as contained in the old agree-

ment, with the exception of certain adjustments for lower paid employees. They also desired the 44-hour week. At the end of July this strike remained unsettled.

HAT AND CAP MAKERS, TORONTO, ONT.—On

STRIKES AND LOCKOUTS DURING JULY, 1925.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to July, 1925			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Nova Scotia.....	11,463	298,038	Commenced March 6; failure to agree on certain changes in wages, and stoppage of credit at company's stores. Unterminated.
MANUFACTURING—			
<i>Tobacco and liquors:</i>			
Cigarmakers, Montreal, Que...	5	130	Commenced March 24; against a reduction in wages. Unterminated.
<i>Clothing, including knitted goods:</i>			
Hat and cap makers, Toronto, Ont.	8	248	Commenced June 16, for recognition of the union. Unterminated.
<i>Fur and leather products (other than boots and shoes:)</i>			
Fur Workers, Montreal, Que...	322	8,372	Commenced April 1, failure to agree on certain changes in agreements and on proposed substitution of separate agreements. Unterminated.
Fur workers, Toronto, Ont....	4	104	Commenced February 20, for recognition of the union. Unterminated.
<i>Pulp and paper:</i>			
Papermakers, Fort William, Ont.	13	338	Commenced May 20, for renewal of agreement without changes in working conditions. Unterminated.
<i>Printing and publishing:</i>			
Printing compositors and stereotypers, Edmonton, Alta.	16	416	Commenced June 19, against a reduction in wages. Unterminated.
<i>Saw and planing mills:</i>			
Tie peelers, Edmonton, Alta...	130	650	Commenced June 26, for increased wages. Settled by negotiations and work resumed July 8; compromise.
<i>Iron and steel products:</i>			
Moulders, Owen Sound, Ont...	10	260	Commenced January 19, against a reduction in wages. Unterminated.
<i>Miscellaneous:</i>			
Upholsterers, Montreal, Que...	41	1,066	Commenced June 27, for improved working conditions. Unterminated.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Plasterers, Toronto, Ont.....	13	78	Commenced June 8, as to union jurisdiction. Settled by negotiations and work resumed July 9.
<i>Shipbuilding:</i>			
Shipbuilders, Vancouver, B.C.	100	700	Commenced June 16, for increased wages. Settled by negotiations and work resumed July 9; compromise.
(b) Strikes and Lockouts commencing during July, 1925			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Edmonton and Clover Bar, Alta.	400	9,451	Commenced July 1, against a reduction in wages. Unterminated.
MANUFACTURING—			
<i>Clothing, including knitted goods:</i>			
Hat and cap makers, Montreal, Que.	75	150	Commenced July 30, failure to renew expiring agreement or to negotiate for a new one. Unterminated.
CONSTRUCTION—			
<i>Buildings and structures:</i>			
Carpenters, painters, plumbers, Kingston, Ont.	30	54	Commenced July 2, as to union jurisdiction. Settled by negotiations and work resumed July 7.
<i>Shipbuilding:</i>			
Riveters, Lauzon, Que.	252	378	Commenced July 30, against a reduction in wages. Unterminated.

June 16, a strike occurred of some 200 hat and cap makers in the employ of twelve firms for the establishment of union standards. At the end of July, two shops alone remained on strike involving about eight workers, the other shops which were involved at the beginning of the trouble having signed agreements and conceding all the strikers' demands.

TIE PEELERS, EDMONTON, ALTA.—The strike of 130 tie peelers which commenced June 26, for an increase in the price of ties, terminated July 8, after a compromise had been effected. Five cents was to be paid for dry ties, and four and one-half cents per tie for green ties, as well as a bonus of one-half cent for green ties to be paid at the end of each month.

UPHOLSTERERS, MONTREAL, QUE.—On June 27, a cessation of work occurred affecting 41 upholsterers. The trouble arose when the workers demanded improved working conditions. At the end of July this strike remained unterminated.

CARPENTERS, PAINTERS AND PLUMBERS, KINGSTON, ONT.—A strike of 30 carpenters, painters and plumbers occurred at Kingston on July 2, and following days, because an ornamental iron contractor would not employ steamfitters to erect iron railings, and also because labourers were engaged to put in chains whereas the carpenters claimed this was their work. Negotiations were carried on and it was finally decided each craft would perform their own share of the work, and the strike was terminated July 7.

PLASTERERS, TORONTO, ONT.—A strike of 13 plasterers which began in Toronto on June 8, terminated July 9. The trouble arose over the question of union jurisdiction as between the Operative Plasterers and Cement Finishers' International Association, and the Bricklayers, Masons and Plasterers' International Union. This strike spread from the United States to Toronto and was settled, pending adjustment by arbitration, by the Bricklayers, Masons and Plasterers' International Union agreeing that on all plastering and cement finishing work on all new building operations workmen would be employed who were affiliated with the Operative Plasterers and Cement Finishers' International Association.

RIVETERS, LAUZON, QUE.—Two hundred and fifty-two riveters employed at Lauzon, Que., ceased work at noon, July 29, following a discussion over wages to be paid riveters for piece work. The union demanded \$3 per hundred rivets, but the company declined to pay more than \$2.70 per hundred rivets.

Negotiations were carried on and the riveters agreed to accept \$2.85 per hundred rivets, but this also was refused by the company. This dispute remained unterminated at the end of July.

SHIPBUILDERS, VANCOUVER, B.C.—On June 16, 100 employees in ship repairing establishments, boilermakers, riveters, etc., went on strike for an increase in wages. After being on strike nearly three weeks a compromise was effected as the result of negotiations, and work was resumed July 9, at an increase of 50 cents per day.

Fair Wage Clause in South African Government Contracts

A fair wage clause is now inserted in contracts in connection with government work in the Union of South Africa, as follows:—

"The contractor shall pay rates of wages and observe hours of labour not less favourable than those commonly recognized by employers and trade societies (or, in absence of such recognized wages and hours, those which in practice prevail amongst good employers) in the trade in the district where the work is carried out. Where there are no such rates of wages and hours recognized or prevailing in the district, those recognized or prevailing in the nearest district in which the general industrial circumstances are similar shall be adopted. Further, the conditions of employment generally accepted in the district in the trade concerned shall be taken into account in considering how far the terms of this clause are being observed."

Profit Sharing Instead of Overtime Pay

The employees of James Pender and Company, Limited, of Saint John, N.B., a subsidiary of the British Empire Steel Corporation, manufacturing nails and wire, have expressed their willingness to work overtime without pay in order to permit the company to compete with foreign manufacturers in export markets. The matter was discussed in one of the council meetings between the management and employees of the company. The provision is made that should any profits accrue from the export business under this arrangement, the men are to receive 75 per cent of the profits. It is planned that for a start the men are to put in three extra hours every other evening. About 80 men are affected by the arrangement.

SETTLEMENT OF DISPUTE IN THE MINING INDUSTRY IN NOVA SCOTIA

THE dispute involving some 11,000 coal miners in Nova Scotia in a cessation of work from March 6, remained unsettled at the end of July, but terminated early in August. On July 3, the President of District 26 announced that the United Mine Workers were prepared to put maintenance men in all Nova Scotia collieries whenever the British Empire Steel Corporation asked for them. On July 7, an inquiry, ordered by the Provincial Attorney-General into the death of the miner killed in riots of June 11, was opened at New Waterford, and was adjourned from time to time until about July 24, when a warrant was issued for the arrest, on a charge of murder, of a British Empire Steel Corporation policeman, who was still in hospital suffering from injuries received during the riots. About July 9, the mayors of six Nova Scotia mining towns met at Sydney and passed a resolution asking the Honourable E. N. Rhodes (premier-elect), to ensure the immediate resumption of mining operations, and to extend financial relief to those suffering extreme want. One of the first official acts of the new provincial Premier was to enter into a conference on July 16, with the president and vice-president of the corporation. No information was given out concerning the conference, but the Premier later communicated to the President of District 26, United Mine Workers of America, the fact that he had met the heads of the corporation, and expressed the hope that the United Mine Workers would join him in securing a resumption of negotiations. On July 17, the provincial police, who were brought to the scene of the dispute on June 11, were ordered to be withdrawn from Cape Breton and disbanded by Order-in-Council. On July 20 the Premier accompanied by the Minister of Mines, reached Sydney in order to confer with representatives of both parties. The president and vice-president of the corporation were present at the conference, as well as practically the entire District Board of the United Mine Workers. On the morning of July 30, the president and vice-president of the corporation again met the Premier in Halifax, the members of the District Board of the United Mine Workers being available in the event of a decision to resume joint negotiations. On August 1, the Premier submitted a final proposal to both parties concerned in the dispute. This was accepted by the Executive of District 26, and was sub-

mitted to the various locals. The following memorandum was submitted by Premier Rhodes to the President of the British Empire Steel Corporation and to the President, District 26, United Mine Workers of America.

TEXT OF MEMORANDUM

The Government is convinced that the present intolerable conditions throughout the province, due to the deplorable position of the coal mining industry, can be overcome now only by some agreement founded upon mutual concessions made by all parties for the common public interest. Such an agreement cannot be taken as a disposition of the rights and equities involved for they are too complex and diverse satisfactorily to be dealt with other than in the light of a full inquiry into the coal trade of Nova Scotia. It may be accepted, however, as a working basis for the resumption of operations which must resume at once to avoid disorder in the province; and where concessions have been made it is postulated that they have been made at the request of the Government and for the general benefit of the people of Nova Scotia.

In this spirit the Government commends to the corporation and to the union the undertaken outline of settlement, and its acceptance should be the bounden duty of all the parties interested in order to alleviate distress within the province, to protect the presently endangered property and interests of the crown in the coal areas of the province, and to relieve the provincial treasury from the present deadly drain upon it.

(a) An interim contract between the corporation and the union for the period of six months pending a full enquiry into the coal industry of Nova Scotia.

(b) Terms of the contract to be those of the 1924 contract.

(c) The wage scale to be that of 1922 contract, which it is estimated is between six and eight per cent below the scale of 1924.

(d) Employment to be given to regular employees at the mines, shops, piers and other departments of the company before outside labour is engaged.

(e) In consideration of the immediate resumption of work under the foregoing provisions, the Government is prepared to rebate one-fifth of the royalties payable to it upon coal mined by the corporation from the date of the commencement of the above agreement for a period of twelve months.

(f) The corporation has introduced the matter of the check-off as a point to be considered immediately, although it was not an issue when the present dispute commenced. It affirms that although it is a right or privilege exercised by the workmen for a period of about forty years and recognized by the laws of the province, yet a majority of the workmen are opposed to it. Therefore the Government will hold a referendum by secret ballot to determine whether the check-off be continued or not. Both sides agree to abide by the result.

(g) All controversial points not disposed of above to be referred to the commission of enquiry for investigation.

Miners' Acceptance

In agreeing to the Government proposals, the district board made the following statement to Premier Rhodes:—

The district executive board of the United Mine Workers has given careful consideration to the proposal for settlement, submitted by the Premier and Members of the executive council.

The district board has from time to time received definite instructions from the membership in reference to wage rates, terms of contract etc., and recognize that this proposal embodies great concessions on the part of the mine workers, yet as evidence of the sincere desire of the district board to agree to a settlement of the present dispute by certain concessions, it is the unanimous decision of the district board to agree to recommend to the membership, for their acceptance, the proposal as outlined in the memorandum submitted by the Premier.

The district board desire to state plainly that this decision to recommend the proposal for acceptance as a basis for the resumption of operations is at the direct request of the Government, and is not to be construed as a final disposal of the rights for which the men are contending.

The district board has been influenced in this decision by the assurance by the Government that a thorough enquiry will be made into the coal industry and our interpretation of this pledge is that we believe a full, free and fair opportunity should be afforded to establish and prove our contention that the coal industry in Nova Scotia is making ample profits that should ensure higher wages than the 1924 rates.

In conclusion, the unanimous decision of this executive board of district No. 26 of the United Mine Workers of America is that in view of all the circumstances surrounding the present dispute, that this proposal offered by the Government on their responsibility, as a final solution, is hereby accepted for reference to membership for ratification.

Statement by District President

In releasing the text of the executive's reply to the proposal of the Government, John W. MacLeod, district president, on behalf of the district executive gave out the following statement:—

The district executive in deciding to accede to the request of the Government that the terms laid down in what was represented to their ultimate offer be recommended for acceptance by the membership were actuated by the following considerations:

(1) Their belief that the resumption of work under an arrangement that contains within it the promise of more satisfactory conditions eventuating with the expiration of the interim contract is of vital importance at this juncture.

(2) The Government's assurance and our insistence that the proposed interim contract, if finally ratified, will be entered into without prejudice to the contentions of the men which still remain to be finally passed upon by an independent commission, fully clothed with authority to conduct a searching enquiry into the entire situation.

(3) The conviction that while the concessions the men have been called upon to make are great, a fair enquiry into the merits of the dispute will disclose the soundness of the miners' position and consequently enforce better wage and working conditions.

(4) The knowledge that while the men are well able to continue the struggle for an indefinite period there is merit in the contention that the interests of the general public demand the immediate resumption of work and that these interests are entitled to consideration by both parties to the dispute.

When the conferences were resumed at Sydney last week the demands of the corporation included a 25 per cent cut for three months, a 15 per cent cut thereafter, and the abolition of the union check-off, which if enforced would have meant the return of

the men to a condition of serfdom. Moreover, the corporation contended throughout the negotiations that it could enforce the economic pressure necessary to grind the communities affected into submission.

The Government, which has been charged by the electorate with the responsibility of settling the dispute, on the other hand, after failing to bring about a settlement by negotiation, has made a proposal, based on its knowledge of these negotiations, which it believes to be just as a temporary arrangement.

The Government has assured us it is prepared to back up this proposal to the limit, and at the Premier's request we have decided to recommend its acceptance as our contribution to the general welfare of the province, as well as the wisest course open to us at this time.

On August 5, a vote was taken by the different locals which resulted in the proposals contained in the foregoing memorandum being accepted by the mine workers by a majority of 1,133. The Corporation also accepted the terms suggested by the Premier, and an early resumption of work having been made possible by the signing of a contract between the British Empire Steel Corporation and its workers on July 7, work was resumed on August 9.

8-Hour Day in Oil Industry in the United States

The Standard Oil Company of New Jersey, the largest company of the Standard Oil group, has established an eight-hour workday in the producing fields. A twelve-hour day has been in effect in the mid-continent field and other prominent fields since the first oil well was drilled sixty-six years ago. It is stated that the shorter working day will not only benefit the men but also the companies due to the increased efficiency of the men under the new schedule, and that just as the steel companies followed the lead of the United States Steel Corporation in eliminating the twelve-hour day in the steel industry, so the majority of oil companies will have to follow the lead of the Standard Oil Company of New Jersey, which is the largest factor in the petroleum industry.

Thousands of workers will be affected, since the order applies to all the Standard's fields. The only exception will be made in outlying fields, where camps must be built and where men may work to get under shelter rather than remain idle after their eight hours are up. The railways have long had the eight-hour day. Many crafts, units and workers have worked eight hours for years. The shorter working hours are almost universal now in both unorganized and organized industries. The New York *Times* points out that "it is in this field that union labour has done much for the worker. The eight-hour day is due to unionism more than any other pressure."

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING JUNE

The British *Ministry of Labour Gazette* for July contains the following table which analyses the disputes in progress in June, 1925, in Great Britain and Northern Ireland by groups of industries, and indicates the number of workpeople involved at the establishments concerned, and the approximate time lost during the month in all disputes in progress:—

Groups of industries	Number of disputes in progress in June			Number of workpeople involved in all disputes in progress in June	Aggregate duration in working days of all disputes in progress in June
	Started before June 1	Started in June	Total		
Mining and quarrying.....	12	12	24	18,000	197,000
Metal, engineering and shipbuilding.....	5	9	14	1,000	12,000
Transport.....	1	5	6	6,000	14,000
Other.....	13	22	35	9,000	58,000
Total, June 1925....	31	48	79	34,000	281,000
Total, May 1925....	34	47	81	27,000	202,000
Total, June 1924....	35	57	92	50,000	356,000

Of the 48 disputes beginning in June 7, directly involving 9,000 workpeople, arose out

of proposed reductions in wages; 21, directly involving 4,000 workpeople, on other wages questions; 10, directly involving 5,000 workpeople, on questions respecting the employment of particular classes of persons; 8, directly involving 6,000 workpeople, on questions of trade union principle; and 2, directly involving 100 workpeople, on other questions. In addition, about 8,000 workpeople were involved, either directly or indirectly, in 31 disputes which began before June and were still in progress at the beginning of that month. The number of new and old disputes was thus 79, involving about 34,000 workpeople, and resulting in a loss during June of about 281,000 working days.

Settlements were effected in the case of 28 new disputes, directly involving 17,000 workpeople, and 15 old disputes, directly involving 2,000 workpeople. Of these new and old disputes, 13, directly involving 7,000 workpeople, were settled in favour of the workpeople; 16, directly involving 6,000 workpeople, in favour of the employers; and 14, directly involving 6,000 workpeople, were compromised. In the case of 5 disputes, directly involving 3,000 workpeople, work was resumed pending negotiations.

Mining in Great Britain in 1924

The fourth annual Report of the Secretary for Mines of Great Britain for the calendar year 1924 states: "A year of prosperity in 1923, with an output second only to that of 1913 and exports exceeding even those of that 'record' year, was followed in 1924 by a year of gradually deepening depression. The boom of the preceding year had been caused by the dislocation of the Rhur coalfield; the resumption of normal production in that coalfield shattered it, and the position would have been even worse had not home demand improved. Output fell by 9 million tons and exports by nearly 19 million tons. Values at the beginning of the year were good, but they subsequently declined. On balance, they showed little change from the previous year, for, while export prices were lower, inland prices were higher. The earnings of the work-ers were slightly higher than in 1923."

The output of saleable coal in 1924 was 267 million tons, as compared with 276 million tons in 1923, and nearly 287½ million tons in 1913. The output of 1924 was exceeded on only four occasions, namely in 1907, 1911, 1913, and 1923.

The number of unemployed insured workpeople fell at one time during the early part of the year to 2.0 per cent; but from June onwards employment was affected by trade depression, and the year closed with an unemployment percentage of 7.9 (after being 10.3 per cent at the end of October).

The number of wage-earners on colliery books was 1,193,668 at the middle of May, the highest number recorded since the resumption of work at the mines after the national stoppage in 1921. By the middle of November the number had fallen to 1,135,380, but increased subsequently to 1,137,173 at the end of the year, as compared with 1,184,786 at the end of 1923.

The combined figures for the coalfields as a whole show that the gross proceeds per ton, averaged over the year, were 19s. 10½d., the same as in 1923; and that the sums available for wages and profits were also substantially the same in the two years, viz., 14s. 6½d. per ton in 1923, and 14s. 5d. in 1924. Whereas, however, in 1923, 12s. 4½d. per ton went to wages, and 2s. 2d. remained for profits in 1924, 13s. 3d. per ton went to wages, and 1s. 2d. to profits.

LABOUR LEGISLATION IN CANADA IN 1925

Measures Enacted at Recent Session of Nova Scotia Legislature

THE fifth session of the Thirty-seventh General Assembly convened in the Province of Nova Scotia opened on February 26 and concluded on May 7, several measures of interest to labour being enacted. Accounts of recent labour legislation in Canada have appeared in the *LABOUR GAZETTE* as follows:—British Columbia, January, 1925; Saskatchewan, February, 1925; Alberta, June, 1925; Manitoba, May, 1925; Quebec, Ontario and Alberta, June, 1925; Nova Scotia (Industrial Peace Act), May, 1925; New Brunswick, July, 1925; Parliament of Canada, July, 1925; Industrial Disputes Investigation Act, June, 1925.

Industrial Peace Act.—The most outstanding act affecting labour was the Industrial Peace Act, of which a full account was given in the May issue of this *GAZETTE*. It will be recalled that this Act has two objects; first, the re-enactment of the Dominion Industrial Disputes Investigation Act, 1907, as a Provincial Act, and secondly, to re-enforce and supplement that Act by machinery for the compulsory arbitration of labour disputes not settled under it. The first part of the Act is purely the "Lemieux Act" with such incidental variations as are necessary from the fact of its being a provincial rather than a Dominion measure. It provides that where a dispute has arisen in a mining industry or in connection with a public utility, either party, or the Minister of his own motion, may have it referred to a Board of Conciliation and Investigation appointed by the Minister of Works and Mines, and that pending the report of the Board neither party can declare a lock-out or strike or alter the conditions of Labour. After a report has been filed, however, neither party is bound thereby, and no machinery is provided for its enforcement. The second part of the Act, which will not become effective until it has been proclaimed by the Governor in Council as being in force, is designed to supply the lack of compulsory powers. It provides for the creation of a permanent Arbitration Commission. If within a month from the filing of the Report of the Board of Conciliation under the first part no settlement is arrived at, either party may have the dispute referred to the Commission, which will then inquire exhaustively into all phases of the dispute and all relevant facts affecting both the employer and employees. After such reference to the Commission any strikes, lock-outs or alterations of conditions are declared

to be illegal under penalties. The award of the Commission is binding on all the parties to a dispute and may be made an order of the Supreme Court and enforceable accordingly. In connection with this Act attention was called to the fact that the principle of compulsory arbitration of labour disputes has already been recognized in "The Conciliation Act" and "The Miners' Arbitration Act."

Coal Mines Regulation.—The Coal Mines Regulation Act was amended in the section which provides for the holding of inquiries into charges of incompetence or misconduct on the part of persons holding certificates under the Act, the amendment providing that the minister or persons authorized by him (instead of the Commissioner of Public Works and Mines) shall have full powers under the Public Inquiries Act to hold such inquiries.

Contributory Negligence.—An Act "to amend the Law as to Contributory Negligence" is a copy of the Ontario Act of 1924. It provides that in any action or counter-claim for damages founded on negligence, where contributory negligence is established, the jury shall find the entire amount of the damages to which the plaintiff would have been entitled without such contributory neglect, and the degree in which each was in fault, so that the plaintiff shall recover only so much as is proportionate to the degree of fault imputable to the defendant; and if it is not practicable to determine the respective degrees of fault the defendant shall be liable for one-half the damages sustained.

It was explained that "this Act effects a revolutionary and much-needed reform in a very important class of litigation. Under the present law in an action of negligence the defendant is entitled to show, and usually does, that the plaintiff was also guilty of negligence contributing to the damage. If such contributing negligence is found to have been the proximate cause of the damage, the plaintiff will be precluded from recovering anything in the action, though as a matter of fact the defendant may have been almost equally to blame. The situation is aggravated by the fact that the Common Law doctrines as to negligence have become so abstract and technical that judges experience great difficulty in expounding them to juries. Many judges have advocated the adoption of the rule obtaining in Admiralty cases as being more equitable, namely, that where by the fault of

two or more vessels damage is caused to one or more of them the liability to make good the damage shall be in proportion to the degree in which each vessel was at fault. This rule is contained in the Maritime Conventions Act of 1911 and a similar doctrine prevails in Quebec."

Life Insurance.—An Act was passed "to make uniform the law respecting life insurance contracts." Some years ago the Commissioners on Uniformity of Legislation of the Canadian Bar Association after much discussion and many conferences with insurance experts prepared a Uniform Life Insurance Act and recommended its adoption in all the Provinces. All the provinces except Quebec have now enacted it, and with the passing of an act in New Brunswick the legislation on this subject becomes uniform throughout the English-speaking provinces of Canada. The Nova Scotia Act makes no substantial change in existing law. It applies to all contracts of life insurance hereafter made and to unmatured obligations of every contract already made in Nova Scotia. Its provisions also apply to contracts of accident and sickness insurance.

Co-operation.—The Act providing for the incorporation of farmers' fruit, produce, and warehouse associations was amended in regard to the powers of the directors, who were given authority to cancel the stock of any shareholding company neglecting after 60 days' notice to pay calls payable on shares held by the company.

Education.—Amendments to the Education Act enabled the wives of ratepayers of school sections to attend and vote at school meetings, and provided that the Council of Public Instruction may annually pay to Federated High School Departments a sum based on the daily attendance of pupils in such School. The title given to the Director of Technical Education in connection with the Technical College was changed from principal to president.

The opening speech from the Throne referred to the progress of education in the Province as follows:—"A noticeable feature in educational work has been the increased average attendance of pupils in our schools, and the greater number of days during which schools remained open. As a result of the action of the Government common school text-books are now being furnished to pupils at approximately one-half their actual cost. In technical education, continued interest is shown by the attendance at the short courses for industrial workers, and by a material increase in the number of students who take advantage of the correspondence study

courses. The Technical College at the close of the past session graduated the second largest class of engineering in its history, and the standard of technical education generally was maintained at the same high level of efficiency, with an appreciably reduced expenditure.

Superannuation of Normal School Teachers.

—The section of the Education Act of 1918 providing annuities for retiring or incapacitated school inspectors and normal college teachers was amended to include also teachers in the Agricultural College. The Premier announced that the Government was considering the advisability of providing pensions for retiring employees of the Province.

Encouragement of Zinc and Coal Mining.

—An Act was passed providing for the waiving by Order in Council of the province's right to royalties on minerals mined by the American Cyanamid Company provided the company develops its leased tracts within a reasonable limit of time.

An amendment to the Mines Act fixed the amount of royalty otherwise payable on zinc at 2 cents upon every unit, that is, upon every one per centum of zinc contained in each long ton of zinc ore sold, smelted or shipped.

The Act of 1920 "to encourage the making of iron and steel from native ores" was amended in regard to the requirement that a company benefiting by the Act shall produce ore "50 per cent of which is mined in the province," this proportion being reduced to 25 per cent of the total amount mined.

Hospital Treatment.—An "Act relating to Local Hospitals" provides that the support and maintenance of pauper patients admitted to hospitals shall be chargeable to the municipality in which they have a settlement, but the liability shall not exceed two dollars per day. Hospitals are obliged to admit patients having a settlement in any municipality granting aid to it, but they may refuse others seeking admission, and "nothing in the Act shall require any hospital to receive patients suffering from pulmonary tuberculosis," such patients being otherwise provided for. Another Act enables the Governor-in-Council after April 1 to advance to Local Hospitals, on account of aid for the current fiscal year, one-half of the aid granted for the previous year.

Community Halls.—A Community Act, based on similar legislation in Ontario (Statutes of 1920, chapter 72, amended 1924, chapter 64) enables a municipal council, upon the requisition of the residents of any school

section, to pass a by-law for the establishment of a community hall to be used for social, educational and community purposes. The council can provide for the acquisition of property and raise the necessary funds by the issue of municipal debentures. The property will be vested in the municipality, and the hall will be managed by a board appointed by the council.

Powers of Council.—An Act affecting the constitution and powers of the upper house was enacted, amending chapter 2, Revised Statutes "Of the Constitution Powers and Privileges of the House." The amending act provides that "every member of the Council hereafter appointed shall hold his seat in the Council for the term of ten years from the date of his appointment, provided that where any such member attains the age of seventy-five years his seat in the Council shall thereupon become vacant." The Act further provides that public bills other than money bills and bills dealing with the constitution, powers and privileges of the House, may become law without the concurrence of the council in three successive sessions. As originally introduced the bill would have enabled the lower house to abolish the council without the concurrence of the upper house by passing the bill at three consecutive sessions of the assembly.

Provincial Rights.—An Act was passed authorizing the Governor in Council to appoint a commission to inquire into and concerning what interests of Nova Scotia, and in what respects such interests, have been prejudiced by the economic system of the Dominion and to report thereon. The Commission will have all the powers and privileges of a Commissioner under "The Public Inquiries Act." The act contemplates application to the Dominion Parliament for appropriate redress and equitable remedies.

Licensing of Professional Engineers.—The Engineering Profession Act was amended in the sub-section which permitted the admission to the association of newcomers who were members of associations outside the Province, such admission being made subject to the opinion of the majority of the members that the requirements of the outside association are equivalent to those in Nova Scotia.

Miscellaneous Acts.—The "Load of Vehicles Act" was amended to provide that commercial motor vehicles operating on the public highways must be equipped with pneumatic or solid rubber tires of certain widths graded according to the weight of the vehicle when loaded to its carrying capacity. The amendment applies only to tires that were not being used before May 7.

By an amendment to the "Towns' Incorporation Act" the mayor of every incorporated town beginning with the next elections in February, 1926, will hold office for two years instead of one as hitherto.

The "Assessment Act" was amended so that a council may provide that interest not exceeding six per cent shall be paid on rates and taxes unpaid after the date fixed for collection. The lien for rates and taxes was extended to six years instead of three. Collectors and constables may under a warrant of distress for non-payment of rates and taxes levy on and sell timber, wood, poles, grass or other materials on the land.

Bills Not Passed

Eight Hour Day Bill.—A bill introduced in April by Mr. Joseph Steele, the labour representative of Cape Breton, would have established an 8-hour day in the steel and building industries. Mr. Steele explained that the bill, while applying to all steel and building labour in the incorporated towns and cities in Nova Scotia, had particular reference to the steel plant in Sydney, where he declared the men worked 11 and 14 hours a day with 24 hour shifts once every two weeks. The Premier pointed out that at that time the whole question of limiting the daily hours of labour was being studied by the Department of Labour at Ottawa and that the Supreme Court of Canada would decide upon whether regulations of working hours was a responsibility of the Provincial Governments or the Federal. Until that point was decided he thought it unwise and out-of-place for the local government to take any action. (The decision of the Supreme Court of Canada on this question was published in the last issue of the LABOUR GAZETTE). The bill was defeated on its second reading by 13 votes to 6.

Workmen's Compensation.—Another measure which failed to pass was a bill to amend the Workmen's Compensation Act, introduced by Mr. Forman Way, labour member for Cape Breton. The bill sought to increase the benefits provided under the act for workmen or their dependants. It would have increased the rate of benefits payable to a workman injured in the coal mines from 55 per cent to 65 per cent of his annual rate of wages; and provided further that the maximum upon which this indemnity might be levied be increased from \$1,200 to \$2,000; it would also have increased the burial allowance for miners killed at work from \$75 to \$100, the allowance for widows from \$30 to \$40 per month and the allowance for children under 16 years from \$7.50 to \$10.

MINIMUM WAGES FOR FEMALE EMPLOYEES IN ALBERTA

New Regulations Fixing Hours of Work in Various Industries

THE Minimum Wage Board of Alberta issued on June 20 a series of six orders fixing the minimum wages and the minimum hours of work for female employees in various occupations in the province to become effective on August 1, 1925. A new feature of these orders is contained in the sections fixing the hours of labour. The act of 1922 enabled the Board to fix periods of employment and shifts for different classes of employees, and in 1924 its powers were enlarged to enable it further

to increase temporarily the working hours for any class of employees and to determine the rate of pay for such overtime; also to increase temporarily the number of apprentices in a particular trade or occupation.

The new regulations apply to the following cities and towns: Calgary, Edmonton, Lethbridge, Medicine Hat, Red Deer, Wetaskiwin, Blairmore, Camrose, Cardston, Coleman, Drumheller and Redcliff.

Order No. 1, governing female employees in manufacturing industry

The industries covered by this order consist in the making, preparing, altering, repairing, ornamenting, printing, finishing, packing, assembling parts of, and adapting for use or sale any article or commodity. The minimum rate of wages for experienced female employees is \$12.50 per week.

Rate of wages for apprentices:

(a) All female apprentices employed in meat packing, seed packing and tea packing establishments, any business, trade, calling or occupation in which any of the articles or commodities mentioned in the following list are manufactured, prepared or adapted for sale or use, bags, baking powders, beds, bed springs, buttons, cans, clothes pins, coffee, corn brooms, cream and milk products, drug and toilet preparations, explosives, extracts, gas mantels, honey, ink, jelly powders, macaroni, matches, molasses, munitions, pails, paint, peanut butter, roofing, sauces, soap, soft drinks, spices, sugar, sweeping compounds, syrups, toys, varnish, vermicelli, wash boards, whisks, yeast, biscuits, brushes, candy, and any other manufacturing industry not enumerated in these schedules shall be paid wages at a rate not less than—

\$6 per week for the 1st, 2nd and 3rd months;

\$8 per week for the 4th, 5th and 6th months;

\$10 per week for the 7th, 8th and 9th months,

after which she shall be paid not less than the minimum rate of \$12.50 per week.

(b) All female apprentices employed in photographic studios or any business, trade, calling or occupation in which any of the articles or commodities mentioned in the following list are manufactured, prepared or adapted for use or sale, awnings, bedding, mattresses, men's neckwear, overalls, shirts, tents, umbrellas, water-proof clothing, window shades, caps, carpets, cigars, elastic goods,

furniture, gloves, hats (other than millinery), hosiery, ladies' and children's wear, leather goods, regalia, rugs, boots and shoes, dipped chocolates, draperies, furniture covering, men's ready-to-wear clothing, paper boxes, garment alterations, jewellery manufacturing, knitting factories, or any allied industry, shall be paid wages at a rate not less than—

\$6 per week for the 1st, 2nd, 3rd and 4th months;

\$8 per week for the 5th, 6th, 7th, and 8th months;

\$10 per week for the 9th, 10th, 11th and 12th months,

after which period she shall be paid not less than the minimum rate of \$12.50 per week.

(c) All female apprentices employed at book-binding, embossing, engraving and printing, shall be paid wages at a rate not less than—

\$7 per week for the 1st, 2nd, 3rd, 4th, 5th and 6th months;

\$9 per week for the 7th, 8th, 9th, 10th, 11th and 12th months;

\$11 per week for the 13th, 14th, 15th, 16th, 17th and 18th months,

after which period she shall be paid not less than the minimum rate of \$12.50 per week.

(d) The following rules apply to dressmaking, tailoring and fur-sewing apprentices—

\$6 for the 2nd, 3rd and 4th months;

\$8 for the 5th, 6th, 7th and 8th months;

\$10 per week for the 9th, 10th, 11th and 12th months,

after which period she shall be paid not less than the minimum rate of \$12.50 per week.

(e) The following rules apply to millinery apprentices:

\$4 per week for the 2nd and 3rd months;

\$6 per week for the 4th, 5th and 6th months;

\$8 per week for the 7th, 8th and 9th months;

\$10 per week for the 10th, 11th and 12th months,

after which period she shall be paid not less than the minimum rate of \$12.50 per week.

Hours.—No person, firm or corporation shall employ a female or suffer or permit a female to be employed in any factory or workroom in the making, preparing, altering, repairing, ornamenting, printing, finishing, packing, assembling parts of, adapting for use or sale any article or commodity for a greater number of hours than nine in any one day or forty-eight in any one week; provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

Deductions.—Where the usual hours of employment in any establishment in a week are forty or more, in the event of the employment of any employee for less than the usual hours in any week, deduction may be made from the minimum wage, but the employer shall pay such employee an amount for such week bearing the same relation to the minimum wage as the actual number of hours of employment in the said week bears to the usual hours.

Where the usual hours of employment in any establishment in a week are less than forty, deductions may be made from the minimum wage but the employer shall pay to the employee for such week an amount which bears the same relation to the minimum wage as the number of hours of actual employment in such week bears to forty.

Order No. 2, governing female employees in laundries, dyeing and cleaning establishments

Minimum rate of wages for experienced female workers, \$12.50.

Rate of wages for apprentices.—\$9.50 per week for the 1st, 2nd, 3rd, and 4th months; \$10.50 per week for the 5th, 6th, 7th and 8th months; \$11.50 per week for the 9th, 10th, 11th and 12th months, after which she shall be paid not less than the minimum rate of \$12.50 per week.

Order No. 3, governing female employees in hotels, restaurants, boarding-houses, etc.

Minimum rate of wages for experienced female employees: \$14 per week of six days; \$16.50 per week of seven days.

Rate of Wages for Apprentices:

For week of six days,
\$10 per week for first month.
\$11 per week for 2nd month;
\$12 per week for 3rd month.

Usual hours as referred to in this order shall mean the usual, regular or customary number of hours worked in a week by the majority of the female employees in the class of employment concerned in the establishment.

Overtime.—Where overtime or time in excess of the maximum hours fixed by the Board is worked, the employer shall pay the employee for such overtime an amount (at a rate not less than the minimum wage) proportionate to the number of hours of overtime worked by the said employee.

Number of Apprentices.—No employer shall employ or permit to be employed as apprentices in any class of employment in any establishment more than twenty-five per cent (25%) of the total number of female employees in that class of employment in that establishment.

Reports to Board.—Every employer is required to forward to the Bureau of Labour, Legislative Buildings, Edmonton, not later than the tenth day of each month a statement showing all overtime worked in excess of the periods of employment or shifts fixed by the Board or customary in the class of employment concerned, for the preceding month, and all amounts paid for such overtime.

Posting of Orders.—Every employer is required to keep posted up a copy of every order of the Minimum Wage Board affecting employees in that class of employment and in the establishment concerned, and such order shall be posted as aforesaid in every room in which the employees concerned are or may be occupied or employed.

Hours.—9 in the day, or 48 in the week; provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

The rules as to deductions, overtime, number of apprentices, etc., are as in Order No. 1.

For week of seven days,
\$11.50 per week for 1st month;
\$12.75 per week for the 2nd month;
\$14 per week for the 3rd month.

After which period she shall be paid not less than the minimum rate of \$14 per week of six days and \$16.50 per week of seven days.

Hours.—Nine in the day or 48 in the week in establishments open only six days each week; and 56 in the week in establishments open seven days in the week, provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

Deductions.—Where meals are furnished by an employer as part payment of wages of an employee, not more than \$5 per week shall be deducted from her weekly wage for a full week's board of twenty-one meals. A fraction of a week's board shall be computed upon a proportional basis.

Where lodging is furnished by an employer as part payment of wages of an employee, not more than \$2 per week shall be deducted from her weekly wage for a full week's lodging of seven days.

Where the usual hours of employment in any establishment in a week are forty or more for a week of six days and forty-eight or more for a week of seven days, in the event of the employment of any employee for less than

the usual hours in any week, deduction may be made from the minimum wage, but the employer shall pay such employee an amount for such week bearing the same relation to the minimum wage as the actual number of hours of employment in the said week bears to the usual hours.

Where the usual hours of employment in any establishment in a week are less than forty for a week of six days and forty-eight for a week of seven days, deductions may be made from the minimum wage, but the employer shall pay to the employee for such week an amount which bears the same relation to the minimum wage as the number of hours of actual employment in such week bears to forty and forty-eight respectively.

Usual hours as referred to in this order shall mean the usual, regular or customary number of hours worked in a week by the majority of the female employees in the class of employment concerned in the establishment.

The rules as to overtime, the proportion of apprentices, etc., are as in Order No. 1.

Order No. 4, governing female employees in personal service occupation

The occupations covered by this order are those in a hairdressing or manicuring establishment, beauty parlor, barber shop, theatre, motion picture house, shooting gallery, joy parlour, dance hall, cabaret, garage, gasoline service station, or any establishment where business of a similar nature is carried on, or as elevator operator.

Minimum rate of wages for experienced female employees: \$14 per week. (This rate does not apply to ushers in theatres, motion picture houses, music halls, and cloak room attendants in cabarets and dance halls.)

Rate of wages for apprentices in hairdressing and manicuring establishments, beauty parlours, and barber shops.

One month probationary period is allowed for which no wage rate is stipulated.

\$6 per week for 2nd and 3rd months;

\$8 per week for 4th, 5th and 6th months;

\$10 per week for the 7th, 8th and 9th months.

\$12 per week for the 10th, 11th and 12th months;

after which period she shall be paid not less than the minimum rate of \$14 per week.

Order No. 5, governing female employees in offices

This order covers female workers employed as stenographers, bookkeepers, typists, billing clerks, filing clerks, invoicers, comptometer operators, auditors, attendants in physicians' and dentists' offices, clerical work of any

Rate of wages for ushers in theatres, motion picture houses, music halls and cloak room attendants in cabarets and dance halls.

Class A. Houses where performance is not continuous. The minimum rate of wages for ushers in theatres, motion picture houses, music halls and cloak room attendants in cabarets and dance halls shall be fifty cents per hour or any fraction thereof with a minimum payment of \$1 for periods between 9 a.m. and 6 p.m. or between 6 p.m. and 12 p.m.

Class B. For ushers or cloak room attendants working more than twenty-eight hours and not more than forty-eight hours per week, the minimum wage shall be \$14 per week.

Hours: Nine in the day or 48 in the week, provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

The rules as to deductions, overtime, number of apprentices, etc., are as in Order No. 1.

description, cash girls, telephone or telegraph operators.

Minimum rate of wages for experienced female employees: \$14 per week.

Rates of wages for apprentices.

A probationary period of one month is allowed for which no wage rate is stipulated.

\$7.50 per week for the 2nd and 3rd months;

\$10 per week for the 4th, 5th and 6th months.

\$11 per week for the 7th, 8th and 9th months;

\$12 per week for the 10th, 11th and 12th months.

Order No. 6, governing female employees in shops, stores and mail order houses

The occupations covered by this order are in shops, stores or mail order houses in the sales force; wrapping force; the auditing or check inspection force; the shoppers' force in the mail order department; the receiving, marking and stock room employees; sheet music saleswomen, and those otherwise engaged in the sale, purchase or distribution of any goods or merchandise.

Minimum rate of wages for experienced female employees: \$12.50 per week.

Rates of wages for apprentices.

\$7.50 per week for the 1st, 2nd and 3rd months.

after which period she shall be paid not less than the minimum rate of \$14 per week.

Hours.—Nine in the day or 48 in the week; provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

The rates as to deductions, overtime, number of apprentices, etc., are as in Order No. 1.

\$9 per week for the 4th, 5th and 6th months;

\$10 per week for the 7th, 8th and 9th months;

\$11 per week for the 10th, 11th and 12th months.

after which period she shall be paid not less than the minimum rate of \$12.50 per week.

Hours: 10½ hours on Saturday, and 9 on any other day, or 52 in the week; provided that where by reason of the season of the year or otherwise it seems advisable the Board may temporarily increase such hours.

The rules as to deductions, overtime, number of apprentices, etc., are as in Order No. 1.

British Unemployment Insurance Bill, 1925

The British Minister of Labour introduced in the House of Commons, on June 30, the Unemployment Insurance Bill, 1925.

The Bill provides that extended benefit, instead of depending solely upon the fulfilment of the conditions expressly laid down in the existing Acts, is to be allowed, subject to the conditions laid down in the Act of 1924, if the Minister of Labour "having regard to all the circumstances of the case, considers it expedient in the public interest" to authorize the grant of such benefit.

Clause 2 provides that the power of the Minister of Labour to waive compliance with the "first statutory condition," which at present expires on September 30, 1925, is extended to June 30, 1926. The "first statutory condition" requires payment of not less than 30 contributions since the beginning of the first of the two insurance years next before the beginning of the benefit year in which the application for benefit is made.

By Clause 3 it is proposed to increase the "waiting period" which must elapse before unemployment benefit is payable, from three days to a week.

Clause 4 lays down the rates of contribution, from employers, from employed persons, and from the Exchequer. As from the 4th Janu-

ary, 1926, until the end of the "extended period" (which covers the "deficiency period," as defined in the Act of 1921, and "a further period thereafter, ending on such date as the Minister may by order prescribe, not being a date later than the first day of the insurance year commencing next after the end of the deficiency period"), the proposed rates are 8d. from the employer and 7d. from the employee in the case of men (being 2d. less than at present from each), and 7d. and 6d., respectively, in the case of women (being 1d. less than at present from each). The proposed contributions payable in respect of boys and of girls are half those payable in the case of men and of women, respectively. On the other hand, the contributions of the Exchequer will be increased as from the 5th April, 1926. The contributions from the employers may be reduced to the rates payable by the employed persons, in certain circumstances which are fully set forth in the Bill. The Exchequer contributions will, in certain circumstances, be either increased or reduced.

After the end of the "extended period," the Exchequer contribution will be three-sevenths (instead of one-half) of the joint contribution of employer and employed person.

NEW MINE SAFETY REGULATIONS IN BRITISH COLUMBIA

RULES effective on September 1, 1925, have been issued under the Coal-Mines Regulation Act, Revised Statutes of British Columbia, 1924, chapter 171 as follows: (1) governing the use of electrical power in coal mines; and (2) for precautions against coal dust.

Electrical Power.—The rules as to electrical power prohibit the use of electricity in any part of a mine where there is danger of an explosion of gas or coal dust. If the percentage of inflammable gas in the general body of the air exceeds one and a quarter the electrical power must be cut off. (This provision does not include approved signaling wires or instruments or hand-lamps.) Full reports are to be furnished to the district inspector as to all existing or new apparatus, and annual reports will be required in future. Maps showing the location of fixed apparatus are to be maintained. Notices are to be posted containing prohibition of the use of apparatus by unauthorized persons, directions as to procedure in case of fire, and as to the restoration of persons suffering from electric shock, instructions as to the method of communicating by telephone with authorized operators, etc. Safety lamps are to be maintained in case of failure of electric light. Fire buckets filled with sand are to be kept near every place containing apparatus. Switch-gear must be placed in a separate room, compartment or box. (This rule to take effect on January 1, 1926). Full instructions are given as to the construction and installation of apparatus, its proper insulation, etc.

The following rules are laid down as to the qualifications and duties of employees:—

17. (1) Every person appointed to work, supervise, examine, or adjust any apparatus shall be competent for the work that he is set to do. No person, except an electrician, or a competent person acting under his supervision, shall undertake any work where technical knowledge or experience is required in order to adequately avoid danger.

(2) An electrician shall be appointed in writing by the manager of the mine to supervise the apparatus. If necessary for the proper fulfilment of the duties detailed in the succeeding sections of this rule, the manager shall also appoint in writing an assistant or assistants to the electrician.

(3) The electrician shall be in daily attendance at the mine. He shall be responsible for the fulfilment of the following duties, which shall be carried out by him or by an assistant or assistants duly appointed under subsection (2):—

(a) The thorough examination of all apparatus (including the testing of earth conductors and metallic covering for continuity) as often as may be necessary to prevent danger; and

(b) The examination and testing of all new apparatus and of all apparatus re-erected in a new

position in or about the mine before it is put into service in the new position; provided that in the absence of the electrician for more than twenty-four hours the manager shall appoint in writing an efficient substitute.

(4) The electrician shall keep at the mine a log-book made of daily log-sheets kept in the form prescribed by the Minister. The said log-book shall be produced at any time to an inspector on his request.

(5) The person authorized to work an electrically driven portable machine shall not leave the machine while it is working, and shall, before leaving the place, see that the pressure is cut off from the flexible trailing cable which supplies such portable machine. Trailing cables shall not be dragged along by the machine when working.

(6) Every flexible cable shall be examined at least once in every fourteen days by the electrician, and if used with a portable machine, at least once in each shaft by the person authorized to work the machine. A correct report of each of these inspections shall be made immediately in a book kept at the mine for that purpose. If a flexible cable is found damaged or defective it shall forthwith be replaced by a spare cable in good and substantial repair. Such damaged or defective cable shall not be further used underground until after it has been sent to the surface and there properly repaired.

Haulage by electric locomotives on the overhead trolley wire system is prohibited underground in any coal mine, but this regulation will not apply before April 1, 1930, to any such system which was in use prior to January 1, 1925.

Coal Dust.—The regulations for precautions against coal dust apply to all coal mines except those in which the floor, roof and sides of the roads are naturally wet throughout.

2. The floor, roof, and sides of every road or part of a road which is accessible shall be treated in one of the following ways, either:—

(a) They shall be treated with incombustible dust in such manner and at such intervals as will ensure that the dust on the floor, roof, and sides respectively shall always consist throughout of a mixture containing not more than 50 per cent combustible matter; or

(b) They shall be treated with water in such manner and at such intervals as will ensure that the dust on the floor, roof, and sides respectively is always combined throughout with 30 per cent by weight of water in the intimate mixture; or

(c) They shall be treated in such other manner as the Minister of Mines may approve;

Provided that the percentage of incombustible dust required under this regulation may be reduced by an amount equivalent to the percentage of water present in the mixture;

Provided also that the obligation imposed by this regulation shall not apply in respect of any road or part of a road if, and so long as, the natural conditions thereof as regards presence of incombustible dust and moisture are found by tests made in accordance with these regulations to be such as to comply with the foregoing requirements.

3. The incombustible dust used for the purpose of the preceding regulation shall contain not less than 50 per cent by weight of fine

material capable when dry of passing a sieve with 200 meshes to the lineal inch (40,000 to the square inch): Provided that if a larger proportion of incombustible dust is used than is required under the foregoing regulation, the percentage of fine material aforesaid contained in the incombustible dust may be reduced proportionately, but shall not fall below 25 per cent.

4. For the purpose of testing the composition of the dust mixture in any part of a road, the following procedure shall be adopted:—

(a) Representative samples of the dust shall be collected from the floor, roof, and sides respectively over an area of road not less than 50 yards in length;

(b) Each sample collected shall be well mixed and a portion of the mixture shall be sieved through a piece of metallic gauze having a mesh of 28 wires to the lineal inch;

(c) A weighed quantity of the dust which has passed through the sieve shall be dried at 212° Fahrenheit and the weight lost shall be reckoned as moisture. The sample shall then be brought to a red heat in an open vessel until it no longer loses weight. The weight so lost by incineration shall be reckoned as combustible matter for the purpose of the test.

Tests of samples of dust, so taken as to be representative of the normal composition of the dust throughout the roads of the mine on the floor, roof, and sides respectively, shall be made as often as may be necessary, but not less frequently than once a month.

The results of the test shall be posted at the entrance to the mine and recorded in a book to be kept at the mine for the purpose:

Provided that if the representative tests show in respect of any mine or any part of the mine that the natural conditions as regards presence of incombustible dust and moisture are such as to comply with the requirements of this regulation, it shall suffice thereafter to make representative tests in respect of that mine, or that part of a mine, at intervals not exceeding three months, or such longer intervals as may be approved in writing by the inspector of the district.

5. No dust shall be used for the purpose of complying with these regulations of a kind which may be prohibited by the Minister of Mines on the ground that it would be injurious to the health of persons working in the mine:

Provided that if any dispute arises as to whether the dust is injurious, it shall be determined in manner as provided by section 99 of the "Coal-Mines Regulation Act."

The above regulations to come into force on the 1st day of September, 1925: provided, however, that if it is shown to the satisfaction of the inspector of mines of the district,

in regard to any mine, that it has not been practicable by that date to obtain the necessary plant to carry out said regulations, the said district inspector may, subject to such conditions as he thinks fit, allow such extension of time as shall appear to him to be reasonably required.

British Views on Overseas Settlement

Lieutenant-Colonel L. C. Amery, Secretary of State for the Dominions, in introducing the colonial office estimates in the British House of Commons on July 27, referred to the problems of empire settlement. He said that part of the reason the Empire Settlement Act could not be worked to its full extent lay in the fact that public opinion overseas had not yet sufficiently grasped the effect of the settlement policy in building up national lives. Immigration, he continued, was too often regarded by one class overseas as a means of securing cheap labour—in this respect the immigrant from central and eastern Europe would more readily tolerate low wages—by another section as a potential source of labour competition. There was also an ever-increasing inducement to stay at home because of the British health, unemployment and now widowhood insurance. He suggested the consideration of a reciprocal Empire arrangement to prevent these measures from exercising a retarding influence on the free movement of the population within the Empire. It was only fair to state that those willing to go overseas if they are assisted, still greatly exceed those whom the dominions are prepared to assist. Immigration has fallen over 60 per cent from pre-war figures despite the Empire Settlement Act because the dominions like Great Britain itself have not recovered from the effects of the war.

Fatalities in British Mines in 1924

A preliminary statement issued by the mines department of the British Ministry of Labour shows that the number of miners killed by accidents in British coal mines in 1924 was 1,192, as against 1,087 in 1923. By causes these fatalities were as follows:

Fire-damp or coal-dust explosion..	35
Falls of ground..	598
Shaft accidents..	60
Haulage accidents..	259
Miscellaneous..	125
Surface accidents..	115
Total..	1,192

CANADIAN MANUFACTURERS ASSOCIATION

Fifty-fourth Annual General Meeting

THE Canadian Manufacturers' Association held their annual general meeting at Hamilton, Ontario, on June 1 to 4. Fifty-five places in Canada, from Sydney on the East to Vancouver on the West, figured in the registration list—an indication of the representative character of the gathering. The Association maintains a head office in Toronto, an office in Ottawa, divisional offices in Vancouver, Winnipeg, Toronto, Montreal and Amherst, and branch offices in Victoria, Edmonton, Hamilton and Quebec. The permanent staff now numbers 69, with 5 additional part-time employees. The treasurer's report showed that the total revenue of the Association for the year for membership fees was \$205,930, and that the cost of operation was \$203,888.15, leaving a surplus from fees of \$2,041.85. The total membership of the Association in 1924 was 4,125, distributed by provinces as follows: Ontario, 2,225; Quebec, 880; British Columbia, 326; Manitoba, 252; Alberta, 180; Saskatchewan, 51; Nova Scotia, 109; New Brunswick, 90, and Prince Edward Island, 12. The Association includes manufacturers who have a business sufficient to pay the wages and provide a living directly and indirectly for 2,500,000 of the population of the country. The members have invested in these industries over three billion dollars. The business of the convention followed the general lines of previous annual meetings, partaking largely of the nature of a stock-taking of the year's activities, approval of the work done and the laying-down of the policies to be followed during the coming year.

President's Address

The President, Colonel Arthur F. Hatch, presented in his opening address an outline of events and conditions during the past year. He said: "World trade conditions are improving. Old channels of commerce, dislocated and, in some cases almost destroyed, by the war, are resuming their natural courses, and new channels are forming. Reservoirs of wealth, nearly drained dry by war's demands, are refilling. The period of restoring physical damage is passing. Currencies are appreciating; buying power is reviving; the adoption of the Dawes plan has given a greater measure of confidence in Europe. Stable governments are gradually replacing those elected in the feverish atmosphere succeeding the war. The machinery of the world's trade has been repaired and is beginning to run again. Canada,

in common with other countries, is sharing in this general improvement throughout the world. In Canada there are also encouraging domestic factors. Owing to shortage in other countries, recovery of exchange and other causes, the prices of farm products have risen considerably, with the result that the purchasing power of the agricultural population has been greatly increased. It is reported from reliable sources that farmers, according to their ability, are paying off mortgages, liquidating bank loans, settling outstanding bills with merchants, making investments, and adding to bank accounts. This doubtless explains why the increased value of farm products has not been reflected in a greater demand for manufactured goods, but this may come later. The country's total external trade shows a substantial surplus of exports over imports; the exports for the year ending March, 1925, being \$1,081,361,643, and the imports being \$796,932,811. On the other hand, there are factors that are not encouraging. The total external trade of Canada for the year ending March, 1925, was \$1,878,294,454, as against \$1,952,130,164 for the year ending March, 1924, a decrease of \$73,835,710.

The president referred to the stream of Canadians still flowing south, and recommended the adoption of a new policy of national development in order to strengthen the position of Canada as an industrial state. Criticizing recent labour legislation, Colonel Hatch said: "It is encouraging to note that the demand for various measures of social legislation has been decreasing. After the war many thought that a new era had dawned—an era of little work and much aid from the state. Governments, sometimes leading and sometimes under pressure from the electorate, placed a great volume of social legislation on the statute books, and, at the same time, a great load on the backs of the taxpayers. Fortunately, grim reality has brought people back to their senses and has forced them to appreciate the fact that workmen's compensation, minimum wages, old age pensions, unemployment relief, and similar measures, are of little use if industry can scarcely pay operating expenses.

"Many of the principles underlying social legislation are sound and desirable. Constant efforts should be made to increase the comfort and well-being of all classes in the community, but what the state can do is strictly

limited by the ability of the taxpayers, who include everybody, to bear the burden entailed by the cost of such measures"

"Produced-in-Canada" Campaign

The "Produced-in-Canada" campaign, conducted by the Association for many years, has been so greatly extended in scope this year that it can be properly described as a national co-operative effort, in which Dominion, Provincial and Municipal governments are assisting.

During the year "Industrial Canada" was improved further editorially, and continued the policy of communicating the latest information regarding industrial subjects and news of the Association to the members.

Under the new arrangement approved by the annual general meeting last year, the "Canadian Trade Index" is now published annually, instead of once in three years. The 1925 edition appeared early in January and has been distributed. It was stated that reports received from Government officials, purchasing agents and members, indicate that the "Canadian Trade Index" is considered the best source for information regarding articles made in Canada and their manufacturers. The 1926 edition is being prepared. The advertising and business arrangements, as formerly, are in charge of the Publishing Department, and the editorial work is in charge of the Commercial Intelligence Department.

Industrial and Scientific Research

The Association, through its representatives, has been keeping in close touch with the Honorary Advisory Council for Scientific and Industrial Research. It is recalled that the Association organized a conference in Ottawa in February, 1923, for the purpose of correlating the activities of various organizations engaged in research. This conference was attended by representatives of the Dominion and Provincial Governments, the universities, and a number of business organizations. The report of the conference was printed and widely distributed by the Association. At the last session of Parliament an Act was passed to amend the Research Council Act. Under this legislation the Honorary Advisory Council for Scientific and Industrial Research was constituted a separate body with corporate powers. Members, including representatives of the Association, universities and other organizations, continue to serve without pay. The Council is empowered to make researches with the object of improving the technical processes used in the industries of

Canada, and to discover processes and methods which may promote the extension of existing industries and the development of new industries. Dr. H. N. Tory, President of the University of Alberta, was appointed President of the Council. As a result of this legislation and reorganization, it is hoped that the valuable work carried on by the Honorary Advisory Council for Scientific and Industrial Research will be continued and enlarged.

Combines Investigation Act

The report of the Legislation Committee, outlines the report of the Commission under the Combines Investigation Act on the alleged combine in among fruit dealers in British Columbia and proceeds as follows:—

"It will be recalled that the Privy Council in 1921 held that the Board of Commerce Act and the Combines and Fair Prices Act, 1919 (which took the place of the Combines Investigation Act of 1910) were unconstitutional inasmuch as they seriously interfered with 'property and civil rights in the Province,' a subject which is reserved, to the Provincial Legislatures, by the British North America Act.

It seems doubtful, therefore, if the adoption of further legislation, similar in principle, to the Anti-Trust legislation of the United States of America, would be constitutionally admissible.

In cases where illegal combinations, such as attempts to create monopolies, with a view to raising prices unduly, are shown to exist, the necessary machinery to deal with them is already provided by the Criminal Code of Canada, or by the present Combines Investigation Act, 1923, in its present or amended form, so long as it is applied with necessary discriminations."

The report of the same Committee outlined the measures affecting industry that have recently been enacted by the several Provincial Legislatures.

Eight-Hour Day

The report of the Industrial Relations Committee outlined the position of the employers in regard to some of the Draft Conventions of the Industrial Labour Conferences. In regard to the eight-hour day convention it was pointed out that when it was proposed at the Washington Conference of 1919, "the employers were unanimously opposed to the principle of a compulsory eight-hour day but considered it unnecessary to take part in the discussion. As regards the attitude of the employers of the various countries on this

question, it will be of interest to recall that the only employers' representatives who stood out at Washington in 1919 against the principle of making the Eight-Hour Day compulsory were Mr. S. R. Parsons of Canada (in accordance with the views of Canadian employers as expressed at the National Industrial Conference held earlier in the same year) and the employers' delegate from Norway. All the other employers' delegates acquiesced in the compulsory principle. Since 1919, the history of this convention, in brief, has been that it has been ratified by only a handful of small countries, unimportant industrially, while none of the great industrial nations has accepted it. It is true that Germany without ratifying the convention, three years ago, passed Eight-Hour Day legislation but as mentioned above, this has now been suspended. It is also true that both the French and British Governments announced at the last conference that they proposed to introduce ratifying legislation 'as soon as possible,' but no such legislation, so far, is forthcoming in France, while in England the new Government has definitely pronounced against it. It will be recalled that at Washington in 1919, Mr. Parsons, who incidentally was the only employer to represent the point of view of North America as a whole, took the ground that while eight-hour day conditions were no doubt unobjectionable and even desirable in certain industries (and in such industries would come about,—and were coming about,—gradually, in the natural course of things), it was unwise to introduce the principle of a compulsory Eight-Hour Day. This view, incidentally, has just been confirmed by the British Minister of Labour, in the House of Commons, in these words: 'The variety of British industry is very great and by voluntary agreement the arrangement of hours that best suits the various particular needs has been reached by different trades.' The Eight-Hour Day by legislative enactment would not only mean the employment of an army of inspectors to secure enforcement, but would throw the whole question into politics,—obviously most undesirable in the interests of good relations between employers and employees. Further, as regards Canada in particular, Mr. Parsons maintained that so long as the United States refused to adopt the Eight-Hour Day,—it was economically impossible for Canada to do so. The position taken by Mr. Parsons and the Norwegian delegate was much criticised at the time, particularly by labour. Subsequent events, however, have, it is submitted, completely vindicated it,—witness the changed attitude not

merely of the employers of the various countries but of the Governments, not to speak of the recently-reported opposition to the compulsory principle of even a section of British labour."

Workmen's Compensation

The same Committee, after a review of recent legislation in regard to Workmen's Compensation, proceeds as follows:—

"The compulsory state insurance system of workmen's compensation administered by a Commission, has now been in operation in Canada for ten years, and, while probably the majority of employers consider it, in principle, a good system, your Committee is convinced that experience has proved the soundness of the position always taken by the Association, namely: that such legislation should include the principle of contribution by the workmen. It is interesting to note that this principle is an integral part of the new insurance scheme recently announced by the British Government. Incidentally, even the small contribution made by the workmen in British Columbia and Alberta toward the cost of medical aid has been found to have decidedly beneficial effects; and your Committee believes that every effort should be made to have this principle recognized in the other provinces."

Election of Officers

President, J. H. Fortier, Quebec; 1st Vice-president, John M. Taylor, Guelph, Ontario; 2nd Vice-president, W. S. Falles, Montreal; Honorary Treasurer, Thomas Roden, Toronto.

Child Welfare Conference at Ottawa

The Fifth Canadian Conference on Child Welfare will be held at Ottawa on September 28 to October 1. Workers of national prominence will give special papers on progress in specialized fields, and all phases of social work in Canada will be discussed.

The whole first day of the meeting will be devoted to a study of the legislation and activities that have developed throughout Canada in the past five years. The other subjects of discussion will be as follows:—Social Hygiene and Child Welfare; The Mother and Child in the Outposts. The Central Placement Bureau; The Child and Tuberculosis; Child Placing in Rural Areas; Ethical and Spiritual Development of the Child; Mental Hygiene; The Normal Child; Family Desertion. The report of the council itself will be largely a summary of the legislation enacted since 1920.

The Canadian Council on Child Welfare was founded in Ottawa in 1920.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

THE notes in this section of the **LABOUR GAZETTE** relate to the work carried on by secondary vocational schools which receive federal grants under the provisions of the Dominion Technical Education Act. Other activities are also noted which have a direct bearing on the training of apprentices and industrial workers. The Dominion Government, through annual grants administered by the Technical Education Branch of the Department of Labour, assists the provinces in developing all forms of vocational education and industrial training which are of benefit to workers in various branches of industrial commercial and home-making activities.

British Columbia.—Mr. R. B. Vaughan, Director of Technical Education for the Province of Manitoba, has been appointed principal of the Technical High School at New Westminster, and will take up his new duties on September 1.

Ford, Ontario.—The Ford Motor Company of Canada, Limited, announce that they have formulated a plan to give employment to the graduates of the Windsor-Walkerville Technical School, train them along Canadian lines with Canadian ideals and fit them for Canadian business. The young men will be given an intensive course of training in the various departments of the Ford Motor Company's plant, covering a period of three years. This policy has been decided upon as a result of complaints in the press that Canadian youths go to the United States as soon as they leave high school, there to be trained in American business methods and take their places in American businesses.

Montreal.—Over 2,000 boys registered and attended the night schools of the Catholic School Commission, held in Montreal from October to March. For the most part they ranged in age from 14 to 16. Many boys of these ages attending the schools have been granted permits to go to work by the Provincial Government Employment Bureau, but as they have not fully satisfied the inspectors as to their scholastic attainments, they receive their permits conditionally upon attending night school, such attendance being compulsory. No night school for girls are operated. Boys working on conditional permits appear before the inspectors at the Provincial Government Employment offices and are examined as to progress made at the end of each session.

Civilian Rehabilitation in the United States

Rehabilitation of cripples, including vocational retraining, is now an accepted American principle. Since the enactment by Congress in 1920 of the Fess-Kenyon law, thirty-eight states have accepted the terms of this act providing for federal-state co-operation in reclaiming the maimed victims of industry. New York, Minnesota, and Wisconsin provide under the accident compensation law for the payment of maintenance during rehabilitation. For this purpose the New York compensation law provides that in a death case where there are no dependents the insurance carrier shall pay \$500 to the state treasurer to create a fund to be used for such maintenance under the direction of the industrial commissioner. The constitutionality of this provision in the New York law has recently been upheld by the Supreme Court of the United States.

The problem of rehabilitation was first tackled in a constructive way by Massachusetts in 1918. In 1919, in harmony with the efforts of the American Association for Labour Legislation, nine states—and in 1920 two additional states—took steps to make rehabilitation a function of their compensation commissions. Since then educational and legislative campaigns have been carried on, first to bring about the passage of the Fess-Kenyon bill; more recently to secure from Congress the extension for another three-year period of the necessary appropriations to continue federal co-operation with the states, and, continuously, to stimulate acceptance of the plan by the states. Acceptance carries with it the duty on the part of the states to place the boon of retraining within reach of all cripples.*

School for Retarded Boys at New York

The Hudson Guild is planning to make a vocational survey of the City of New York for the purpose of finding work for maladjusted boys attending the Hudson Guild School, according to an announcement by Headworker Dr. John Lovejoy Elliott. The Board of Education is co-operating in the work. According to Dr. Elliott, there are many children in the public schools who are such misfits that it is hopeless to try to adjust them to the standardized system of education. It was to keep such boys from a life of crime that the Hudson Guild Industrial School was started

*An account of the work that is being carried on in Canada and the United States in connection with the retraining of disabled workmen was given in the issue of the **LABOUR GAZETTE** for October, 1924.

last year. The curriculum and the methods of instruction used in the Industrial School are as different from those of the public school system as it has been possible to make them. The main studies are carpentering, toy-making and practical science, and the required amount of English, writing and arithmetic, the last four courses being however camouflaged as much as possible.

"The Hudson Guild School for misfits is still merely an experiment, but the theories back of it are sound. If it is a success, and we have every reason to believe that it will be, it may have a far-reaching effect upon our school system. Already the Board of Education has shown its interest and its desire to co-operate by donating much of the equipment for the school rooms. Just what will be the outcome of our experiment only the future can tell, but of one thing I am reasonably sure—if there were more schools like the one at Hudson Guild in the city, there would be fewer candidates for our State prisons."

Apprentice Training in South Australia

The following are extracts from a paper on the subject of "Apprentice Training" prepared by C. Fenner, D.Sc., Superintendent of Technical Education for South Australia, and appearing in Bulletin No. 1, 1924, of the Department of Education of South Australia.

The question of the organization of apprentice training is one that is receiving considerable attention in the various Australian States at the present time. It is of much interest to note that in this matter educationists have taken an important part. It is urged that the all-round education, in both workshop and school, of the youth who aspires to be a skilled tradesman, is a problem comparable in interest and importance to the training of the professional man or woman, and one which can be properly solved only by the co-operation of the industrialist and the educationist. The present unsatisfactory position regarding the number and efficiency of skilled tradesmen is, to some extent, a reflection of the lack of popular and educational interest in these matters.

The Technical Education of Apprentices Act of South Australia was passed in 1917. The necessary proclamations under the Act were made in 1918, and the first classes were opened in June, 1919. The Act has now been in continuous operation for over five years. The results achieved are of interest from several points of view, namely,

- (a) The application of compulsory part-time education of adolescents.
- (b) The character of the education given—including consideration of teachers, syllabus, classrooms and workshops.
- (c) The close correlation of educational and industrial conditions.
- (d) The relation of this work to the general problem of apprenticeship.

In July, 1917, two years prior to the commencement of these special apprentice classes, the then Chief Inspector of Factories in South Australia, included in his annual report the following statement: "As a general rule little or no provision is made by em-

ployers for teaching apprentices their trades. The apprentices for the most part pick up what knowledge they can in the course of their work, and those who are keen and observant turn out good tradesmen, while the careless lad after finishing his term often becomes a disturbing element and a nuisance in the trade owing to incompetence." The position to-day is that every intending apprentice must first serve for a probationary period, that every probationer and apprentice is required to regularly attend an approved technical course in a trade school, that every employer reports once each term regarding the workshop training and progress of each apprentice, and that a careful record of the school and work-shop reports of each such apprentice is filed for reference. A report on the school and the workshop record of each lad is forwarded to his parents once every term, and a certificate is issued on the completion of his course. While satisfactory results have been achieved, many acknowledged defects exist in the scheme from both the educational and the industrial points of view. Still other matters are open to discussion.

The chief object of the Act is to place the system of apprenticeship in the skilled trades on a sound foundation, combining with the general workshop training a part-time three-year course of school training for each apprentice. With this object in view provision is made for the compulsory attendance of apprentices at technical classes, during the first three years of their apprenticeship.

It is considered that the benefits to be derived from this system are three-fold:—

- (a) The apprentice should benefit by receiving from selected skilled men of his trade a complete and graded course of instruction, that should make him not only a better craftsman but a citizen with a broader knowledge and wider interest than would otherwise be the case.
- (b) The employer should benefit in having the abilities of his apprentices developed in all directions, so that they acquire a broader conception of their craft than may be gained in any single shop under ordinary conditions.
- (c) The benefit to the State, as a whole, should be the production of an efficient body of craftsmen throughout the skilled trades, proud of their craft and up-to-date in their methods.

With this three-fold benefit there is a three-fold obligation. The apprentice is required to give to his class punctuality and interest, and to attend at school for one evening per week of his leisure time. The employer is required to allow his apprentice one half-day per week, with pay, during working hours for school purposes. The State is to provide the best available teachers, schools, and equipment, and bear the full costs of all schooling. Employers are required to furnish from time to time such information regarding the workshop training of their apprentices as may be asked for in writing. In order to properly correlate the school with the workshop, provision is made for an Apprentice Advisory Board, and for certain subsidiary boards, called Trade Committees, comprising representatives of both employers and employees skilled in the trades concerned.

Further, the Act prohibits any employer from entering into indentures of apprenticeship with a boy until the latter has served three months on probation. Before commencing such probationary period the intending apprentice must obtain a Probationer's License from the Chief Inspector of Factories, and this is not issued until the Chief Inspector of Factories is satisfied that the parties concerned are willing to abide by the terms of this Act. Apprentices who are twice convicted of an offence against the Act regarding attendance may have their indentures cancelled by the Industrial Court. Where the year's school work of

any apprentice is not considered satisfactory, he may be required to attend classes for an additional year.

The Act applies to the whole of the indentured apprentices or probationers in the proclaimed trades within the proclaimed districts. Practically all the skilled trades carried on in this State have now been proclaimed.

The correlation of the school work of the apprentices with that of their factory or workshop is accomplished in several ways:—

(a) The Apprentices Advisory Board.

(b) Trade Committees.

(c) The Reports sent by and to employers, etc.

(d) The visiting of workshops by a special officer.

The question of the proper syllabus of study for these apprentices is one that has involved serious consideration. Each boy, during his part-time three-year course, attends at the school for a total of 756 hours

of instruction. Guided to some extent by the opinions of the various Advisory Committees associated with this work, the courses have come to take the so-called utilitarian aspect, but as far as possible effort is made to include in the courses judicious accounts of the history of the various crafts, to encourage the feeling of pride in good work, and, in such other ways as are found possible to make all these studies "humanistic." There is much to be said in favour of the opinion that a "trade" subject thoroughly taught, has as high a cultural value as a "classic" subject equally well taught. It is believed, however, that it would be greatly to the advantage of these classes, and would add much to the success, if a well-graded general course of one-hour per week embodying selected principles of civics and hygiene, with a proportion of history and economics, could be included in the curriculum of each trade concerned.

Sickness Allowance for Employees in New York

The Merchants' Association of New York City recently inquired into business practices in that city in the treatment of office employees absent because of illness. Replies were received from seventy-two representative concerns including large insurance offices, banks, wholesale, manufacturing, engineering, advertising and publishing offices. These replies showed that reductions are seldom made for temporary absence due to illness. Only fourteen firms reported having any fixed rules. Only one had a rule of non-payment of salary during absence due to illness, a high percentage of the employees in this firm working on a piece-work basis, and exceptions to the rule being frequently made in case of protracted illness of employees who had been with the company for a long time, in some cases not only was the full salary allowed but the doctor's bill was paid. The practice of the other thirteen firms varied all the way from no payment at all during the first year of employment to payment for any length of time an employee may be ill after one year of service. One insurance company makes no salary allowance for absence during the first year of employment, except in special cases, and then never for more than two weeks; after one year's service, full payment is allowed for one month's illness and the time is then gradually increased until after fifteen years of service, a maximum of six months on full pay and six months on half pay is allowed.

Another insurance company has a "service disability" plan, which is applicable only to employees who have been with the company one year or more. After one year's service regular compensation is allowed for two weeks "disability" absence and a service disability allowance which amounts to 35 per cent of the regular compensation is allowed for an additional two months. The schedule is then gradually increased until after thirty-four years

of continuous service an employee is allowed regular compensation for twenty-six weeks and "service disability" allowance for an additional five years provided he has never before been absent on account of illness for more than twelve days in any one year which each employee is allowed before the plan becomes operative. The minimum "service disability" allowance is \$20 per month and the maximum \$125.

A third insurance company pays during the first year of service for absence due to serious illness, but after that period full salary is allowed, with additional compensation, known as a sickness allowance, not to exceed fifty per cent of the salary or a maximum of \$25 a week for sickness lasting longer than two weeks. This company also has a schedule of payment for surgical operations.

A fourth insurance company has a cumulative plan under which provision is made for two weeks sick leave with full salary during the first six months of employment, one month after the first six months of employment and one additional month for every six months of employment thereafter up to a maximum of ten months at the end of five years of completed service. Only employees who have never drawn on the amount of sick time credited to them are entitled to the maximum benefits provided by the plan. If absence exceeds the full salary benefits, further payments are made at a "pension rate" provided the employee has been with the company five years or more. The pension rate begins at 20 per cent of the salary rate and increases at the rate of one per cent yearly up to fifteen years and thereafter two per cent yearly until after completion of twenty-five years of service the maximum pension of 50 per cent of the salary rate is allowed.

Two other firms a silk manufacturer and a wholesale druggist, have organized mutual

benefit associations to take care of employees absent because of illness. The benefit fund of the latter concern is kept up by weekly contributions taken from the pay of members of the benefit association. A large office furniture concern has a welfare plan, which is put into effect after a maximum of two weeks' absence on full pay has been allowed. Under this plan an employee after six months' service, would be carried for four additional weeks at 50 per cent of his regular salary, and

for every additional month of service up to one year, two additional weeks are allowed at the same rate. After two year's service he is carried twenty weeks at the rate of 55 per cent of his regular salary, and for every additional year of service four additional weeks are allowed at a rate which is increased 5 per cent each year. Under this schedule, after ten year's service, a sick employee would be carried on the payroll for one full year at his regular salary rate.

NOTES ON LABOUR UNION ACTIVITIES

Dates of Coming Conventions

Trades and Labour Congress of Canada, at Ottawa, Ontario, commencing August 31.

Canadian Federation of Labour at Quebec, Quebec, on September 14 to 16.

American Federation of Labour at Atlantic City, New Jersey, commencing October 5.

International Association of Siderographers, at New York, N.Y., on September 5 to 9.

Brotherhood of Painters, Decorators and Paperhangers of America, at Montreal, Quebec, in September.

Metal Polishers International Union, at Cincinnati, Ohio, on September 12.

International Brotherhood of Teamsters, Chauffeurs, Stablemen and Helpers, at Seattle, Washington, in September.

Amalgamated Association of Street and Electric Railway Employees of America, at Montreal, Quebec, on September 14.

United Brotherhood of Maintenance-of-Way Employees and Railway Shop Labourers, at Detroit, Michigan, on September 14.

Brotherhood of Boilermakers, Iron Shipbuilders and Helpers, at Kansas City, Missouri, on September 14.

Coopers' International Union of America, at Chicago, Illinois, on September 14.

Brotherhood of Railway Carmen, at Kansas City, Missouri, in September.

Amalgamated Lithographers of America, at New York, N.Y., on September 21.

International Brotherhood of Electrical Workers, at Seattle, Washington, on September 21.

Industrial Workers of the World, at Chicago, Illinois, on November 9.

Federation of the Building Trades, at Three Rivers, Quebec, in September.

Federation of Pulp and Paper Workers, at Three Rivers, Quebec, in September.

Canadian Brotherhood of Railroad Employees at Toronto, Ontario, on September 21.

Order of Railway Conductors of America

The thirty-eighth session of the Grand Division of the Order of Railway Conductors of America was held at Minneapolis, Minnesota, from May 4 to 22, President L. E. Sheppard in the chair. The vice-president, Mr. W. M. Clark, as national legislative representative, presented a report covering the three-year period since the last session. This report showed that the major legislative efforts of the joint committee of the railway brotherhoods during the sessions of the Sixty-eighth Congress of the United States were exerted in behalf of the Howell-Barkley railroad labour bill to abolish the United States Railroad Labour Board and establish other machinery for the adjustment of disputes. He said that the bill would be reintroduced in the Sixty-ninth Congress. An amendment had been secured to the locomotive inspection law, approved June 7, 1924, authorizing the appointment of fifteen additional inspectors and increasing the salary of inspectors from \$3,000 to \$3,600 a year, together with the necessary additional appropriations to insure the carrying out of these provisions. Similar increases in salaries were secured for the inspectors in the Bureau of Safety. Their efforts had been mainly responsible for an additional \$150,000, appropriated by Congress for the Bureau of Safety. This sum is intended to be used for additional inspectors for the safety appliance and hours of service activities of the Bureau, but not for the investigation of automatic train devices. Approval was expressed of the immigration restriction law of 1924, and of the law providing for income tax reciprocity with Canada, which was approved on March 3, 1923.

Some important changes were made in the laws of the Order, among which was an amendment to provide that Canadian provincial legislative committees shall convene and organize between January 1 and January 15,

1926, and biennially at the same time thereafter. The laws of both the Accident Department and the Pension Department (formerly known as the Indemnity Association) were re-written, and it was arranged that information relative to the Pension Department should be mailed to members of that Department. The Grand Division ordered a suspension of the payment of further pensions for a period of three years, or less if the fund should reach \$1,000,000 before three years in which event the payment of pensions would be automatically resumed.

A recommendation was adopted relative to securing a home for aged members of the Order, their wives and widows, and the Board of Directors was authorized to canvass the various localities in the United States and Canada for the purpose of obtaining the most suitable location with not less than 100 acres of land. It was also decided that a standard subscription blank should be prepared for the use of Divisions or members in making donations.

Trade Union and University

The Central Labour Council of the American Federation of Labour, in co-ordination with the University of Cincinnati, has lately organized extension courses for the working men and women of the city. This work is under the direction of a joint committee, half of whose members are appointed by the Labour Council and half by the university. The nature of this co-ordinated authority makes this an undertaking of peculiar interest. In a number of places in the United States there are college professors serving in an individual capacity as instructors in labour classes under outside auspices; but here they serve under a standing committee of the university itself, officially representing the institution as a part of its extension faculty.

In the course of an article on "Trade Union and University", the *Survey* (New York) says: "The University of Cincinnati is the largest of the American municipal universities. Partly because it is a municipal university, but primarily because its faculty and its constituency believe in the policy, it is interwoven into the life of its city to a greater extent than is true of perhaps any other similar institution. The co-operative plan of its college of engineering and commerce is widely known. Here a total of over one thousand students from specialized divisions are divided into two equal groups. Group A is distributed by the college among two hundred factories, shops, banks, offices and commercial establishments to work at the actual tasks of their vocation under the joint supervision of college and plant, while Group

B attends university classes. At the end of a month, Group A enters laboratory and class room, Group B going out into the field to take A's place at bench and counter. In this way they alternate throughout the entire professional course, education being carried on under the joint auspices of the university and places of business. The students of the college of education during a considerable part of their course serve as teachers half of each day in the city public schools, and attend university classes the other half day. The board of education serves as an advisory board to the college, and shares responsibility for the finance and direction."

Pension Laws of Brotherhood of Railroad Trainmen

The Brotherhood of Railroad Trainmen at their fourth triennial convention held at Cleveland, Ohio, in May last, recommended to the members a change in the pension laws of the Brotherhood, whereby the age limit will be fixed at 65 until July 1, 1926. The age limit since January 1, 1924, has been 40 years but it was claimed that older members of the organization had not understood the principle of age limits, which had been placed too low. The committee on pensions recommended that "No application will be accepted from any member who has on July 1, 1926, reached the age of 65 years. No application will be accepted from a member who has after July 1, 1926, reached the age of 45 years. Any person joining the Brotherhood of Railroad Trainmen after July 1, 1926, and who has reached the age of 45 years will not be eligible for admission to this department." The adoption of this recommendation depends upon the result of a referendum vote of the lodges.

A referendum vote of the lodges will be taken also in a proposal "that the Pension Department be made a part of our constitution and general rules and that it be amended in the future by the convention as now prevails in the amending of our regular constitution, and that the funds of the Pension Department be handled in the same manner as all other funds of the Brotherhood."

The Railroad Trainman, the official publication of the Brotherhood, gives the following information regarding the assessments and benefits of the pension department:—

Monthly assessments for ages at entry are as follows:—	
18 to 30, inclusive.....	\$0.50 monthly
31 to 35, inclusive.....	1.00 monthly
36 to 40, inclusive.....	1.50 monthly
41 to 45, inclusive.....	2.00 monthly
46 to 50, inclusive.....	2.50 monthly
51 to 55, inclusive.....	3.00 monthly
56 to 60, inclusive.....	3.50 monthly
61 to 65, inclusive.....	4.50 monthly

Should the monthly assessment not be sufficient to meet the demands upon the department, the president and general secretary and treasurer will have authority to levy additional assessments to meet such demands. A notice of such additional assessments shall be published in *The Railroad Trainmen*.

The benefits are as follows:—

Members paying assessment for	Receive as pension
61 to 120 months.....	\$35 per month
121 to 180 months.....	40 per month
181 to 240 months.....	45 per month
241 to 300 months.....	50 per month
301 to 360 months.....	55 per month
361 to 420 months.....	60 per month
421 to 480 months.....	65 per month
480 months and over.....	70 per month

The report of the work of the convention will be given to the lodges before September 1, at which time the changes in the constitution laws and rules will become effective.

Dominion Railway Mail Clerks' Federation

The Dominion Railway Mail Clerks' Federation held its biennial convention in Ottawa from May 26 to 29 under the presidency of Mr. G. R. Jackson. Many subjects were discussed including annual railway passes for railway mail clerks, seniority rights, the Dominion Government Superannuation Act, and sanitary equipment and safety appliances in postal cars. The convention expressed itself in favour of the Federation withdrawing wholly and permanently from affiliation with postal employees. It was opposed to the attitude of the president in the recent strike (*LABOUR GAZETTE*, July, 1924, p. 546) as not in accordance with the vote taken by the Federation, and a resolution was adopted that

No strike of the members of this Federation shall be called unless 80 per cent of the total membership have by ballot approved thereof, and unless said vote is sustained by an 80 per cent vote of the Federation executive. All strike ballots shall be sent out by and returnable directly to the Federation executive. No strike order shall be valid unless signed by at least four members of the Federation executive.

All railway mail clerks were advised to accept the Government Superannuation Act, but the following amendments to the Act were proposed—that optional superannuation for railway mail clerks should be provided at the age of 60, or after 35 years of service; that full 35 years superannuation should be provided for railway mail clerks suffering total disability as a result of being injured while on duty; that a stated amount should be provided for the civil servant resigning after less than 10 years of service as it was claimed that the lack of such a provision kept out a large number of junior men.

The convention suggested that some remuneration should be provided for men acting as head clerks at points away from head-

quarters, and that the position of head railway mail clerk away from headquarters should be given to the senior railway mail clerk in the district, if he will accept it, provided that his qualifications are sufficient. Another resolution proposed that the district in which a man resides should be held to be his residence in so far as district promotions are concerned, and that district promotions should be held for and allotted to men in their own respective district.

With regard to the subject of sanitary equipment and safety appliances it was decided that when locals have a particular grievance with regard to postal cars they should take the matter up with the executive of the Federation. The following report was received from the committee in charge of this matter:—

That all sanitary equipment and safety appliances in postal cars be properly looked after by the railway companies, it being recommended that the Department be asked to impress on the railway companies the use of more thorough inspection of postal cars with a view to improving the sanitary equipment and hygienic arrangements; that the railway companies supply safety doors in mail cars; that they install emergency signal systems for use in case of hold-ups or accident; that the letter case in new steel cars be remodelled; that car doors be supplied with safety chains, storm windows, to be removed in summer and screens supplied; that storm protection be supplied for doors; that cases be remodelled and pigeon-holes be of uniform size cases, be securely fastened to the wall of car and all surplus equipment to be removed. In combination cars that steam valves be installed in the mail car and also gas connections.

Several amendments were made to the constitution, among which was one which provides that the Dominion Federation should meet regularly in the city of Ottawa once during the recess of the Dominion Federation, on the anniversary of the date of the last session. The Federation may also meet in such special sessions as may be called by the president and at such time and place as he may determine, or upon the request of three members of the executive.

Mr. Jackson having withdrawn from nomination Mr. I. V. Dexter was elected as president for the year 1926-27. Mr. W. S. Osborne was elected first vice-president; Mr. G. Paradis, second vice-president, Mr. H. E. Downe as third vice-president, and Mr. J. P. Allen as secretary-treasurer.

Federation of Ontario Fire Fighters

The Federation of Ontario Fire Fighters at its sixth annual convention held at Kitchener in June, approved the draft of a firemen's pension bill, which it is proposed to bring before the provincial legislature at its next session. The bill would require all towns and

cities to provide a superannuation and pension fund for their firemen, to be maintained by equal contributions from the firemen and the municipalities.

The convention also approved of a group insurance plan, which will go into effect if approved by a referendum vote of all members of the Federation. The scheme is optional on the part of the firemen. It was submitted by an insurance company and provides that each fireman will be eligible to receive an indemnity at the rate of \$50 a month in case of sickness for a maximum period of fifteen weeks, or for thirty days in the case of certain specified diseases. The annual premium payable by the association will be \$10.80 per member. All *bona fide* members of the Federation between the ages of eighteen and sixty years, who have been in the employ of fire departments connected with the association for a period of three months will be eligible for this insurance.

The secretary was instructed to prepare cards to send to the branch locals to ascertain how many members would be willing to give a dollar on the death of a member in order to create a voluntary benevolent fund, and the executive was instructed to see if this scheme would come within the law of the province of Ontario.

The convention favoured standardized hose couplings, the opinion being that a standard of five threads to the inch is the most suitable to all pressures. It was recommended that an educational campaign should be conducted to impress the proper bodies with the need of standard couplings. The Federation will suggest to the Hydro-Electric, Bell Telephone and Telegraph companies that wires should not be strung less than eighteen feet above pavements, claiming that men on aerial trucks have been injured by wires strung too low. It was also decided that the name of any member who is retired or discharged from a fire department should be immediately sent to the General Secretary-Treasurer so that he may report the same to all branches.

Fort William was chosen as the place for next year's convention.

Mr. James J. O'Kelley of Ottawa was re-elected president and Mr. D. H. Lamb, of Toronto, as secretary-treasurer.

American Federation of Musicians

The thirtieth annual convention of the American Federation of Musicians was held at Niagara Falls, New York, from May 11 to 15, with 342 delegates in attendance, representing 771 local unions and a membership of over 100,000 in the United States and Canada. President Joseph N. Weber spoke of the im-

proved conditions for musicians that had developed since the organization of the Federation. He interpreted some of the complex rules of the organization, and explained that it was impossible to conceive or enforce a set of rules which would govern all exigencies developing in the conditions under which members of the Federation earn their living.

Some changes in the rules were made at the convention to become effective on August 1, 1925. The convention reaffirmed the principle that all members rendering essentially musical services with or as vaudeville acts are under the jurisdiction of the Federation at all times. The payment of strike benefits was extended from ten to fifteen weeks. It was also arranged that in addition to the price of an engagement the contracting members must charge the cost of transportation for such engagement by railroad or otherwise.

The following construction was placed on some of the existing rules of the organization:

1. Engagements are considered competitive if musicians receive pay for their services or if the employer, in the absence of free service of musicians, would be obliged to pay for such.

2. A member of the American Federation of Musicians cannot play with suspended or expelled members or with non-members in or outside of the jurisdiction of a local or of the American Federation of Musicians on competitive engagements or engagements for pay unless it be with the consent of the American Federation of Musicians, or in cases wherein the laws of the Federation provide otherwise. However, union musicians residing in a town which is not in the jurisdiction of any local of the Federation if the engagement is not taken in competition with members of the Federation and such non-union musicians do not include suspended or expelled members of the Federation.

But nothing in the above two sections shall be so construed as to permit any local entering into agreements with bands or orchestras of non-members in or near its jurisdiction—and permitting its members to play with such bands or orchestras, provided that such bands or orchestras contain no suspended or expelled members.

Members of travelling bands or orchestras filling engagements in theatres as added attractions or vaudeville act must identify themselves with the local house leader or a representative of the local during the first day of their engagement as members in good standing, as provided by Article XII, Section 17, Paragraph A, of the National By-laws.

The method of identification in the instances of playing engagements of one week or less in another jurisdiction shall be by presentation of membership card.

The thirty per cent additional charge heretofore pertaining to travelling dance orchestras only is hereafter to apply to hotel, restaurant and cafe engagements as well.

A travelling orchestra playing an engagement of not less than two weeks in a jurisdiction must not, during the continuance of such engagement, accept or play miscellaneous engagements outside the jurisdiction of any other local, when in competition with members of the jurisdiction where said first-named

engagement is being played, unless the local in said latter jurisdiction consents; but nothing herein contained shall be construed to deny the members of said travelling orchestra their respective rights as members of their home locals.

Locals were urged to secure the passage in their respective legislatures of legislation similar to that in force in the State of Massachusetts, known as the Casual Payment Law. This law requires the prompt payment of wages of musicians and of certain casual employees. It reads as follows:—

Every person engaged in carrying on in a city a hotel or club, and every person engaged in carrying on within the commonwealth a theatre, moving picture house, dance hall, factory, workshop, manufacturing, mechanical or mercantile establishment, mine, quarry, railroad or street railway, or telephone, telegraph, express, transportation or water company, or in the erection, alteration, repair or removal of any building or structure, or the construction or repair of any railroad, street railway, road, bridge, sewer, gas, water, or electric light works, pipes or lines, shall pay weekly each employee engaged in his business, and every person employing musicians, janitors, porters or watchmen shall pay weekly each such employee the wages earned by him to within six days of the date of said payment if employed for six days in a week or to within seven days of the date of said payment if employed seven days a week, or, in the case of an employee who has worked for a period of less than six days hereinafter called, a casual employee, shall, within seven days after the termination of such period, pay the wages earned by such casual employee during such period; but any employee leaving his employment shall be paid in full on the following regular pay day; and any employee discharged from such employment shall be paid in full on the day of his discharge, or in Boston as soon as the laws requiring pay rolls, bills and accounts to be certified shall have been complied with; and the commonwealth, its departments, officers, boards and commissions shall so pay every mechanic, workman and labourer employed by it or them, and every person employed by it or them in any penal or charitable institution, and every county and city shall so pay every employee engaged in its business the wages or salary earned by him, unless such mechanic, workman, labourer or employee requests in writing to be paid in a different manner; and every town shall so pay each employee in its business if so required by him; but an employee absent from his regular place of labour at a time fixed for payment shall be paid thereafter on demand. This section shall not apply to an employee of a co-operative corporation or association if he is a stockholder therein unless he requests such corporation to pay him weekly, nor to casual employees as hereinbefore defined employed by the commonwealth or by a county, city or town. The department of public utilities, after hearing, may exempt any railroad corporation from paying weekly any of its employees if it appears that such employees prefer less frequent payments, and that their interests and the interests of the public will not suffer thereby. No person shall by a special contract with an employer or by any other means exempt himself from this section or Section 150. Whoever violates this section shall be punished by a fine of not less than ten or more than fifty dollars.

The following officers were elected: president, Mr. Joseph N. Weber; vice-president, William L. Mayer; secretary, Mr. William J. Kerngood; treasurer, Mr. Harry E. Brenton.

Change in Prices for Travelling Members and Leaders.—Members travelling with musical comedies, etc., are permitted to render services at only eight performances and one rehearsal, instead of nine performances, when called upon, for the weekly price of \$80 for week stands.

Eight performances weekly instead of nine are permitted in broken weeks.

The number of performances permitted under the weekly salary for travelling leaders with such attractions was reduced from nine to eight.

The scale for travelling leaders with burlesque companies was increased from \$85 to \$90 weekly.

Circus band salaries were increased from \$32 per man to \$40 weekly, with leaders' salaries increased from \$55 to \$63.

The International Moulders' Union of North America will take a referendum vote of its members early in the fall on a proposal to provide for an additional \$500 death and disability benefit. The proposal was approved by the members of the local union at Hamilton, Ontario, at a recent meeting.

Co-operative Societies in Saskatchewan

The annual report of the Co-operation and Markets Branch of the Saskatchewan Department of Agriculture, covering the year ended April 30, 1925, gives a complete list of the co-operative group in Saskatchewan, as follows:—

The Saskatchewan Co-operative Elevator Company.

The Saskatchewan Co-operative Creameries.

The Municipal Hail Insurance Association.

The Saskatchewan Agricultural Co-operative Associations (trading live stock shipping community grazing, community halls).

The Saskatchewan branch of the Canadian Co-operative Wool Growers.

The Trading Department of the Saskatchewan Grain Growers' Association.

The Saskatchewan Co-operative Stock Yards (Northern and Southern).

The Saskatchewan Co-operative Registered Seed Growers' Association, and the two pools.

The Saskatchewan Co-operative Wheat Producers.

The Saskatchewan Co-operative Poultry Producers.

Notes on co-operation in Saskatchewan appeared in the January and July issues of the LABOUR GAZETTE (pages 17 and 649)

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Employment Regulations under Alberta Public Health Act

New regulations have been issued under the Public Health Act of Alberta in connection with the employment of persons affected with infectious disease in a communicable form. Such persons may not engage or be employed in any work in connection with the looking after of bedrooms in a hotel or rooming house. The regulations provide that the Local Board may examine any person who may be engaged in such occupation, work or service who is suspected of having any contagious or infectious disease in a communicable form, or the Local Board may require such person to furnish it with a certificate from his medical adviser with regard to his condition in respect to any such disease. No person affected with any such disease shall continue in such work, employment or service unless and until a free examination has been made and he is found to be free from such disease.

Another regulation makes similar provision in regard to employment which requires or occasions the handling of any food, liquid or material intended for food or drink for human consumption, or the handling of any dish or other article used in the preparation or serving of food or drink for human consumption. This regulation is not to apply to any person who handles such food or liquid, or food products exclusively while contained in wrappers, boxes, cases or other containers, or who handles such food or liquid or food products by mechanical means in such manner that such food cannot come in contact with the hands or any portion of the body of such person.

Ontario Mining Association to Study Accident Prevention

The Ontario Mining Association at their annual meeting in July, discussed the problem of accident prevention, and a committee was named to study means to decrease the accident rate. The Association approved the increased assessment of employers now called for by the Workmen's Compensation Board as being necessary to meet the cost of accidents. Attention was directed to the need of impressing on new employees the necessity of obeying regulations concerning safety and of recognizing danger signs. Accidents among foreigners who do not speak English might sometimes be averted, it was claimed, if they were helped to learn the language.

Paper Mills Conduct Accident Prevention Contest

On July 1 last, the Sault Ste. Marie plant of the Spanish River Pulp and Paper Mills entered into a friendly competition with the Laurentide Company of Grand Mere, Quebec, which has a splendid record in the matter of accident prevention, in an attempt to reduce the frequent and severity of accidents to a minimum. The contest will run for three months. Certain rules and regulations have been adopted. Mr. A. P. Costigane, of Toronto, safety engineer of the Ontario Pulp and Paper Makers' Association has been appointed judge, his name having been submitted by both sides.

Painters' Objections to Spraying Machine

The paint-spraying machine was condemned at a recent conference of organized painters at Washington. In a study of the spray gun in operation Dr. Sharpe of the University of Toronto, found that when the gun was in operation a mist could easily be seen 10 feet or more to the side of the operator. Plates exposed for half an hour during the operation showed that lead was deposited 11 feet to the right of the operator and three feet behind him. Shoes and clothing of the operator showed a fine coating of paint and the edges of the nostrils were coated by paint. The numerous poisons a painter works with could be taken into the system either by inhalation or absorption and required very little to cause serious illness. Experiments showed that the breathing of one-thirtieth of a grain of lead per day was the limit which a normal person can inhale without symptoms of poisoning. Two or three parts of benzol to 100,000 parts of air breathed for a few hours, was sufficient to cause loss of consciousness, and the other poisons used in the trade were just as deadly. Turpentine caused paralysis and disease of the heart and kidneys, and lead affected every part of the body, causing in many instances complete paralysis and insanity.

The painters claimed that when clean work is demanded they can successfully compete with the spray guns, and the fact that members use the machine in water colors or other materials of a non-poisonous nature was sufficient proof that they were not attempting to block progress in the use of labour-saving machines.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Progress of Ratifications

THE International Labour Office publishes in *Industrial Labour Information* for July 27 its periodical diagram showing the measures taken or in progress in different countries for the ratification or application of Draft Conventions adopted by the International Labour Conference, in so far as such measures have come to the knowledge of the International Labour Office. An analysis of the diagram gives the following results:

First Conference (Washington, 1919):—Ratifications registered, 66 (hours convention, 7, including two conditional; unemployment, 18; childbirth, 4; night work for women, 14; minimum age in industry, 10; night work of young persons, 13).

Second Conference (Genoa, 1920):—Ratifications registered, 27 (minimum age at sea, 11; unemployment indemnity, 6; employment for seamen, 10).

Third Conference (Geneva, 1921):—Ratifications registered, 68 (minimum age in agriculture, 9; rights of association for agricultural workers, 13; workmen's compensation in agriculture, 8; white lead, 8; weekly rest in industry, 10; minimum age for trimmers and stokers, 10; medical examination of young seamen, 10).

In addition, about 40 ratifications have been authorized but not yet registered, and over 100 more have been recommended.

Great Britain and the Maritime Conventions

The Merchant Shipping (International Labour Conventions) Bill passed its third reading in the British House of Commons on June 18. Some account of this measure was given in the April and May issues of this GAZETTE. Before the third reading was passed in the House of Commons, a Government amendment was adopted to bring the bill into conformity with the Conventions by omitting the words "or pilotage" from the above amendment. The effect of this is to make the bill applicable to vessels navigating within the limits of the jurisdiction of the pilotage authority of the port at which they are regularly employed, but not to vessels of the kinds defined whose ordinary course of navigation does not extend beyond the limits of the jurisdiction of the harbour authority.

Germany and the Conventions

Early in the present year the German Reichstag approved four Conventions (unemployment, employment facilities for seamen, rights of association in agriculture, and workmen's compensation in agriculture), and the formal ratification of these Conventions by Germany was registered in June. The German Government states that it did not again submit to the Reichstag the bills relating to certain Conventions adopted by the International Labour Conference at its first three sessions, to which the Reichsrat had already given its approval. The Reichsrat, or Upper House, gave its approval to the Washington Convention concerning unemployment, to all the Genoa Conventions, and to all the Conventions of the Geneva, 1921, conference, with the exception of that concerning the application of the weekly rest in industrial undertakings. It adjourned any consideration of the Washington Conventions concerning hours of work, night work of women, minimum age for admission of children to industrial employment, and night work of young persons, and also the Convention of the Geneva, 1921, Conference concerning the application of the weekly rest in industrial undertakings. The ratification of the Conventions in question cannot be effected, even after their approval by the Reichstag, until the necessary provisions for their application in Germany have been given the form of law. It appears that, in order that the Conventions may be applied, certain amendments, not of a fundamental kind, must be made in the legislation at present in force. For this reason, the Conventions in question will be submitted to the Reichstag at the same time as the respective bills for their application. These bills are now in course of drafting.

France and the Hours Convention

On July 8 the French Chamber of Deputies unanimously adopted the bill introduced by the Government in July 1924 for the ratification of the Washington Hours Convention. The bill provides that ratification shall only take effect in France when the Convention has been ratified by Germany. The Chamber, in adopting the bill, maintained this condition and rejected a proposed amendment in favour of the unconditional ratification of the Convention. During the debate it was pointed out that there were some differences between the Convention and the French Act

of April 1919, which allowed of the application of the new system in stages in certain industries. Such gradual application was not allowed by the Convention. Moreover the act of 1919 did not specify, as did the Convention, the rates for overtime pay and the administrative regulations under the Act

merely referred to local customs. In both cases, however, it would be easy to adapt the French legislation to the Convention. Overtime rates in France, it was stated, were not so very different from those provided for by the Convention. As regards the application of the Act in stages, the stages

THE CANADIAN DELEGATION AT THE SEVENTH INTERNATIONAL LABOUR CONFERENCE, GENEVA.

This photograph was taken in front of the International Labour Office in Geneva. Left to right—Sir Herbert Ames, Financial Director General of the League of Nations, and his secretary, M. Bieler; H. H. Ward, Deputy Minister of Labour, Ottawa; Pierre Beaulé, President Catholic Workers Confederation, Quebec; Dr. W. A. Riddell; Miss Henderson, secretary to Dr. Riddell; Gustave Francq, chairman, executive, Trades and Labour Congress, Montreal; John Lowe, employers' delegate; Hon. Forbes Godfrey, Minister of Health and Labour, Toronto; H. Macdonald, legal secretary, C.M.A., Toronto; D. A. Stevenson, intelligence officer, International Labour Office; P. M. Draper, secretary-treasurer, Trades and Labour Congress, Ottawa; Norman Mackenzie, legal adviser, International Labour Office; Hon. Lauréat Lapierre, M.P.P., Quebec.

were, if not completed, at least very nearly completed. There was nothing therefore from the legislative point of view which would prevent the ratification of the Washington Convention.

The Director's visit to South America

In response to reiterated invitations from the Governments of the South American Republics, Mr. Albert Thomas, Director of the International Labour Office, left Geneva on June 28 to visit Brazil, Uruguay, Argentina and Chile. The need for a direct effort to make the work of the International Labour Organization more widely known in the States

of Latin America has frequently been emphasised by the representatives of those States, and it is hoped that the personal contact which the Director will establish during his visit, not only with Governments but with the industrial organizations of employers and workers, will contribute to that end, while at the same time stimulating the progress of ratification of International Labour Conventions by the several countries.

"Industrial Safety Survey"

The second issue of this valuable publication has reached the Department. An account of its origin and aims was given in the May

issue of this GAZETTE. The new number continues the study of Safety Education in Industry, giving reproductions of effective posters designed to call the attention of workers to the dangers of their employment and the need for caution. These posters show a wide range in their method of treating the same topic, owing to the different mental characteristics of the people in the different countries for whom they are intended. The American output of safety posters runs into thousands, the National Safety Council alone publishing 36 a month. In Great Britain about 100 industrial safety posters have been published, in Germany about 70, and in the Netherlands 35. Corresponding figures were not available for Canada, Chile or Japan. Posters have also been prepared by the French and Belgian Association for accident prevention. A useful method of safety instruction, which originated in America, relies on some form of friendly competition in order to engage the sporting instincts of the worker in the interests of safety.

The *Survey* lays stress on the moral obligation resting on industry to protect the workers, rather than on the economic benefits to be derived from preventive measures. "Disillusionment as to the financial benefits of accident prevention may injure the work itself. It is a wiser and safer policy not to rely on these possibilities but to cling resolutely to the fundamental principle that the adoption of every possible means of accident prevention is an imperative social and ethical obligation which must be scrupulously discharged, even at the cost of material sacrifices from the individual and the community."

Another section of the magazine contains an account of the work of the safety institutions and associations in various countries, including Belgium, Canada, France, Germany, Great Britain, and the United States. The legislative section consists of an account of recent acts and regulations, safety codes and official reports.

The issue also contains a useful summary of recent publications which deal with various aspects of the industrial safety.

ANNUAL CENSUS OF INDUSTRY IN CANADA

THE Dominion Bureau of Statistics, under the Statistics Act of 1918, issues an annual industrial census, including statistics of fisheries, mining, forestry and general manufacture in Canada. The annual census is in addition to the Bureau's decennial census and the statistics of population, finance, education, etc. Preliminary reports on various industries have been reviewed in previous issues of the LABOUR GAZETTE. These preliminary reports are consolidated from time to time in general reports issued by the Bureau.

The Pulp and Paper Industry, 1924

A preliminary report on the pulp and paper industry for 1924 has just been issued. This industry includes three branches: operations in the woods with pulpwood as a product, manufacture of pulp, and manufacture of paper.

The total capital invested in the industry in 1924 was \$459,457,696 as compared with \$417,611,678 in 1923. The total value of pulpwood produced showed an increase of 1.2 per cent. The total value of pulp produced decreased by 8.8 per cent in value, while the value of paper produced increased by 4.1 per cent. If the net value of production for the entire industry be considered as the sum of the values of pulpwood, pulp and paper pro-

duced then the total for 1924 was \$187,174,703, as compared with \$188,642,109 for 1923, \$158,483,377 for 1922, \$154,641,077 for 1921, and \$224,414,131 for 1920. The maximum, which was reached in 1920, was followed by a decided decrease in 1921, but the figures for 1922 and 1923 show increases. The small decrease in 1924 was due to a falling off in the value of exports of raw pulpwood and to decreases in the manufacture and exports of pulp. The manufacture and exports of paper both show satisfactory increases.

There were 115 mills in operation in Canada in 1924 as compared with 110 in 1923. Quebec had 49 mills, Ontario 46, Nova Scotia, 9, British Columbia 6, and New Brunswick 5. Of these mills, 46 manufactured pulp only; 34 were combined pulp and paper mills, and 35 manufactured paper only. The 80 mills manufacturing pulp produced 2,465,011 tons valued at \$90,323,972, as compared with 2,475,904 tons valued at \$99,073,203 in 1923, representing a decrease of 0.4 per cent in quantity and 8.8 per cent in total value. Of this total 1,497,564 tons, valued at \$44,460,141, were made by combined pulp and paper mills for their own use in the manufacture of paper, 266,975 tons valued at \$14,460,176 were manufactured for sale to paper mills in Canada, and 700,472 tons, valued at \$31,403,655, were manufactured for export.

The 69 mills manufacturing paper in 1924 produced 1,718,741 tons of paper, which with certain miscellaneous pulp products were valued at \$133,395,673, as compared with 1,589,303 tons, valued at \$128,089,609, in 1923, an increase of 8.1 per cent in quantity and of 4.1 per cent in total value. Newsprint made up 80.8 per cent of the paper manufactured in 1924, amounting to 1,388,081 tons, valued at \$100,276,903, as compared with 1,251,541 tons, valued at \$93,213,340 in 1923, an increase of 10.9 per cent in quantity and of 7.6 per cent in total value. The production of newsprint in the United States during 1924 was about 1,471,000 tons.

The apparent total production of pulpwood was 4,647,201 cords, valued at \$57,777,640, as compared with 4,654,663 cords, valued at \$57,119,596 in 1923. Of the total for 1924 about 71.4 per cent was manufactured into pulp in Canada, while the remaining 28.6 per cent was exported to the United States.

The total number of employees on salaries and wages was 27,627 in 1924, and the total payroll was \$37,649,485, as compared with 29,234 employees in 1923 with wages and salaries amounting to \$38,382,845. The employees in 1924 included 2,993 salaried employees (2,528 male and 465 female) and 24,632 employees on wages (23,727 male and 905 female).

The Silk Industry, 1923

The number of silk mills reporting during 1923 was seven, of which 5 were in the province of Quebec and 2 in Ontario. The total amount of capital invested in the industry was \$4,594,313, as compared with \$4,618,448 in the previous year; the total value of products was \$5,044,968 in 1923 and \$4,675,205 in 1922. The items showing the greatest increase were silk and artificial silk threads and yarns, which in 1923 totalled \$2,409,416, as compared with \$1,908,637 in 1922.

Statistics of employment for 1923 compared with 1922 showed a decrease of 10 in the number of persons employed, and of \$12,094 in the total payments of salaries and wages. The average employment per months for the whole year was 312 males and 823 females. Employees increased in number during the last six months over the first six months, by 4 per cent, the increase being principally confined to male employees. The months of highest employment were July and August, and those of lowest employment were January and February. The total number of employees during the year was 1,457 (502 male and 955 female), and the total amount paid in salaries and wages was \$1,224,036. Four-

teen male salaried officers of corporations were paid \$93,381; 16 general superintendents, managers, etc., of whom one was a female, received \$56,915; 5 male technical experts received \$10,939; 287 (156 male and 131 female) clerks, stenographers, salesmen, etc., received \$318,797; and 1,135 (312 male and 823 female) wage earners received \$744,004. The average working time whether full or part time in 1923 was 293.28 days; the average time in which plants were idle was 10.71 days. Employees worked an average of 9 hours per day and 49.71 hours per week.

The Button Industry, 1923

Reports were received from 20 establishments manufacturing buttons in 1923, of which 14 were in the province of Ontario, 3 in British Columbia, 2 in Quebec and 1 in Alberta. Capital invested in the industry amounted to \$1,414,602, and of this amount \$1,356,020 was invested in Ontario. The total capitalization for 1923 showed an increase of \$51,262 over the previous year. The total value of production in 1923 was \$1,099,035, compared with \$1,203,240 in 1922.

The total number of employees in all classes fell from 573 in 1922 to 533 in 1923, a decrease of 40, and the amount of the payroll decreased from \$503,445 in 1922 to \$490,074 in 1923. The maximum number of employees at work in 1923 was 483 in April, whilst the minimum number reported was 401 in December. Salaried officers of corporations numbering 19 males were paid \$55,420; 16 male general superintendents and managers were paid \$48,128; 7 male technical experts, accountants, etc., were paid \$14,240. 29 (14 male and 15 female) clerks, stenographers, salesmen, etc., were paid \$36,499. 24 female outside piece workers were paid \$3,364, and 438 wage earners (206 male and 232 female) were paid \$332,423. The number of days in operation on full time averaged 262, on part time 32.4, and idle 7.6. The hours worked by wage earners per day averaged 8.3 and per week 47.4.

The Paper Box and Bag Industry, 1924

A preliminary report on the paper box and bag industry in Canada for 1924 shows that this is one of the most important of the secondary manufacturing industries depending on the pulp and paper industry for raw material. The report covers only those firms which specialize in the manufacture of stiff, folding and corrugated boxes, cartons and other paper board containers and paper bags. These firms also manufacture in many cases, envelopes,

egg case fillers, paper drinking cups, bottle wrappers, mailing tubes and other miscellaneous products.

There were 94 firms engaged in the manufacture of paper boxes and bags as their principal product with an investment of \$15,678,478. Fifty-eight of the firms were in Ontario, 23 in Quebec, 6 in Manitoba, 4 in New Brunswick, and 3 in Alberta and British Columbia. The total value of all the products in 1924 was \$9,283,849, being made up chiefly of stiff boxes valued at \$3,297,250; folding boxes valued at \$2,412,554, corrugated boxes and wrappers valued at \$1,643,885, and paper bags valued at \$963,334. Ontario led the other provinces in the value of these commodities with Quebec, Manitoba, New Brunswick, British Columbia and Alberta following in the order in which they are named.

The industry gave employment to 41,309 people, including 509 salaried employees (371 male and 138 female), and 40,800 wage earners (17,152 male and 23,648 female). Salaries and wages paid totalled \$3,543,193, of which \$1,144,831 was paid for salaries, and \$2,398,362 for wages. Of the total number of employees, 26,298 were in Ontario, 12,200 in Quebec, 1,222 in Manitoba, 751 in New Brunswick and 838 in Alberta and British Columbia. The average monthly employment during the year was 3,400, November being the month of highest employment, with 3,612 persons employed. The average days in operation, per mill on full time, was 267 days, on part time 24 days, and the average number of idle days was 15.

The Lumber Industry, 1923

The report on the lumber industry in Canada in 1923 is divided into two sections, namely, the operations in the woods, and the saw mill operations. The total net value of the products of the industry was \$258,270,326.

Logging.—Operations in the woods are carried on during the fall, winter and spring months generally throughout Eastern Canada, with November, December and January as the months of highest employment, and July and August the months of minimum employment. This condition is fairly uniform in Eastern Canada from year to year, depending on snow and frost conditions. In British Columbia, however, conditions are reversed, with the highest employment during the summer months and the lowest during the winter season, but with less seasonal variation than in the eastern provinces. The season is longest in British Columbia and shortest in Manitoba.

Returns were received from 600 operators in 1923 as compared with 694 in 1922. The number of employees engaged in the woods operations in 1923 was 33,795, of whom 39 were females. Of this number 519 were superintendents and managers, 963 were clerks and other salaried employees, and 32,313 were employees on wages. There were 14,826 persons employed in Ontario, 8,941 in British Columbia, 6,698 in Quebec, 1,498 in New Brunswick, 746 in Nova Scotia, 612 in Saskatchewan, 310 in Manitoba, and 164 in Alberta.

The total amount paid in salaries and wages was \$28,010,671, of which \$1,361,356 was paid to superintendents and managers, \$1,224,164 to clerks and other salaried employees, and \$25,425,151 to employees on wages. The largest amount was paid in British Columbia, where the employees received \$12,309,185; in Ontario, with considerably more employees, the amount paid was \$9,491,660, and in Quebec \$4,430,300. The average wage paid for all classes in Canada was \$829, an average of \$2,623 for superintendents and managers, \$1,271 for clerical employees, and \$787 for wage earners. The earnings of the wage-earners, however, covered employment for an average of only 182.6 days in the year, as compared with 158.9 days in 1922.

The total capital invested in the industry was \$29,867,297, of which \$13,531,956 was invested in British Columbia. Over 58 per cent of British Columbia's portion was invested in machinery, as compared with 20 per cent of the investment in Eastern Canada where power logging is not so highly developed.

The products of the woods operations included 3,163,589,000 feet, board measure, of logs and boom timber valued at \$55,625,274; 70,283,000 feet, board measure, of square and waney timber valued at \$1,525,572, 15,277,059 cords of pulpwood valued at \$20,534,394, 3,024,457 hewn ties valued at \$1,935,797; 702,273 cords of bolts valued at \$435,291; 161,288 poles valued at \$347,691, mining timber valued at \$175,842; piling valued at \$121,067; 17,492 cords of firewood valued at \$92,051; and all other products valued at \$281,109, making the total value of the products \$31,074,088 as compared with products valued at \$58,668,929 in 1922.

Sawmills.—There was a decrease in the number of saw mills reporting from 2,922 in 1922 to 2,883 in 1923, the decreases being in Quebec, New Brunswick, Manitoba and Saskatchewan while increases took place in the other provinces. In Quebec there were 144 fewer mills reporting in 1923. The capital

invested in the mills showed a decrease from \$162,835,219 to \$155,638,059, the decreases being in Quebec, New Brunswick, Nova Scotia, Saskatchewan and Alberta.

The value of the products showed an increase, however, from \$114,324,580 in 1922 to \$139,894,677 in 1923. The production of sawn lumber increased by 18.8 per cent, and the average value per thousand increased by \$2.10. Lath production increased by 11.9 per cent in quantity, but decreased by four cents a thousand in average value. Shingle production increased in quantity by 8.4 per cent, but decreased in average value per thousand by sixty-one cents, causing a decrease in total value of 7.5 per cent. The cutting-up and barking or rossing of pulpwood is now an important feature of the industry. During 1923 755,933 cords of pulpwood, valued at \$9,730,861, were so treated, as compared with 638,208 cords, valued at \$8,273,686, in 1922. Other products and by-products of the saw mills and allied industries were valued at \$5,931,413 in 1923, as compared with \$5,409,314 in 1922.

The total number of employees increased from 31,891 in 1922 to 35,070 in 1923; superintendents and managers decreased in numbers from 871 in 1922 to 687 in 1923; clerks and other salaried employees increased from 1,263

in 1922 to 1,515 in 1923; and employees on wages from 29,757 in 1922 to 32,868 in 1923.

The average annual earnings per employee increased by about ten per cent, the increase of wage earners being a little above and that of clerical workers and managers, below the average. As saw-milling is largely a seasonal occupation the average annual wages represent only earnings during that part of the year in which the mill is in operation. During 1923 the average saw mill in Canada was in operation for only 94.5 days and in 1922 90.2 days out of the 304 working days in the year. In British Columbia weather conditions permit of operation during a longer period than in eastern Canada, and in this province the average mill operated 197.9 days as compared with 180.6 days in 1922. The average number of hours per shift throughout Canada was 9.6 in 1923 as compared with 9.8 in 1922, and the hours worked per week were 56.4 as compared with 57.7 in 1922. June was the month of highest employment for the Dominion as a whole and in the provinces of Nova Scotia, Quebec, Ontario, Manitoba and British Columbia. There is, however, considerable variation in every province.

The following table gives some of the principal statistics of the saw mill operations by provinces:

EMPLOYMENT, WAGES, ETC., IN SAWMILLS IN CANADA, BY PROVINCES, IN 1923

Provinces	Mills in operation	Capital invested	Employees	Salaries and wages	Value of products
		\$		\$	\$
Prince Edward Island.....	42	147,669	38	13,429	89,614
Nova Scotia.....	331	2,666,589	1,363	661,710	2,755,748
New Brunswick.....	187	23,286,654	4,386	3,447,881	10,388,674

Association of Governmental Labour Officials of United States and Canada

The Association of Governmental Labour Officials of the United States and Canada held their Twelfth Annual Convention at Salt Lake City, Utah, on August 13-15. Mr. H. C. Hudson, of the Employment Service of Canada, is second vice-president of the Association. The Honourable James Murdock, Minister of Labour for Canada, had intended to be present, but was prevented by other engagements from attending. Mr. Fred W. Armstrong, of the Workmen's Compensation Board of Nova Scotia, contributed a paper on the subject of the treatment of occupational diseases in connection with workmen's compensation. Sessions were de-

voted to the study of the following subjects:—recent labour legislation; employment, including harvest labour and rehabilitation; inspection and safety, including mine safety, etc.; women and children in industry; workmen's compensation, including occupational diseases and accident reporting; minimum wages; collaboration of government officials with the International Labour Office; labour statistics; interstate co-operation in labour administration, etc.

The International Association of Industrial Accident Boards and Commissions held their annual convention also at Salt Lake City, commencing on August 17.

WAGES AND HOURS OF LABOUR IN VARIOUS INDUSTRIES IN THE UNITED STATES

THE United States Bureau of Labour Statistics issues from time to time reports on wages and hours of labour in various industries.

Lumber manufacturing (sawmilling)

Bulletin No. 363 deals with wages and hours in sawmills in 1923 and compares the figures with those for previous years covered in similar reports. The information was secured by special agents of the Bureau from representative sawmills, the data being taken by the agents from the payrolls of 252 sawmills.

Of the 252 mills scheduled 3 made no report, 48 reported no net change in wages since July 1, 1921; 8 mills reported net reductions, one of which amounted to 25 cents per day and 7 ranged from 4 per cent to 20 per cent, or an average of 14 per cent decrease per mill; 193

mills reported net increases for the same period. Of this number, 118 ranged from 1 per cent to 50 per cent, or an average increase per plant of 16 per cent; 37 mills made increases averaging 52 cents per day per mill; 33 mills averaged increases of 8 cents per hour per mill, and 5 mills report a percentage and hourly or daily rate combined.

Of the 252 mills canvassed 11 reported payment of 50 per cent increase for overtime work. Ten of these mills are located on the Pacific coast and one in Maine. The other 241 mills pay the same rate for overtime as for regular time. Apart from the above, some mills pay workers, in the skilled mechanical trades only, an extra rate for overtime.

The figures published in the report show that wages in the industry substantially increased between July 1, 1921 and 1923.

AVERAGE FULL-TIME HOURS PER WEEK, EARNINGS PER HOUR AND FULL-TIME EARNINGS PER WEEK, TOGETHER WITH INDEX NUMBERS THEREOF, IN SAWMILLS IN THE UNITED STATES, 1907 TO 1923, BY OCCUPATION AND YEAR (1913=100)

Occupation	Year	Number of Establishments	Number of employees	Average full-time hours per week	Average earnings per hour	Average full-time earnings per week	Index numbers for		
							Full-time hours per week	Earnings per hour	Full-time earnings per week

	1923	94	180	170

The above extract from the tables shows the wages per hour and per week of two of the most numerous classes in the sawmills, namely "sawyers, head, band" and labourers. It will be observed that the wages of the sawyers have been substantially higher than those of

the labourers, but have not increased as much proportionally as those of the labourers. The wages of "gang sawyers" and "resaw sawyers" were higher than those of the labourers, but lower than those of the "sawyers, head, band" being \$27 and \$32 per week in 1923. These

showed about the same increase per cent from 1913 to 1923 as the labourers, however, namely about 70 per cent. The tables indicate that the wages in this industry were higher in 1919 but the report states that the peak was probably in 1920, a year for which figures were not secured.

The report also tabulates by states the amounts of timber sawed by kinds of lumber; the average number of days of operation and of days idle; the number of mills, classified by number of head saws operated, with total number of head saws, average number per mill, average number of days the mills operated, and average number of days of operation per head saw, for year ending June 30, 1923. There is also a cumulative table of duration of operation of head saws in the same year, and one of establishments classified as to full-

time hours per day and per week in 1923. In each case the classification is given by states.

In addition to the text tables, four general tables are presented showing detail information for 1923.

Hosiery and Underwear

Bulletin No. 376 deals with wages and hours of labour in the hosiery and underwear industry, 1907 to 1924. The information for 1924 covers 10,146 male workers and 28,403 female workers in 143 establishments.

The following table is a summary of a table of "average hours and earnings and classified full-time hours per week, by occupation, sex and year, 1907 to 1924," and gives the figures for all occupations for the years 1914, 1922 and 1924.

AVERAGE HOURS AND EARNINGS AND CLASSIFIED FULL-TIME HOURS PER WEEK, BY OCCUPATION, SEX, AND YEAR, IN THE HOSE AND UNDERWEAR INDUSTRY IN THE UNITED STATES, 1907 TO 1924

Occupation, Sex and Year.	Number of establishments	Number of employees	Average full-time hours per week	Average earnings per hour	Average full-time earnings per week	Per cent of employees whose full-time hours per week were:						
						Under 48	48	Over 48 and under 54	54	Over 54 and under 57	57 and under 60	Over 60
				\$	\$							
All Occupations:—

(1) Less than one per cent.

The following table shows index numbers of customary full-time hours per week, earnings per hour, and full-time earnings per week for the industry, 1910 to 1924, by specified years (1913=100):—

Year	Index Numbers of average		
	Full-time hours per week	Earnings per hour	Full-time earnings per week
1910.....	104	82	85
1911.....	104	84	87
1912.....	102	89	91
1913.....	100	100	100
1914.....	99	103	102
1919.....	94	219	206
1922.....	92	216	199
1924.....	91.7	237.8	218.1

The bulletin also gives information by states, about rates for overtime and for work on Sundays and holidays, and bonus systems, average hours and earnings in 1924, days of operation and days idle, and number of days worked in one pay period.

Most of the space in the bulletin is taken up by the general tables for 1924, all of which give the information by states.

Tables of index numbers are given for full-time earnings per week and average earnings per hour, from 1907 to 1924, the figures for 1913 being used as the base. For three of the principal occupations these figures are as follows:—

Occupation, sex and year		Index numbers of average			
		Full-time hours per week	Earnings per hour	Full-time earnings per week	
Finishers, underwear (Female):—	1907	107	86	92	
	1908	107	82	88	
	1909	107	80	86	
	1910	106	82	86	
	1911	106	80	85	
	1912	104	84	87	
	1913	100	100	100	
	1914	100	98	97	
	1919	95	161	153	
Inspectors and folders, hosiery and underwear (Female):—	1922	92	178	163	
	1924	91.0	204.9	186.4	
	Knitters, web or tube, underwear (Male):—	1910	105	86	90
		1911	105	86	90
1912		103	89	92

Knitters, web or tube, underwear (Male):—	1922	94	180	169	
	1924	92.6	212.0	197.2	

Iron and Steel

Bulletin No. 381 deals with wages and hours of labour in the iron and steel industry, 1907-1924. The report covers wage earners in 10 departments: blast furnaces, bessemer converters, open-hearth furnaces, puddling mills, blooming mills, plate rail mills, standard rail mills, bar mills, sheet mills and tin-plate mills. The greater part of the information was ob-

tained through agents; the remainder through correspondence; 19 schedules were obtained from separate departments of plants. The following table shows how these are distributed by department and district.

Each department of an establishment has been counted as a separate plant.

In the summer of 1923 a general reduction of working time was begun in the industry, the results of which are shown in the report. In 1922, 69 per cent, and in 1924, 9 per cent of blast furnace employees worked 72 hours or more per week. Similarly employees in the Bessemer converting department were reduced from 67 per cent working 72 hours or over to only 2 employees; the proportion of employees on open-hearth furnaces was reduced from 64 per cent to 7 per cent; in blooming mills, from 57 per cent to 3 per cent; in plate mills, from 39 per cent to 3 per cent; in bar mills, from 16 per cent to 3 per cent.

While full time hours per week were reduced, the number of turns per week increased in a number of departments. In open-hearth furnaces, 52 per cent of employees reported in 1924 worked 7 days per week, with 32 per cent additional varying from 6 to 7 days. This was the largest amount of 7-day work reported for any year shown. Seven-day work also increased in blast furnaces and blooming mills.

The increase in hourly earnings more than offset the reduction in hours, and earnings per week showed an increase in all departments except plate mills. The following table shows average earnings per hour of common labourers by years, from 1907 to 1924, in specified departments, for all districts.

NUMBER OF PLANTS AND OF EMPLOYEES IN THE IRON AND STEEL INDUSTRY IN THE UNITED STATES SHOWN ON PAY ROLLS IN 1924, BY DEPARTMENT AND DISTRICT

(1) Including earnings of common labourers in rail mills although average earnings for that department are not shown separately in this table.

(2) Including earnings of common labourers in rail mills although district earnings for 1924 do not include them.

The following information taken from the major statistical tables appearing in each of sections under the several departments illustrates the general trend of hourly wages during the period.

Keepers in blast furnaces received an average of 20.5 cents per hour in 1909 as compared with 63.5 cents in 1920. The average was reduced in 1922 to 42 cents per hour, but increased again in 1924 to 57.9 cents. Labourers received 13.8 cents per hour in 1909, 47.4 cents in 1920, 31.5 cents in 1922 and 40.1 cents in 1924. Vesselmen in Bessemer converters received 49.9 cents per hour in 1914, \$1.273 in 1920, 89.7 cents in 1922 and \$1.166 in 1924. Steel pourers increased from 43.9 cents per hour in 1908 to \$1.326 in 1920, dropped to 90.5 cents in 1922, but were increased to \$1.073 in 1924. Charging machine operators in open hearth furnaces increased from 28.7 cents per hour in 1911 to 89.5 cents in 1920, fell back to 62.5 cents in 1922, and were increased to 86.3 cents in 1924. Puddlers, level-handed, in puddling mills received 39.2 cents per hour in 1915, but were increased to \$1.227 in 1920. A reduction of approximately 50 per cent was suffered in 1922, but the average was increased again in 1924 to \$1.051. These are only samples of the averages shown for each principal productive occupation for each department for each year for which material is available.

In addition to the data showing averages for the principal productive occupations separately, index numbers for average full-time hours per week, average earnings per hour and average full-time earnings per week are shown for each department as a whole, based on the averages of 1913 as the base, or 100.

Boot and Shoe Industry

Bulletin No. 374 covers wages and hours of labour in the boot and shoe industry, 1907 to 1924. The data for 1924 cover 27,144 males and 18,316 females in the industry.

The wage peak of the industry was reached in 1920, at which time the general level of hourly earnings was two and one-third times that of 1913, and two and one-half times that of 1910. Between 1920 and 1922 average hourly earnings decreased about 10 per cent, and between 1922 and 1924 increased 3 per cent.

Regular or customary working hours per week decreased 11 per cent between 1913 and 1924. Because of this reduction of hours, full-time weekly earnings did not increase in the same proportion as hourly earnings. Full-time weekly earnings in 1920 were a little more than twice the earnings of 1913, with a drop of about 6 per cent between 1920 and 1924. The changes in earnings and hours are shown by index numbers for the industry as a whole.

The data for each of the years covered in this bulletin were taken by agents of the bureau directly from the records of the establishments. The number of establishments furnishing data varied from year to year, ranging from 26 in 1907, the initial year, to 143 in 1918. A total of 106 establishments were covered in 1924. The 1924 data were taken from the January records of 70 factories, from the February records of 23 factories, from the March records of 6 factories, and from April records of 7 factories. The mass of the data, therefore, is as of January and February.

The following table of index numbers for the years 1910 to 1924, for the industry as a whole, compares full-time hours per week,

earnings per hour, and full-time earnings per week;

Year	Index of full-time hours per week	Index of hourly earnings	Index of full-time weekly earnings
Selected occupations:			
1910.....	103	92	94
1911.....	102	94	96
1912.....	101	93	93
1913.....	100	100	100
All occupations:			
1914.....	99	101	100
1916.....	99	108	107
1918.....	95	140	133
1920.....	88	232	204
1922.....	88	208	185
1924.....	89	214	191

The principal table in the report gives average hours, and earnings, and classified full-time hours per week, by department, occupation, sex and year, 1907-1924. The follow-

ing extract from this table shows the data for two of the most numerous classes, with classified full-time hours per week omitted:—

AVERAGE HOURS AND EARNINGS AND CLASSIFIED FULL-TIME HOURS PER WEEK, BY DEPARTMENT, OCCUPATION, SEX, AND SPECIFIED YEAR, 1907 TO 1924

Occupation, sex, and year	Number of establishments	Number of employees	Average full-time hours per week	Average earnings per hour	Average full-time earnings per week
Cutters, vamp and whole shoe, hand (Male):					
1907.....	20	919	54.9	0.325	(1)
1908.....	20	907	54.8	.332	(1)

1922.....	84	1,915	48.3	.787	38.11
1924.....	88	2,009	48.4	.838	40.56
Vampers (Female):					
1907.....	22	351	55.7	.246	(1)
1908.....	22	321	55.9	.242	(1)
1909.....	22	391	55.5	.253	(1)
1910.....	53	863	56.9	.238	13.46
1911.....	71	1,124	56.5	.238	13.46
1912.....	79	1,088	55.1	.230	12.68
1913.....	79	1,072	54.7	.246	13.45
1914.....	85	1,116	54.1	.243	13.14
1916.....	121	1,383	53.9	.254	13.66
1918.....	132	1,477	51.7	.312	16.11
1920.....	111	1,313	48.8	.506	25.09
1922.....	98	1,142	49.0	.480	23.54
1924.....	99	1,053	49.4	.519	25.64

(1) No data.

The hours for cutters fell between 1910 and 1924 from 56.3 to 48.4, but earnings per hour rose from \$.319 to \$.838 so that average full-time earnings per week increased from \$17.86 to \$40.56 of 127 per cent for the period. For this occupation the hours most frequently worked per week changed from 54 in 1907 to 48 in 1924.

The average full time hours per week of vampers (female) in the fitting or stitching department, fell from 56.9 in 1910 to 49.4 in

1924. Average earnings per hour rose from \$.238 to \$.519 and average full time earnings per week rose from \$13.46 to \$25.64 or 90 per cent.

For this occupation the frequency table shows that the preponderance of full-time hours per week changed during the period from 57 and under 60 hours to 48 hours, 50 per cent working that length of time per week in 1924.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JULY, 1925, AS REPORTED BY EMPLOYERS

EMPLOYMENT at the beginning of July showed a further increase which was less than in the preceding month, but exceeded that indicated on the same date of any other year of the record. Since employment at the beginning of August in three of the past four years has shown an increase over July, further improvement may be looked for in the next report. The 5,940 firms making returns to the Dominion Bureau of Statistics on July 1, 1925, employed 797,463 persons, or 19,524 more than on June 1. This gain of 2.5 per cent caused the index number (which is based on the numbers employed in January, 1920, as 100) to stand at 96.8, as compared with 94.5 in the preceding month, and with 95.9, 99.5, 91.1 and 87.5 on July 1, 1924, 1923, 1922 and 1921, respectively. The accompanying chart reflects the course of employment since 1923, and shows that the situation at the beginning of July of this year was better than in the same month of 1924, the first time improvement in that respect has been indicated.

With the exception of logging, in which there was a seasonal decline and trade which showed no general change, all industries registered increased activity on the whole. The construction group reported the most extensive gains.

Employment by Provinces

There was improvement in all provinces, that in the Maritime Provinces and Ontario being most marked.

Maritime Provinces.—Very pronounced expansion in highway construction was supplemented by smaller increases in manufacturing, chiefly in lumber and paper mills. Shipping, iron and steel manufacturing and fish canning, on the other hand, were slacker. Statements were tabulated from 563 employers having 74,377 workers, as compared with 67,511 on June 1. Slight additions to staffs were reported on July 1, 1924; the index number was higher than at any time since September, 1923.

Quebec.—In spite of heavy seasonal contractions in logging, and smaller losses in shipping, there was moderate expansion on the whole in Quebec. Manufacturing generally was more fully employed, lumber, food and tobacco works showing the largest gains within the group; there were, however, reductions in textile and iron and steel plants. Construction recorded an important increase

in employment, and steam railway operation, asbestos mining and services were also more active. The working forces of the 1,273 firms making returns aggregated 223,380 persons, which was 1,621 more than they had employed in the preceding month. The situation is rather more favourable than at the same time of last year, when much smaller gains had been noted.

Ontario.—Further improvement was shown in Ontario on July 1, in contrast with the retrogressive tendency indicated at this time last year, and the index number now is very slightly higher. Construction and manufacturing registered the most noteworthy increases on the date under review, but there were also gains in mining, communication, transportation and services. Within the manufacturing division, there were large increases in food, lumber, pulp and paper, rubber, textile, building material, electric current and mineral product plants, but iron and steel and leather factories, on the other hand, recorded curtailment, as is customary at this time of year. Logging also showed seasonal losses on a large scale. A combined working force of 325,594 persons was reported by the 2,701 employers making return, who had 318,683 employees on June 1.

Prairie Provinces.—Increased activity was indicated in this district, 2,907 workers having been added to the staffs of the 753 firms reporting for July 1. They had 101,653 employees. This expansion was rather less than that recorded in the same period of 1924, and employment then was in greater volume. On the date under review, construction, particularly highway construction, transportation, services and mining, registered the largest increases, while manufacturing showed practically no change and trade was slacker.

British Columbia.—The index number of employment in British Columbia was higher on July 1 than at any time since 1920. The increases, which exceeded those noted on the same date of last year, took place largely in lumber and food factories and in mining, construction and services, while logging and iron and steel plants were less fully employed. Reports were compiled from 651 employers whose payrolls aggregated 72,459, as compared with 71,240 on June 1, 1925.

Table I gives index numbers of employment in the five economic areas into which the country is divided in these statistics.

TABLE I—EMPLOYMENT BY ECONOMIC AREAS
(Number employed by reporting firms in January, 1920=100)

District	Relative Weight	July 1, 1925	June 1, 1925	July 1, 1924	July 1, 1923	July 1, 1922	July 1, 1921
Maritime Provinces	9.3	99.4	90.3	90.6	101.0	92.6	89.0
Quebec.....	28.0	101.1	100.6	100.6	100.5	88.0	87.2
Ontario.....	40.8	91.8	89.8	91.4	97.2	89.2	84.2
Prairie Provinces..	12.8	95.9	93.1	99.1	101.4	99.7	94.7
British Columbia..	9.1	108.0	106.5	105.8	103.9	99.2	92.6
Canada.....	100.0	96.8	94.5	95.9	99.5	91.1	87.5

Employment by Cities

Employment increased in all the cities for which separate tabulations are made, but in most cases the gains were comparatively small.

Montreal.—Iron and steel plants were slacker, while construction, tobacco and food works were more active. The working forces of the 694 firms making return aggregated 109,623 as compared with 109,393 on June 1. Employment on July 1, 1924, showed a falling off, but the index number now is only slightly higher than on that date.

Quebec.—General improvement was indicated in Quebec, where 238 persons were added to the staffs of the 90 firms reporting, who had 8,770 employees on July 1. Local transportation and construction showed the largest increases.

Toronto.—There were important gains in manufacturing in Toronto; food, iron and steel, textile, rubber, printing and publishing establishments recorded larger payrolls, while the only significant declines in this division were in leather factories. Communication was also more active, while transportation and construction afforded less employment. Statements were received from 782 employers having 94,630 workers, or 945 more than in their last report. Employment had diminished on the same date of last year, and was then in smaller volume.

Ottawa.—A slight increase was noted in Ottawa, chiefly owing to activity in construction. A combined payroll of 10,623 workers was reported by the 129 firms making returns, who had 10,547 employees in the preceding month. At the beginning of July, 1924, the situation was more favourable than at the present time.

Hamilton.—The upward movement in employment that had been shown without interruption since January continued at the beginning of July, 731 persons being added to the staff of the 201 reporting employers, who had 26,165 workers. Manufacturing, especially

of food products, and construction registered considerable improvement. Employment on the same date of last year had shown a falling off and the index number then was several points lower.

Windsor.—Statistics for Windsor and the adjacent Border Cities were tabulated separately for the first time, and showed that employment increased on July 1, 1925, when the index number stood at 87.1, as compared with 85.2 in the preceding month. Construction was more active, while there were reductions in the iron and steel industry. The 79 firms reporting had 9,481 workers, or 206 more than on June 1.

Winnipeg.—Practically no change was noted in Winnipeg. Improvement in construction was offset by losses in trade and manufacturing. Statements were tabulated from 287 employers having 24,029 persons on the payroll, as against 24,022 in their last report. The index number at the present time is the same as that indicated on July 1, 1924, when improvement on a much larger scale was registered.

Vancouver.—Manufacturing, especially of lumber and tin products, and construction recorded increased activity in Vancouver, where 746 persons were added to the staffs of the 232 employers reporting. They had 23,053 workers on July 1. On the same date of last year reductions were indicated; the index number now is higher than in any month of the last three years.

Table II gives index numbers of employment by cities:—

TABLE II—EMPLOYMENT BY CITIES
(Number Employed by the reporting firms in Jan, 1920=100)

District	Relative Weight	July 1, 1925	June 1, 1925	July 1, 1924	July 1, 1923	July 1, 1922
Montreal.....	13.7	95.7	95.6	94.8	95.9	88.2
Quebec.....	1.1	98.9	95.7
Toronto.....	11.9	87.6	86.7	83.9	89.5	88.4
Ottawa.....	1.3	100.5	100.1	102.3	110.2
Hamilton.....	3.3	86.0	83.9	81.7	91.4
Windsor.....	1.2	87.1	85.2
Winnipeg.....	3.1	85.6	85.5	85.6	87.7	92.8
Vancouver.....	2.9	106.5	103.1	99.0	100.3	97.4

Manufacturing Industries

In contrast with the unfavourable movement indicated on the same date of last year, there was an increase in employment on July 1, 1925, when the staffs of the 3,881 manufacturers reporting stood at 439,617 persons, as compared with 434,925 on June 1. The situation is better than in the corresponding

month in 1924. Lumber, food, pulp and paper, clay, glass and stone, rubber, tobacco, brewing, electric current and mineral product factories afforded considerably more employment than in the preceding month. The only pronounced reductions were in iron and steel, which, however, did not decline as greatly as at the beginning of July of last year, and in leather, where the decrease affected practically the same number of workers.

factories, while wooden vehicle works were slacker. Expansion was indicated in all except the Prairie Provinces.

Plant Products, Edible.—Seasonal activity in fruit and vegetable canneries, together with additions to staffs in sugar, syrup, biscuit, chocolate and confectionery works accounted for an increase of 2,049 persons in the staffs of 306 employers making returns. They reported 26,928 workers on July 1. All provinces

Animal Products, Edible.—Dairies, meat slaughtering and packing and fish smoking and curing establishments recorded seasonal activity. The index number in this industry was higher than in the corresponding month of 1924. Statements were tabulated from 220 employers having 16,320 persons on their pay-rolls, as compared with 15,546 on June 1. All except the Maritime Provinces shared in the upward movement.

Leather and Products.—Continued losses were noted in the leather division, boot, shoe and tanning works being slacker. Firms in Ontario and Quebec released most of the 345 employees who were let out by the 196 leather manufacturers making returns in the Dominion. They employed 15,252 workers. A contraction of practically the same size took place on July 1, of a year ago, but the index number then was higher.

Lumber and Products.—The trend of employment in lumber mills continued to be upward; these seasonal gains largely exceeded those registered at the beginning of July, 1924, when employment was in less volume. A combined working force of 58,100 persons was recorded by the 739 manufacturers making returns, who had 54,934 employees in their last report. In addition to the gains in rough and dressed lumber mills, there was improvement in container factories and, on a smaller scale, in furniture and other wood using

shared to some extent in the upward movement. On July 1, 1924, much less extensive gains were noted and the index number was several points lower.

Pulp and Paper Products.—The production of pulp and paper provided work for a larger number of workers than in the preceding month and printing and publishing shops were also more fully engaged. The working force of the 458 reporting firms aggregated 52,258 persons, as against 51,415 on June 1. The largest increases were in Ontario, although improvement was recorded in all except the Prairie Provinces. A downward tendency was in evidence on July 1 of last year, and the index number then was slightly below its level on the same date of this year.

Rubber and Products.—Rubber factories in Ontario recorded increased activity, while elsewhere no general change was shown. Thirty manufacturers employed 12,405 workers, or 251 more than in their last report. Pronounced curtailment of operations was indicated on the same date in 1924, and the situation then was less favourable.

Textile Products.—Fluctuations in different divisions of the textile group resulted in a net increase of 25 persons in the staffs of the 522 firms making returns, who employed 67,961 workers on July 1. Cotton mills and headwear factories showed a falling off in numbers employed, while offsetting increases took place

in garment, woollen and other textile plants. Improvement was indicated in Ontario, while the tendency in Quebec was downward. Substantial shrinkage was noted on July 1, 1924, and employment then was in smaller volume.

Tobacco, Distilled and Malt Liquors.—Breweries and tobacco factories afforded increased employment, chiefly in Quebec. A combined working force of 12,371 persons was employed by the 102 manufacturers making returns, who had 12,119 workers in the preceding month. Although this increase is slightly smaller than that registered on the same date of last year, the index number was somewhat higher this year.

Clay, Glass and Stone Products.—Continued improvement was indicated in building material works, 114 of which employed 9,271 persons as compared with 8,798 on June 1. This expansion, which is considerably larger than that reported on July 1, 1924, took place mainly in Quebec, Ontario and the Prairie Provinces.

Electric Current.—Employment in electric current plants showed a further gain; 290 persons were added to the personnel of the 85 companies reporting, who had 12,493 persons on payroll on July 1. The bulk of the increase occurred in Ontario. Additions to staffs on a decidedly smaller scale were recorded on the same date of last year, when employment in this division was less active.

Iron and Steel Products.—As is usual at this time of year, there was a considerable decline in employment in iron and steel on July 1, although the shrinkage was considerably less than on the corresponding date in 1924. The index number then, however, was somewhat higher. According to returns from 646 manufacturers, they had 112,544 employees, or 3,080 less than in the preceding month. Rolling mills, railway car shops, automobile and steel shipbuilding establishments reported curtailment of operations, while the production of boilers, engines and tanks, agricultural implements, structural iron and steel and sheet metal goods afforded more employment. The tendency was downward in every province.

Non-Ferrous Metal Products.—Smelters and refineries were slacker, but heightened activity was noted in lead, tin, zinc and copper works. The payrolls of the 100 firms in the non-ferrous metal group whose statistics were tabulated included 10,790 workers, as against 10,707 in the preceding month. In the Maritime Provinces and Ontario there was improvement; on the other hand, reductions were noted in British Columbia. On July 1, 1924, employment in this division had decreased.

Mineral Products.—Continued increases were shown on the first of July, and the index number stood higher than at any time in last year or in 1923. Statements were received from 73 employers having 10,290 persons in their employ, or 147 more than on June 1. The gains took place largely in petroleum plants in Ontario.

Logging

After a brief recovery for river-driving operations at the beginning of June, employment soon resumed its downward trend, and the 204 reporting firms had 5,130 fewer employees on July 1 than in the preceding month. They reported 15,087 men. The largest losses were in Quebec and Ontario, but employment declined to some extent in every province. This contraction affected a larger number of workers than that noted on the same date of last year and the index number then was a few points above its present level.

Mining

Coal.—Slight improvement was registered in the western coal fields, while the strike in Nova Scotia continued to affect the situation there. The working forces of the 89 operators making returns aggregated 24,174 persons, as compared with 24,018 in the preceding month.

Metallic Ores.—Metallic ore mines, to some extent in Ontario but chiefly in British Columbia, afforded more employment than in the preceding month. Returns compiled from 46 companies showed that they had 14,054 men in their employ on July 1; this was 509 more than on June 1. The situation was slightly better than on the corresponding date of a year ago, when additions to staffs on a very much smaller scale were noted.

Non-Metallic Minerals, other than Coal.—Asbestos mining and quarrying were more fully engaged than in the preceding month, 391 workers having been added to the staffs of the 74 firms reporting. They employed 6,738 persons on July 1. The bulk of the gain took place in Quebec. A 5 per cent decline in personnel had been indicated on July 1, 1924, and the index number then was a good many points below its present position.

Communication

Telegraphs and telephones both reported increases, those in the latter being much larger than on telegraphs. The greatest improvement was in Ontario, although all provinces shared in the gains. Statements tabulated from 165 employers in the communication division showed that they had 23,215 workers as against 22,715 on June 1. Additions to staffs were also reported on July 1 of last year.

Transportation

Steam Railways—As is usual at this time of year, there was considerable expansion on steam railways, chiefly in Quebec, Ontario and the Prairie Provinces. The 101 employers making returns in this division had 75,044 persons on their payrolls, compared with 72,999 in the last report. A favourable tendency was also in evidence on July 1, 1924, and the index number then was higher.

Shipping and Stevedoring.—Water transportation and longshore work in the Maritime Provinces and Quebec afforded less employment than on June 1, while moderate improvement was shown in Ontario. The result was a reduction of 923 in the working forces of the 58 firms making returns in the Dominion, who employed 13,732 persons. Contractions on a much larger scale were registered on the same date of last year and employment then was slightly below its present level.

TABLE III—Index Numbers of Employment by Industries (January, 1920=100)

Industry	*Relative Weight	July 1, 1925	June 1, 1925	July 1, 1924	July 1, 1923	July 1, 1922	July 1, 1921
Manufacturing	55.1	89.1	88.3	87.7	93.6	84.2	80.9
Animal products—edible.....	2.0	105.4	101.3	101.3	94.9	97.4	92.8
Fur and products.....	-1	81.9	78.8	81.1	91.8	97.5	86.2
Leather and products.....	1.9	69.8	70.3	74.7	73.2	70.6	76.6
Lumber and products.....	7.3	116.2	109.1	111.9	121.0	113.3	99.3

All Industries	100.	96.8	94.5	95.9	99.5	91.1	87.5

* An explanation of term "Relative Weight" is given in the concluding paragraph of this article.

Construction and Maintenance

Building Construction.—This industry reported substantial gains on July 1; 313 building contractors increased their working forces from 23,404 in the preceding month to 25,949 on the date under review. Seasonal activity was indicated in all provinces. This expansion exceeded that noted on July 1, 1924.

Highway Construction.—The largest additions on record were registered on July 1, when 10,942 persons found employment on roads. Statistics were compiled from 114 employers who had 23,631 workers. A large share of this increase took place in the Maritime Provinces, although all districts except British Columbia showed improvement. Heightened activity was also apparent on July 1, 1924.

Railway Construction and Maintenance.—Further extension of operations, though on a smaller scale than on the same date of last year, was indicated in railway construction on July 1. The index number last year was higher. The most pronounced gains took place in Ontario and British Columbia. The working force of the 37 firms and divisional superintendents making returns aggregated 46,910, as against 43,971 on June 1.

Services

There was an increase of 922 in the staffs of the 175 employers reporting in the service group, who had 15,231 persons on the payroll. This gain, which approximates that indicated on the same date of last year, took place largely in summer hotels.

Trade

Practically no change on the whole was noted in trade; minor losses in wholesale establishments were nearly offset by small increases in retail stores. Reports were tabulated from 575 firms having 55,452 salespeople, or 18 less than in the preceding month. The situation is rather more favourable than on July 1, 1924, when employment had declined on a very much larger scale.

Table III gives index numbers of employment by industries as at the first of July and June, 1925, as compared with July 1 of the last four years. The columns headed "Relative Weight" in the tables in this article show the proportion that the number of employees reported in the indicated area or industry bears to the total number of employees reported in Canada by the firms making returns on July 1, 1925.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING JUNE 30, 1925, AS REPORTED BY UNIONS MAKING RETURNS

UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month, with consequent variations in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of local trade unions deals with the situation reported during the quarter ending June 30th, 1925. On April 30th the percentage of unemployment stood at 8.7. Since that time improvement has continued to be reported, and at the end of June the percentage of idleness was 6.1. In comparison with the corresponding months of last year the situation in April and June was less favourable, but in May improvement was indicated. The level of employment, however,

at the end of the quarter under review was only .3 per cent lower than at the close of the corresponding quarter of last year.

The accompanying chart shows the curve of employment as reported by trade unions by quarters from 1916 to 1920 inclusive, and by months from 1921 to date. Since the beginning of the year the curve has pursued a distinctly downward course, with but one interruption in the month of April, when more unemployment caused a slight upward projection.

During April improvement in comparison with the month of March was registered by unions in Nova Scotia, Ontario, Manitoba, Saskatchewan, and British Columbia, but the gains were slightly more than offset by the declines in the remaining provinces. Fishermen were more active as were also building tradesmen and transportation workers. In the mining and manufacturing divisions, however, reductions occurred.

In May, unions in all provinces except Nova Scotia, Saskatchewan and Alberta were more active than in April, and the declines in these

TABLE I.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edw. Island	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada

provinces were slight. The building trades showed decided improvement and the manufacturing, mining, transportation and fishing divisions also reported gains. Lumber workers and loggers too, were considerably more active.

During June, Nova Scotia, Quebec, Manitoba, Saskatchewan and Alberta unions all reported gains as compared with May, the most pronounced being in Alberta where improvement was general throughout the different industries. Workers in the manufacturing division were slightly better employed, and miners and transportation workers also reported gains. Slight reductions were shown in the building trades and employment for lumber workers and loggers also declined.

Table I summarizes the returns by provinces for each month since January 1921, and table III shows the percentages of unemployment reported in the different groups of industries also by months from January 1921.

The volume of unemployment in the manufacturing industries was nearly 8 points lower during April than in the same month of last year, due, to a great extent, to slackness in the garment trades, though textile, iron and steel and glass workers and printing tradesmen were also less active. Employment in the mining and lumbering industries declined considerably, and the fishing and transportation divisions showed curtailment. The building trades reported a very slight change for the better.

During May an increase in employment over May of last year was reported in the manufacturing industries, and in the building trades the situation was much more favourable. The transportation division registered a slight reduction and the lumbering and mining industries were slacker. Fishermen reported no unemployment.

TABLE III.—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing	Lumbering and logging	Mining	Manufacturing industries	Vegetable products	Pulp and paper products	Pulp and paper mills	Printing, publishing and lithographing	Wood products	Fibres, textiles and textile products	Textile workers	Garment workers	Hat, cap and glove workers	Animal products	Iron and its products	Non-ferrous metals	Clay, glass and stone products	Mineral products	Miscellaneous manufacturing industries	Building and construction	Transportation	Shipping and stevedoring	Steam railway operation	Local transportation	Communication	Telegraph operation	Telephone operation	Trade (retail shop clerks)	Services	Governmental	Miscellaneous	All occupations

Very little change was reported in the manufacturing industries during June as compared with the corresponding month of last year, the increase in employment being only .3 per cent. Printing tradesmen, textile, garment and glass workers reported contractions which were offset

by the gains for pulp and paper mill and iron and steel workers. A greater volume of employment was afforded building tradesmen. Transportation workers reported a small adverse change and lumber workers showed a

marked decline. Retail shop clerks registered a slight change for the better.

Table II, which accompanies this article shows the percentages of unemployment for the months of April, May and June for all

Canada and also by provinces for the month of June. For this month reports were received from 1,543 locals with an aggregate membership of 157,268 persons, of whom 9,578 or a percentage of 6.1 were unemployed.

EMPLOYMENT OFFICE REPORTS FOR JUNE, 1925

THE volume of business transacted by the offices of the Employment Service of Canada during the month of June, 1925, showed a slight decline from that of the preceding period, there being a decrease of five per cent in the average daily placements. An improvement, however, of over nine per cent was shown as compared with the average daily placements effected during the corresponding period a year ago.

The accompanying chart shows the trend of employment since January, 1923, as represented by the ratio of vacancies notified and

applications during the periods under review was 71.7 and 70.7, as compared with 69.7 and 68.8 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of June was 1,552, as compared with 1,535 daily during the preceding period, and with 1,563 daily during the corresponding period in 1924. Applications for work during the latter half of the month registered 1,493 daily, in contrast with 1,426 daily during the latter half of June a

placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, the computations being made semi-monthly. It will be noted that the curves of vacancies and placements in relation to applications showed a slight rise during the first half of June, and remained practically at the same level during the balance of the month. Though the level of the curve for vacancies was not quite so high as that registered at the close of June, 1924, that of placements was somewhat higher. The ratio of vacancies to each 100 applications was 77.6 and 76.8 during the first and second half of June, 1925, in contrast with the ratio of 75.1 and 80.9 during the same periods in 1924. The ratio of placements to each 100

year ago. Employers notified the service of a daily average of 1,204 vacancies during the first half and 1,146 during the latter half of the month under review, as compared with a daily average of 1,174 and 1,154 vacancies during the month of June, 1924. Vacancies offered to the Service during the latter half of May, 1925, average 1,149 daily. The Service effected an average of 1,113 placements during the first half of June, of which 767 were in regular employment and 346 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,096 daily, and with 1,090 daily during the first half of June, 1924. During the latter half of the month under review placements averaged 1,056 daily (740

regular and 316 casual), as compared with an average of 982 daily during the corresponding period a year ago.

During the month of June, 1925, the offices of the Service referred 28,316 persons to vacancies and effected a total of 27,069 placements. Of these the placements in regular employment numbered 18,819, of which 14,946 were of men and 3,873 were of women, while placements in casual work totalled 8,250. Opportunities for employment reported by employers numbered 20,125 for men and 9,210 for women, a total of 29,335. The number of applications for work was 38,017, of which 27,516 were from men and 10,501 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		Totals
	Regular	Casual	
1919 (10 months).....	268,001	37,904	305,905
1920.....	366,547	79,265	445,812
1921.....	280,518	75,238	355,756
1922.....	297,827	95,695	393,522
1923.....	347,165	115,387	462,552
1924.....	247,425	118,707	366,132
1925 (6 months).....	100,217	53,598	153,815

MARITIME PROVINCES

During June, 1925, the number of opportunities for employment listed at employment offices in Nova Scotia and New Brunswick was nearly 13 per cent less than in the preceding month, and about 4 per cent less than in the corresponding month of last year. In the latter comparison there was an increase in orders listed in New Brunswick offices, but this was more than offset by a reduced demand in Nova Scotia. Placements in Nova Scotia were 3 per cent less than in May, but 5 per cent greater than in June, 1924. In both comparisons increases were recorded in all industrial divisions except services and farming, the reductions in the latter being small. In New Brunswick placements were 10 per cent less than in May, but nearly 9 per cent higher than in June, 1924. In the former comparison a decreased demand for casual workers in the service group was responsible for the reduction, being offset in part by increases in railway construction and logging. Increased placements in the services group were responsible for the gains over June, 1924. During the month under review 368 men and 51 women were placed in regular employment by Nova Scotia offices, and 168 men and 80 women by offices in New Brunswick.

QUEBEC

There was an increase of over 8 per cent in the number of vacancies listed during June

over the preceding month, and nearly 43 per cent more than during June, 1924. Increases in placements were more than 2 per cent and 34 per cent respectively. When compared with May increases were recorded for vacancies in all industrial groups except construction and maintenance; the only reduction of note in placements also occurred in this group. All groups except logging, transportation and finance showed increases in vacancies and placements over June of last year. Industrial groups in which most of the placements were effected during the month under review were manufacturing, 171; logging, 140; farming, 108; construction and maintenance, 564; and services, 924. Placements in regular employment numbered 1,077 of men and 832 of women.

ONTARIO

Opportunities for employment were slightly higher during June than in May, orders received being over 1 per cent higher. There were nearly 7 per cent more orders received during the month under review than during June, 1924. The increases in the latter comparison were due to a greater demand for workers in all industrial groups except construction and maintenance. The most noteworthy increases were in the manufacturing industries, iron and steel, plant products and lumber products being the most active. Placements were about 1 per cent lower than in May, but nearly 6 per cent higher than in June, 1924. Placements effected by industrial groups were manufacturing, 1,661; logging, 1,016; farming, 1,337; mining, 117; transportation, 639; construction and maintenance, 2,792; services, 3,727; trade, 293; and all other 96. Of the placements under construction and maintenance, 1,425 were in railway and 1,062 in building. Of the service placements, 2,139 were of household workers, of whom 1,427 were in casual work. Placements in regular employment numbered 7,933, 6,743 male and 1,190 female workers.

MANITOBA

Orders received during June were over 12 per cent less than in May, and more than 4 per cent less than in June of 1924. Placements also showed the same reductions approximately. A decreased demand for female household workers was mainly responsible for the reduction in the former comparison, while fewer orders for railway construction and maintenance workers contributed largely in the comparison with June of last year. The industrial groups in which most of the placements were effected during the month were manufacturing, 141; farming, 666; construc-

tion and maintenance, 146; and services, 1,620. Placements effected in regular employment during the month numbered 806 of men and 593 of women.

SASKATCHEWAN

Vacancies listed during June were nearly 9 per cent less than during May, but nearly 13 higher than in June, 1924. Placements were more than 11 per cent lower than in May, but over 14 per cent higher than in June of last year. All industrial groups participated in the increases over June of last year, and a reduction in orders for farm hands, railway construction and maintenance workers, and female household workers was mainly responsible for the decrease from May. Industrial groups in which most of the placements were effected were farming 1,074; construction and maintenance, 565; services, 711; and manufacturing industries, 88. Placements in regular employment effected during the month totalled 2,006, 1,677 of men and 329 of women.

ALBERTA

Opportunities for employment were nearly 24 per cent lower in June than in the preceding month, but almost 28 per cent higher than in June, 1924. About 18 per cent fewer placements were effected during June than in May, and an increase of nearly 34 per cent was recorded over June of last year. The most important reductions from May occurred in farming, railway construction and maintenance, and services, counterbalanced in part by gains in mining, logging and transportation. All industrial groups except railway construction and maintenance participated in the increase over June of last year, the increase in farm orders being the most noteworthy. Industrial groups in which most of the workers were placed were manufacturing 209; farming 1,599; construction and maintenance 452; and services 791. Placements in regular employment numbered 2,298 of men and 403 of women.

BRITISH COLUMBIA

The number of vacancies listed during June was over 7 per cent greater than in May, but over 19 per cent less than during the corresponding month of last year. A heavy demand for farm workers, which was only partially satisfied during June of last year, was the cause of the decrease in the latter comparison. Placements were more than 7 per cent higher than in May, and nearly 3 per cent higher than in June of last year. The most noteworthy gains over May were in the manufacturing industries and farming. Industrial groups in which most of the placements

were effected were manufacturing, 581; logging, 278; farming, 622, transportation, 167; construction and maintenance, 734, of which 353 were in building construction; services, 1,005; and mining, 87. Placements in regular employment totalled 2,204, 1,809 of men and 395 of women.

Movement of Labour

During June, 1925, the offices of the Employment Service of Canada made 18,819 placements in regular employment, of which 10,685 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 966 were granted the Employment Service reduced transportation rate, 786 going to points within the same province as the despatching office and 180 to other provinces.

In Quebec 186 special transportation certificates were issued, 88 covering provincial transfers and 98 interprovincial. Of the former 52 were for construction labourers sent by the Quebec office, and 35 for mill labourers and one cook sent by the Montreal office to points within their respective zones. The interprovincial movement was made up of 86 bushmen and 12 mill labourers travelling from Montreal to Sault Ste. Marie. The Ontario offices granted 175 certificates, all but one of which were for persons transferred within the province. Of the provincial certificates Pembroke issued one to a lumber piler and 13 to labourers going to North Bay. Sudbury issued one to a checker travelling to Toronto. The Toronto office despatched 79 pulp cutters to Sudbury, 2 farm workers to Ottawa, one concrete finisher to Timmins, one chef and one bricklayer to North Bay, one electric welder to Sarnia and 2 crib men to Port Arthur. Fort William transferred one paperhanger, Sudbury 12 bushmen, 2 mill hands, 20 mine labourers and one edgerman and Port Arthur 35 bushmen and one farm labourer to points within their own zones. The one interprovincial transfer was issued by the Brantford office to a textile worker going to Winnipeg. The offices in Manitoba granted 264 certificates, 214 provincial and 50 interprovincial, all of which were issued by the Winnipeg office. Provincial certificates were granted to 34 farm hands, 11 farm household workers, 6 hotel workers and one cook going to points within the Winnipeg zone. In addition, 140 farm hands, 8 farm domestics, one waitress, 3 chambermaids, 2 kitchen maids, one section hand, one motor mechanic and two cooks travelled to Brandon and one carriage setter, one baker and 2 cooks to

*2 placements effected by offices since closed.

Dauphin. The interprovincial transfers included 34 farm labourers, 8 farm domestics, one bricklayer, and one cook going to points in Saskatchewan, and 3 cooks, 2 cedar-post cutters and one domestic to Port Arthur. The Saskatchewan transfers numbered 86, of which 82 were for persons going to points within the province and 4 to other provinces. Of the interprovincial transfers Regina sent 2 carpenters to Calgary, one timekeeper to Lethbridge and one farm worker to Brandon. The transfers within the province represented the movement of 67 farm hands and 7 farm household domestics to various points throughout the province, one hotel cook from Regina to Saskatoon, one hotel porter from Saskatoon to Prince Albert, one carpenter from Saskatoon to Regina, one carpenter from Moose Jaw to a point within that zone, 1 blacksmith from Saskatoon to a point within that zone, and Yorkton transferred 3 bricklayers to Saskatoon. The Alberta offices granted 160 special transportation certificates, 142 covering provincial transfers and 18 interprovincial. The interprovincial transfers included 13 mill hands sent to Prince George, one farm hand to North Battleford, and one farm housekeeper to Saskatoon, all from the Edmonton office. From Calgary 2 berry pickers were transferred to Vancouver and one farm worker to Saskatoon. Of the provincial certificates Calgary issued 3 to bushmen, 7 to farm workers, and one to a construction labourer, all going to points within the zone; 16 to farm workers, one to a waitress, one to a teamster, two to cooks and one to a blacksmith going to the Drumheller zone; one to a painter and 4 to elevator carpenters going to the Lethbridge zone; one to

a farm labourer and one to a farm housekeeper going to the Edmonton zone; and 2 to farm workers travelling to points in the Medicine Hat zone. Edmonton sent 37 farm workers, 7 cooks, 2 dishwashers, 38 miners, 14 bushmen, 2 labourers, and one lineman to points within its own zone. British Columbia offices issued 95 certificates, 86 provincial and 9 interprovincial. The interprovincial certificates were all issued by Vancouver, 5 to farm labourers going to Calgary, 3 to farm labourers going to Saskatoon, and one to an engineer going to Brandon. Of the provincial transfers New Westminster sent one miner and one hotel cook to Nelson. Prince George issued certificates to two carpenters, one pile driver foreman, one millman, one flunkey, 6 bushmen, 4 teamsters and 2 cooks, and Prince Rupert issued certificates to 8 miners and 3 lumber pilers, all travelling to points within their respective zones. From Vancouver one blacksmith's helper, one cook, 6 miners, 2 pole loaders, 4 labourers, 2 sawmill labourers and one crusherman were despatched to points within that zone, and one fireman and one cook to Prince George, one first aid man, one carpenter, 9 station men and 4 miners to Revelstoke, one blacksmith, 5 farm labourers, one miner, one accountant, two domestics and one orderly to Kamloops, 4 bricklayers, and one miner to Nelson and one salesman, 2 engineers, one waitress and 2 fruit pickers to Penticton.

Of the 966 workers who benefited by the Employment Service reduced transportation 494 were carried by the Canadian National Railways, 456 by the Canadian Pacific Railway and 16 by the Pacific Great Eastern Railway.

FRENCH NATIONAL ECONOMIC COUNCIL

THE French National Economic Council, which was set up by a Decree of January 16, 1925, held its first session on June 22, under the chairmanship of Mr. Painlevé, the Prime Minister. The constitution and functions of this Council were outlined in the March issue of the LABOUR GAZETTE, page 288. The Prime Minister stated that the Government intended actively to pursue its social programme, and went on to define as follows the powers and duties of the Council. By its composition, he said, the Council "should unite in a single group the various abilities and interests of the nation and should so far rise above partial views and individual pre-

occupations as to form as exact an image as possible of the economic and social forces of the nation. It is nothing more. It cannot, it must not, be a kind of economic Parliament. The Constitution is the only instrument which can deal with matters relating to government and the national sovereignty in general, and under the Constitution there are properly elected deputies who alone are entitled to speak and to decide on behalf of the nation. The Economic Council is a research body, and it is as such that it can and should play a most important part in the life of the nation. Employers' and workers' organizations alike have been unanimous in

their desire to be empowered to elect their representatives on the Council directly. There will thus be a regular system under which the duly qualified persons will be chosen by those elements in the nation which they are to represent. The members of the Council will be freely elected and should reflect the nation in general, and the combination of the interests which they will represent should lead to a more stable equilibrium, which will be in the general interest. . . The whole economic condition of the country will be the

subject of the National Economic Council's deliberations at a time when the destinies of the country are being settled, perhaps for many years."

The Council proceeded to elect its two vice-chairmen and a permanent committee of ten members. The vice-chairman elected were Mr. Léon Jouhaux, general secretary of the General Confederation of Labour, and Mr. Robert Pinot, delegate of the Union of Metal and Mining Industries and Vice-Chairman of the *Comité des Forges*.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1925

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter April to June, 1925, were approximately the same as during the corresponding quarter of last year, as although opportunities for employment were a little over one per cent lower, placements were more than three per cent higher. Industrial groups in which the noteworthy reductions in orders were recorded were logging, mining and construction and maintenance, with minor reductions in fishing, farming, transportation and finance. These reductions were almost offset by substantial increases in opportunities for employment offered in the manufacturing industries and services and by a small gain in the trade group. Fewer placements were made in logging, mining and services, but these reductions were counterbalanced by increased placements in the manufacturing industries and farming. A small change only was recorded in the remaining industrial groups. The accompanying table gives the vacancies and placements of the offices of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1925.

From the chart on page 818 which accompanies the article on the work of the employment offices for the month of June, it will be noted that the trend of the curves representing the ratio of vacancies and placements to applications, has been generally upward since last December and that although the level of vacancies was lower during the quarter under review than in the corresponding quarter of 1924 the ratio of placements to applications was higher. During the period

April to June of last year there were on an average 82 vacancies and 72 placements for each 100 applications for employment, as compared with 79 vacancies and 73 placements for each 100 applications during the period under review. The average number of applicants registered daily during April to June of this year was 1,636, and the daily averages of positions offered was 1,292, in contrast with daily averages of 1,603 applications and 1,309 vacancies during the corresponding quarter of 1924.

During the three months April to June, 1925, the offices of the Service reported that they had made 91,611 references to positions, and had effected a total of 87,790 placements, of which 61,074 were in regular employment and 26,716 in casual work. Of the placements in regular employment 50,183 were of men and 10,891 of women, while casual work was found for 14,288 men and 12,428 women. A comparison with the same period of 1924 shows that 85,083 placements were made, of which 60,000 were in regular employment and 25,083 in casual work. Applications for employment during the period under review were received from 89,579 men and 31,445 women, a total of 121,024, in contrast with the registration of 118,576 during the same period of 1924. Employers notified the Service during the second quarter of the current year of 95,548 positions, of which 67,046 were for men and 28,502 for women, as compared with 96,796 opportunities for work offered during the same period of 1924.

In another section of this issue will be found a report in detail of the transactions of the employment offices for the month of June.

BUILDING PERMITS ISSUED DURING JUNE, 1925, WITH CUMULATIVE REPORT FOR FIRST HALF-YEAR

THE value of the building permits issued in 60 cities in June was 4.2 per cent lower than in the preceding month, in accordance with the trend usually indicated at this time of year. In the more significant comparison with the same month of last year, however, there was a gain of 4.9 per cent. The aggregate for June, 1925, was \$14,651,613, for May, 1925, \$15,296,080, and for June, 1924, \$13,961,006.

Detailed statements were furnished by some 50 cities, which issued over 1,550 permits for dwellings estimated to cost approximately \$6,800,000 and nearly 2,900 permits for other buildings valued at about \$7,500,000.

In New Brunswick, Quebec, and British Columbia, the value of the permits issued in June was higher than in May. The gains of \$1,339,718 or 41.7 per cent in Quebec, and of \$139,105 or 322.3 per cent in New Brunswick, were most pronounced. Of the declines in the other provinces, that of \$1,942,739 or 23.6 per cent in Ontario was actually the largest, but

Saskatchewan registered the greatest proportional reduction, of \$255,249 or 39.2 per cent.

As compared with June, 1924, New Brunswick, Quebec, Ontario, Alberta and British Columbia recorded higher aggregates of building authorized. British Columbia reported an increase of \$309,896 or 16.4 per cent, but this was exceeded by the proportional gain of \$75,310, or 70.4 per cent, in New Brunswick. Nova Scotia showed the heaviest decrease of \$162,615 or 77.5 per cent.

Montreal, Toronto and Vancouver issued permits at a higher valuation than in either May, 1925, or June, 1924, while in Winnipeg the total exceeded that for the same month of last year, but was lower than in the preceding month. St. John, Westmount, Belleville, Guelph, Hamilton, London, York Township, Welland, Ford, Riverside, and Moose Jaw registered improvement in both comparisons.

Table I gives the value of the building permits issued in 60 cities during May and June,

1925, and June, 1924. The 35 cities for which records are available since 1910 are marked by asterisks.

Cumulative Record for First Six Months, 1920-1925

Table II is a record by provinces of the building permits issued in 60 cities during the first six months of each year since 1920; it also shows the totals for the years 1920-1924, the proportion that the six months' aggregates

bear to these totals, and the average index numbers of wholesale prices of building materials.

The 1925 aggregate of \$64,662,849 was 8.0 per cent higher than in the corresponding six months of 1924, 11.2 per cent and 9.1 per cent lower than in 1923 and 1922, respectively, and 16.6 per cent and 4.9 per cent higher than in 1921 and 1920, respectively. Building costs were distinctly lower in 1925 than in any other of the years under consideration.

TABLE II.—PROVINCIAL TOTALS OF BUILDING PERMITS ISSUED BY 60 CITIES DURING FIRST HALF-YEAR, 1920-1925.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the *LABOUR GAZETTE*. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Non-Metallic Mineral Products

GRANITEVILLE, QUEBEC.—QUARRY MASTERS, AND PAVING CUTTERS' UNION OF THE UNITED STATES OF AMERICA AND CANADA, LOCAL NO. 60.

The agreement in effect for the year 1924, summarized in the *LABOUR GAZETTE* for August, 1924, was renewed to be effective during the year 1925.

GANANOQUE, ONTARIO.—STREETS AND O'BRIEN, GANANOQUE, AND PAVING CUTTERS' UNION OF THE UNITED STATES OF AMERICA AND CANADA, LOCAL NO. 65.

Bill of prices in effect from April 1, 1925 to March 31, 1926.

Blocks $3\frac{1}{2}$ to $4\frac{1}{2}$ inches by $4\frac{1}{2}$ to 5 inches by 7 to 10 inches, \$35 per thousand with free air, price of any other size being adjusted by further agreement. For drilling stone by hand, 10 per cent shall be added.

Price for dimension or monumental stone shall be adjusted between both parties.

Tools and drinking water shall be supplied. Pay day shall be weekly.

Day work, 87½ cents per hour, 8 hours per day. If paving cutter cannot make standard rate of pay through rough stone or other cause, he shall be paid this hourly rate while such conditions prevail.

Only union men or those eligible to become so shall be employed. The Company shall not employ more men than they can keep in steady work.

A grievance committee shall say whether the stone is fit to be worked or not.

Notice of any desired change shall be given at least one month previous to the expiration of this agreement.

Manufacturing; Printing and Publishing

TORONTO, ONTARIO.—PUBLISHERS OF THE GLOBE, THE MAIL AND EMPIRE AND THE STAR, AND MAILERS' UNION NO. 5.

Agreement to be in effect from June 1, 1925 until June 1, 1927.

Wages per week, journeymen, day work, \$35; night work, \$35.50. Hours, eight per day, seven per night.

Extras, time and one-half for hour work with a minimum of four hours, but not more than a regular day's pay unless more than eight hours per day or seven hours per night have been worked. Overtime, time and one-half. Work on evening papers on holidays, double time.

If time is allowed for lunch it is to be taken in the men's time. Mailers on morning papers shall work after hours if required for the first hour at single price.

Differences shall be settled by local arbitration under the International Arbitration Contract. If negotiations for a new agreement should be unsuccessful, terms shall be fixed by arbitration as above.

LONDON, ONTARIO.—CERTAIN PUBLISHING FIRMS AND INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 133.

Agreement to be in effect from January 1, 1925, until October 31, 1928. Upon 30 days' notice prior to expiration of each year the wage scale may be considered for adjustment.

Only union members are to be employed.

Minimum wages per week: hand compositors, make-ups, proofreaders, day work, \$38; night work, \$41. One week's holidays with pay to each regular journeyman.

Wages are to be paid in cash, weekly.

Hours per week, five days of eight hours and one day of four hours, or six nights of seven hours (exclusive of lunch period in each case).

Split shifts (running from day into night hours), seven hours pay at night rates.

Work on Sundays and holidays, double time, but work not obligatory. This does not apply to regular hours specified for a night's work on newspapers beginning on or extending into the morning of a Sunday or holiday. The publishers agree to consider with the union changes that might be mutually satisfactory in night work or holidays.

Overtime, time and one-half. Employees called back to work shall be paid \$1 in addition to overtime and guaranteed two hours' work.

An office operating three or more machines must employ a machinist.

No employee shall work over the regular number of hours or days per week on newspapers where a competent substitute can be obtained.

One apprentice to four journeymen, one of whom is regularly employed in the composing room. Applicants shall be examined by the foreman and the local apprentice committee and by the joint committee on apprentices.

Scale of wages for apprentices: third year, 40 per cent of journeymen's scale, fourth year 55 per cent; fifth year, 70 per cent.

EDMONTON, ALBERTA.—EDMONTON JOURNAL, LIMITED, AND EDMONTON PRINTING PRESSMEN AND ASSISTANTS' UNION NO. 255.

Agreement to be in effect from May 28, 1925 until May 27, 1926.

No man shall work more than six days or nights in a week when a competent substitute can be obtained. Hours per week, 45; day shift, eight hours per day with a maximum of six on Saturday; night shifts, seven and one-half hours per night. Any time in excess of or not within specified hours shall be considered overtime.

Minimum wages per hour, journeymen pressmen, 94 cents for day work; \$1.00½ per hour night work. Foremen, \$5 per week above this scale.

Apprentices scale, first year, \$12 per week; second year, one-third of journeymen's scale; third year, one-half; fourth year, two-thirds; fifth year, three-quarters.

Overtime: an employee recalled without previous notice after having left shall receive one dollar in addition to overtime for actual labour preformed; but if the time is up and he has not left he shall be paid time and one-half as if no stoppage had occurred. Overtime, first three hours, time and one-half; thereafter, double time.

On legal holidays, five hours shall constitute a day's work. Dominion Day, Labour Day and Christmas Day shall be holidays with pay, and any work performed on them shall be paid for at holiday rate in addition to the day's pay. On the night shift, the morning of the holiday shall be the holiday for the shift.

Only union members shall be employed when available. The foreman must have a union card.

Differences shall be submitted to an arbitration committee of two representatives of the employer, two of the union and a fifth agreed on by them, provided dispute cannot be settled by conciliation. After two weeks, dispute shall be submitted to arbitration under the International Arbitration Agreement. Pending the final decision, work shall continue.

The agreement specifies the number of men to be employed on presses.

EDMONTON, ALBERTA.—JOB PRINTING OFFICES AND EDMONTON PRINTING PRESSMEN AND ASSISTANTS' UNION No. 255.

Agreement to be in effect from October 1, 1924 until September 30, 1925.

All employees shall be union men if sufficient can be furnished, otherwise employer may engage additional pressmen, who shall join the union.

No cylinder pressmen shall be allowed to feed his own press.

The minimum number of men and helpers to be employed on various presses is specified.

A joint standing committee shall be appointed to investigate the standard of crews in various offices, when requested to do so by either party. Failing the establishment of this committee the standard set forth in the agreement shall be applied.

Differences over wages and hours shall be submitted to an arbitration committee of one from each side and a third agreed upon by the two. Two weeks shall be allowed for settlement and work shall continue.

Hours, day work, forty-four per week; night shifts, forty-two hours per week, with 10 cents per hour over the prevailing day scale.

Overtime: an employee recalled without notice after having left the pressroom shall receive one dollar in addition to overtime pay for time worked; if recalled after working hours and before having left the pressroom, time and one-half as if no stoppage had occurred.

Overtime rate for first three hours, time and one-half; thereafter, double time. Overtime for certain holidays, double time for Dominion Day, Labour Day, Christmas Day and for Sunday work.

Minimum wage per hour: foremen, 95 cents; cylinder and offset pressmen, platen pressmen running four platens, 90 cents; platen pressmen running three platens, 85 cents; platen pressmen running two platens, 80 cents. Press feeders, from \$10.50 per week during first six months to \$18.50 per week during 7th six months.

Apprentice scale: from \$10.50 per week during first six months to \$18 per week during 6th six months, fourth year, half journeymen's scale; fifth year, two-thirds journeymen's scale.

SASKATCHEWAN.—THE LEADER PUBLISHING COMPANY, LIMITED, REGINA, THE STAR PUBLISHING COMPANY, SASKATOON, AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION No. 116.

Agreement to be in effect from May 26, 1925 until May 26, 1928 in Regina, and until May 1, 1928 in Saskatoon. The conditions are in effect by verbal agreement in Moose Jaw.

The union will co-operate with the employer in locating competent stereotypers. The employer will give preference to union members.

Hours per day, eight; per night, seven and one-half. No pooling of hours to be allowed.

One apprentice to each office, and one additional where four journeymen are employed.

Apprentice scale: per week, day work, \$17; night work, \$19; \$1.50 increase in rates every six months.

Where only one journeyman and one apprentice are employed, apprentice scale: per week, day work, \$19; night work, \$21; \$1.50 increase in rates every six months.

Wages per hour for journeymen: day work, 91½ cents; night work, \$1.04½. Foreman, not less than \$5 per week over journeymen.

Overtime, time and one-half for first four hours; thereafter, double time.

Dominion holidays, double time; other holidays, time and one-half; on morning newspapers, in lieu of overtime 5 hours shall constitute a night. Sundays, double time.

Men shall receive \$1 for a call-back with no previous notice.

The agreement protects employers against walkouts, strikes and boycotts; differences shall be submitted to an arbitration committee of three. Pending settlement, work shall be continued.

Manufacturing: Iron, Steel and Products

PRINCE RUPERT, BRITISH COLUMBIA.—CERTAIN LOCAL FIRMS AND THE INTERNATIONAL ASSOCIATION OF SHEET METAL WORKERS, No. 672.

Agreement to be in effect from June 1, 1925 until January 1, 1926.

If the union is unable to supply workers, non-union men may be employed temporarily.

Buildings on which work is done must have sheet metal work and roofing supplied and erected by a sheet metal contractor.

No work shall be done on buildings where union employees have withdrawn, or where there is indebtedness or unpaid wages.

Union members must work only as journeymen.

Wages per hour, \$1; junior members, 75 cents.

Differences shall be settled by a permanent joint committee, or by the general office of the union; no strike or lockout to take place pending an investigation.

Hours per day, eight; per week, forty-four.

One apprentice to three journeymen or less. One junior member to four journeymen or less.

Overtime until 9.30 p.m., time and one-half. Thereafter and Saturday afternoons, Sundays and holidays, double time. No work on Labour Day.

Manufacturing: Clothing

TORONTO, ONTARIO.—VARIOUS LOCAL FIRMS AND THE INTERNATIONAL UNION OF CLOTH HAT, CAP AND MILLINERY WORKERS, No. 41.

Agreement in effect from various dates in July, 1925 with 30 days' notice of change.

Both sides recognize that strikes and lockouts should be substituted by mediation.

Only union members are to be employed.

Hours per week, 44; overtime rate, time and one-half. No worker is to be discharged without sufficient cause or reason; nor before case has been before the board of adjustment to be formed of equal representation by both parties and an impartial chairman.

Workers must give one week's notice of leaving work. If union is unable to supply help employers may engage helpers, and same shall join the union after two weeks.

When full-time work cannot be supplied, available work shall be divided equally among the workers.

Employers are not to give out any work to non-union shops.

Overtime over 44 hours, time and one-half.

Manufacturing: Vegetable Foods, Drink and Tobacco

LETHBRIDGE, ALBERTA.—LETHBRIDGE BREWERIES, LIMITED, AND THE INTERNATIONAL UNION OF UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCAL No. 354.

Agreement to be in effect from June 1, 1925 until May 31, 1926, with 30 days' notice of change.

Only goodstanding members are to be employed, provided the union secretary can furnish them. Extra help may be employed by permit cards during busy season.

No member shall be discharged or discriminated against for upholding union principles.

Hours per week, from April to October inclusive, 48, $8\frac{1}{2}$ hours per day and $5\frac{1}{2}$ on Saturday. From November to March inclusive, 44 hours per week, 8 hours per day and 4 hours on Saturday.

Overtime rate, time and one-half, covering night shifts, overtime outside of regular hours (excepting work of second soaker operator), and work on Sundays and holidays.

Minimum wages: operating engineers, 79 cents per hour, and one week's holiday during the year, with pay. Machinists, 75 cents per hour; machinists' and pipefitters' helpers, not less than \$30 per week. Brewing and bottling department: first cellar and brewhouse men, not less than \$39 per 48 hour week and \$35.75 per 44 hour week.

First wash-house man, not less than \$36 per 48 hour week, and \$33 per 44 hour week. Helpers in cellar, brewhouse and wash-house, not less than \$34.50 per 48 hour week, and \$31.65 per 44 hour week.

Tight and slack barrel coopers; not less than \$38 and \$33.

New men not less than \$27 or \$24.75 per 48 or 44 hour week for first six months, and thereafter \$30 or \$27.50 excepting soft drink department.

Beer drivers, not less than \$140 per month. Teamsters not less than \$125 per month.

Hours per week 48 (exclusive of stable work).

Men in soft drink department to receive not less than \$24 or \$22 for a 48 or 44 hour week.

The company may put in apprentices in each department, to serve two years at not less than \$18 per week for first year and \$21 per week for second year.

Sickness shall be no excuse for discharge.

In case of lay-off men shall be laid off by seniority.

If slackness of business occurs during winter men may apply for leave of absence up to four months.

Prices are set for beer sold to employees for their own use and not for resale or for their friends.

Differences over transportation of the agreement shall be referred to a Board of Arbitration of two from each party and if necessary a fifth elected by them.

Materials shall be union made and union labels shall be used.

Construction: Buildings and Structures

PRINCE RUPERT, BRITISH COLUMBIA.—WORKING RULES OF THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS, LOCAL 510.

Rules in effect by verbal agreement from March 1, 1925, on 30 days' notice.

Hours per day, 8. Overtime, time and one-half; holidays, double time; no work on Labour Day except to save life or property.

Where engineers are required to raise steam before work day starts an hour's time will be allowed.

Wage scale: on clam shells, orange peels, loco cranes, and road rollers, derrick work and pile driving, \$8; dinkey engineers, pulsometers, pumps, aero cables, \$7; theatres, minimum \$6. Minimum rate per month for engineers in stationary plants, 2nd class, in charge, \$250; 2nd class, on watch, \$200; 3rd class, in charge, \$175; 3rd class, on watch, \$160; 4th class, in charge, \$160; 4th class, on watch, \$150. Oilers, \$135; firemen, \$130.

No member is to supply steam to an engine operated by a non-union engineer. Engineers on steel construction are to be paid iron workers' scale.

An engineer laid off before quarter time shall be paid for one quarter of the day, and so on for the following quarters.

Services; Personal and Domestic

VICTORIA, BRITISH COLUMBIA.—CERTAIN LOCAL EMPLOYERS AND THE INTERNATIONAL ALLIANCE OF HOTEL AND RESTAURANT EMPLOYEES, No. 459.

Agreement to be in effect from June 1, 1925 until June 1, 1926.

Six days' work to be considered a week. Weekly scale for cooks: eight hours per day; chefs, \$36; second fry, \$30; night cook, \$32.40; cook's helpers, \$19.90; dishwashers, \$18.

Scale for waiters: eight hours in twelve to constitute a day; \$18 per week; overtime, time and one-half; reliefs to receive standard scale.

Scale for waitresses: hours and overtime as for waiters; \$15 per week; short shifts, 35 cents per hour straight.

White lunches, cafeterias, etc.: hours as for waiters; wages per week, counter men, \$16; counter girls, \$12; pantry girls, \$12; bus girls, \$9.

Hotels: waitresses, 8 hour day, 6 day week, per month, with room, \$35; without room, \$45. In hotel dining rooms open all day, restaurant scale to apply.

All scales include meals while working. Fractions of an hour are to be paid for full hour.

In case of an emergency, inexperienced help can be employed, not more than one to a house; men, \$15 per week; girls, \$12 per week. After two months such help shall join the union as regular help.

The monthly reports of the Department of Immigration and Colonization on immigration into Canada for April, May and June have not yet been received by the Department. The report for the second quarter of 1925 based on these monthly returns cannot, therefore, appear until the next issue of the LABOUR GAZETTE.

FAIR WAGE CONTRACTS, JULY, 1925

DURING July the Department received for insertion in the *LABOUR GAZETTE* the following information relative to five fair wage contracts, all of which contain the usual fair wage clause as follows:—

All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof. Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

DEPARTMENT OF PUBLIC WORKS

Construction of harbour improvements at Port Stanley, Ontario. Name of contractors, William Bermingham and Son, Kingston,

Ontario. Date of contract, July 16, 1925. Amount of contract, unit prices. Approximate expenditure, \$173,635.

Delivery and placing of stone at the outer end of the breakwater at Souris, Prince Edward Island. Name of contractor, John E. Campbell, Summerside, Prince Edward Island. Date of contract, June 27, 1925. Amount of contract, \$11.35 per cubic yard. Approximate expenditure, \$34,050.

Dredging West River at Sheet Harbour, Nova Scotia. Name of contractors, The Halifax Dredging Company, Limited, Halifax, Nova Scotia. Date of contract, June 22, 1925. Amount of contract, Class "A" \$9 per cubic yard, scow measure. Class "B" 60 cents per cubic yard, scow measure.

Dredging harbour channel and slip at Owen Sound, Ontario. Name of contractors, Canadian Dredging Company, Limited, Midland, Ontario. Date of contract, June 29, 1925. Amount of contract, Class "A" \$6 per cubic yard, place measure. Class "B" 43 cents per cubic yard, place measure.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1925

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the family budget in terms of retail prices being slightly higher, while the Dominion Bureau of Statistics index number of wholesale prices was somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was \$10.49 at the beginning of July, as compared with \$10.44 for June; \$9.91 for July, 1924; \$10.17 for July, 1923; \$10.27 for July, 1922; \$10.96 for July, 1921; \$16.84 for July, 1920; \$16.92 for June, 1920 (the peak); \$13.00 for July, 1918; and \$7.42 for July, 1914. The cost of eggs, sirloin steak, potatoes, bacon and creamery butter was higher while salt pork, veal, lard, sugar and cheese cost less than in June. Including the cost of fuel and rent with that of foods the total budget averaged \$20.70 at the beginning of July as compared with \$20.67 for June; \$20.30 for July, 1924; \$20.65 for July, 1923; \$20.67 for July, 1922; \$21.53 for July, 1921; \$26.92 for July, 1920 (the peak); \$20.66 for July, 1918; and \$14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the importance of the commodities, declined slightly to 158.4 for July, as compared with 158.8 for June; 153.9 for July, 1924; 153.5 for July, 1923; 154.1 for July, 1922; 163.7 for July, 1921; 256.3 for July, 1920; and 199.5 for July, 1918. Forty prices quotations were higher, thirty-seven were lower and one hundred and fifty-nine were unchanged.

In the grouping according to chief component material four of the eight main groups advanced, two declined, while two were practically unchanged. The movement in the two groups which declined more than offset the changes in the four which were higher. The Vegetables and Their Products group was substantially lower, increases in the prices of rubber, potatoes and hay being more than offset by declines in grains, flour, sugar, imported fruits, tea and coffee. The Iron and Its Products group declined, due mainly to lower prices for steel billets. The groups which advanced were: Animals and Their Products, due mainly to higher prices for hogs, bacon, ham, butter, cheese and eggs; Fibres, Textiles and Textile Products, due to advances in cot-

ton and silk prices; Non-Ferrous Metals and Their Products, because of higher prices for copper, lead, silver, tin and zinc; and Wood, Wood Products and Paper. The Non-Metallic Minerals group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose consumers' goods were slightly higher, declines in flour, imported fruits, beef, mutton and sugar being more than offset by advances in bacon, ham, butter, cheese, potatoes, and eggs. Producers' goods were substantially lower. Prices of materials for the milling industry and for flour and cattle declined, while prices of materials for the textile, the leather and the metal working industries as well as for hogs and rubber advanced.

In the grouping according to origin both raw or partly manufactured goods and fully or chiefly manufactured goods declined, the former due mainly to lower grain prices, and the latter due mainly to lower flour prices. Domestic farm products declined, while articles of marine, of forest and of mineral origin advanced.

The index number of wholesale prices in Canada, published by the United States Federal Reserve Board, including thirty-three raw materials, twenty-eight semi-manufactured or producers' goods, and thirty-eight finished or consumers' goods, based upon prices levels in 1913 as 100, declined to 148 for June, as compared with 149 for May; 148 for April; 153 for March; and 145 for June, 1924. Grouped by origin, domestic goods declined, while imported goods was unchanged. Grouped by stage of manufacture, producers' goods and consumers' goods declined while raw materials were unchanged. Export goods were substantially lower.

The Canadian Bank of Commerce index of exports rose from 152.92 for June to 154.68 for July. That for imports fell from 163.97 for June to 162.09 for July. The combined index of both exports and imports showed practically no change, being 158.44 for June and 158.38 for July.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. This index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913, and has been calculated by months from

1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July of seventy-one staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.
